Some of the equipment covered under this category incorporates parts that tend to produce arcs or sparks and, therefore, when installed in commercial garages and gasoline dispensing and service stations, should be in areas or enclosures suitable for the purpose in accordance with the NEC. Products incorporating arcing or sparking parts located above 18 in. from floor level (i.e., in an area considered unclassified by the NEC) are provided with instructions which specify that the equipment is not to be installed in a recessed floor area. Products incorporating arcing or sparking parts located below 18 in. from the floor, such as dynamometers, are marked for use in a Class I, Division 2 location, or the equipment should be located where there is mechanical ventilation providing a minimum of four air changes per hour in accordance with Section 511.3 of the NEC. If the equipment is intended to be located below grade level, such as a pit, the product should be marked for Class I, Division 1, or should be located in an area with exhaust ventilation at a rate of 1 cfm/ft² of floor area at all times when the building is occupied or when vehicles are parked over the equipment. The exhaust should be taken from a point within 12 in. of the floor of the pit, in accordance with Table 514.2 of the NEC. In addition, consideration should be given to the surrounding area and its classification in accordance with the NEC. If reliance is placed on ventilation requirements, the installation instructions for the product should specify the necessary ventilation requirements, and the suitability of ventilation should be determined at the installation.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Automotive Voltage Indicator
- Communication Interface
- Computer
- Measurement Interface
- Tester

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

- Automotive lifts are covered under Automotive Lifts (BACL).
- Battery chargers are covered under Battery Chargers, Nonautomotive Type (BBML).
- Refrigerant recyclers and air conditioning charging stations are covered under Refrigerant Recovery/Recycling Equipment, Automotive (SCMA).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 201, "Garage Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory), together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS APPLIANCE ELECTRIC ACCESSORIES (JHYR)

GENERAL

This category covers electric accessories for use solely on or with gas appliances and that can be applied without alteration to the appliance. They are intended for household, commercial or industrial use in accordance with ANSI/NFPA 70, "National Electrical Code."

Electric accessories suitable for use in gas appliances but also suitable for use in electric and/or oil appliances are included under the category applicable to the specific accessory.

PRODUCT MARKINGS

Gas appliance electric accessories are marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

PRODUCT IDENTITY

The following product identity appears on the product:
Gas Appliance Electric Accessory
Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit (MBPR), Controls, Primary Safety (MCCZ) or Switches (MFHX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following:

- ANSI/UL 353, "Limit Controls"
- ANSI/UL 372, "Automatic Electrical Controls for Household and Similar Use - Part 2: Particular Requirements for Burner Ignition Systems and Components"
- ANSI Z21.20, "Automatic Gas Ignition Systems and Components"
- ANSI Z21.77/CSA 6.23, "Manually Operated Piezo-Electric Spark Gas Ignition Systems and Components"
- ANSI Z21.92/CSA 6.29, "Manually Operated Electric Gas Ignition Systems and Components"

The standard designation is noted in the individual certification reports.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gas Appliance Electric Accessory," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS DETECTORS, RESIDENTIAL AND RECREATIONAL VEHICLE (JKIS)

USE AND INSTALLATION

This category covers gas detectors intended to detect natural gas and LP-gas (propane) that may be present in residential buildings or recreational vehicles as a result of gas leaking from gas-fired equipment. These devices are intended to sound an alarm at or below 25% of the lower flammable limit of natural gas or LP-gas (propane).

GAS DETECTORS, RESIDENTIAL AND RECREATIONAL VEHICLE (JKIS)

Installation limitations, if any, are marked on the device. Reference should also be made to the manufacturer's installation and use instructions accompanying the product.

These devices are not suitable for installation in hazardous (classified) locations as defined in ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Residential Gas Detector" or "Recreational Vehicle Gas Detector."

FACTORS NOT INVESTIGATED

These devices have not been investigated for use as smoke or fire detectors.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Emergency Signaling Equipment
Emergency Signaling Equipment Subassembly
Type E (for Emergency Signaling Equipment)
Type E Subassembly (for Emergency Signaling Equipment Subassembly)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1484, "Residential Gas Detectors."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Emergency Signaling Equipment" or "Emergency Signaling Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- E - Emergency Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS AND VAPOR DETECTION EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (JLVV)

USE

This category covers gas and vapor detectors and associated equipment used for detecting specific gases and vapors that may be present in the atmosphere incidental to operations or from accidental release and for determining the extent of such release. They may be (1) of the portable type powered by batteries, (2) intended for permanent installation in accordance with ANSI/NFPA 70, "National Electrical Code," or (3) intended for installation in panel assemblies in accordance with the instructions provided.

These gas and vapor detectors have been investigated for risk of explosion, fire and electric shock only. They have not been investigated for performance relative to their ability to detect gases or vapors.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referred to in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**GAS AND VAPOR DETECTION EQUIPMENT FOR USE IN
ZONE CLASSIFIED HAZARDOUS LOCATIONS (JLVV)**

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**(COMBUSTIBLE) GAS DETECTOR
ONLY AS TO INTRINSIC SAFETY**

or

**(COMBUSTIBLE) VAPOR DETECTOR
ONLY AS TO INTRINSIC SAFETY**

or

**(COMBUSTIBLE) GAS DETECTOR
AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS
ONLY**

or

**(COMBUSTIBLE) VAPOR DETECTOR
AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS
ONLY**

The word "COMBUSTIBLE" is optional

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY*] FOR USE IN HAZARDOUS LOCATIONS
ONLY AS TO INTRINSIC SAFETY
Control No.**

or

**[PRODUCT IDENTITY*] FOR USE IN HAZARDOUS LOCATIONS
AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS
ONLY
Control No.**

* **(COMBUSTIBLE) GAS DETECTOR** or **(COMBUSTIBLE) VAPOR DETECTOR** (the word "Combustible" in the product identity is optional)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**GAS AND VAPOR DETECTION
EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (JTNQ)**

**GAS AND VAPOR DETECTION EQUIPMENT
ENCLOSURES FOR USE IN HAZARDOUS
LOCATIONS (JTOL)**

USE

This category covers enclosures intended for use in one or more of the following hazardous locations, as indicated on the individual product, in accordance with ANSI/NFPA 70, "National Electrical Code": Class I, Groups A, B, C and D; Class II, Groups E, F and G.

This category covers only the enclosures. Gas sensors or other devices that may be contained within these enclosures are not covered under this category.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

PRODUCT IDENTITY

The following product identity appears on the product:

Enclosure for Use in Hazardous Locations

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1203, "Explosion-Proof and Dust-Ignition-Proof Electrical Equipment for Use in Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO EXPLOSION AND FIRE HAZARDS ONLY

**GAS AND VAPOR DETECTION EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (JTNQ)**

**Gas and Vapor Detection Equipment Enclosures for Use in
Hazardous Locations (JTOL)—Continued**

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**ENCLOSURE FOR USE IN HAZARDOUS LOCATIONS
AS TO EXPLOSION AND FIRE HAZARD ONLY**

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**GAS AND VAPOR DETECTION EQUIPMENT
CLASSIFIED FOR USE IN HAZARDOUS
LOCATIONS (JTPD)**

USE AND INSTALLATION

This category covers gas and vapor detectors and associated equipment designed for detecting specific gases and vapors that may be present in the atmosphere, incidental to operations or from accidental release, and for determining the extent of such release. They may be (1) of the portable type powered by batteries, (2) intended for permanent installation in accordance with ANSI/NFPA 70, "National Electrical Code," or (3) intended for installation in panel assemblies in accordance with the instructions provided.

These detectors have been investigated for risk of explosion, fire and electric shock only. They have not been investigated for performance relative to their ability to detect gases or vapors.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Combustible-gas Detector for Use in Hazardous Locations
- Combustible-vapor Detector for Use in Hazardous Locations
- Gas Detector for Use in Hazardous Locations
- Vapor Detector for Use in Hazardous Locations

The words "Hazardous Locations" may be abbreviated "Haz. Loc." or "Haz. Locs."

RELATED PRODUCTS

Gas detectors investigated for their performance relative to their ability to detect gas are covered under Gas and Vapor Detection Equipment Listed for Use in Hazardous Locations (JTPX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO INTRINSIC SAFETY ONLY

or

**AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS
ONLY**

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

The words "Hazardous Locations" may be abbreviated "Haz. Loc." or
"Haz. Locs."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS AND VAPOR DETECTION EQUIPMENT LISTED FOR USE IN HAZARDOUS LOCATIONS (JTPX)

GENERAL

This category covers gas and vapor detectors and associated equipment intended for detecting specific gases and vapors that may be present in the atmosphere incidental to operations or from accidental release and for determining the extent of such release. They may be (1) of the portable type powered by batteries, (2) intended for permanent installation in accordance with ANSI/NFPA 70, "National Electrical Code," or (3) intended for installation in panel assemblies in accordance with the instructions provided.

Gas and vapor detectors in any of the groups under Class I hazardous locations have been tested with respect to safety of operation of the instrument in the presence of flammable and explosive mixtures of representative gases and vapors with air. The flame arresters provided in the intake and suction lines of these instruments have been tested in the presence of flammable and explosive mixtures representative of the gases and vapors that the instruments are designed to detect and of the hazardous locations for which the detector has been certified. Associated equipment may not necessarily be suitable for use in hazardous locations.

These instruments, when installed, maintained and operated in compliance with the manufacturer's instructions, indicate the percentage of concentration or percentage of the lower flammable limits of the specific gases and vapors. In some cases, meter readings must be interpreted in accordance with calibration data furnished by the manufacturer.

Gas and vapor detectors should be calibrated and inspected by the operator in compliance with the manufacturer's instructions, as performance of the instruments will depend on proper maintenance. The instruments should be calibrated with known gas- or vapor-air mixtures at intervals, and particularly after replaceable sensors incorporated in the detecting unit are replaced. Certain gases and vapors may adversely affect (poison) the sensors, and the use of the instruments in sampling atmospheres containing gases or vapors for which they have not been previously calibrated should, therefore, be avoided.

Minor variations in the flow of sample aspirated to the detecting unit do not affect the operation of these instruments to any great extent. However, as the instruments become inoperative in the event of clogging of sampling lines, flame arresters or filters, precautions should be taken to keep these components clean and free from obstructions. Where condensation of vapors occurs in the detecting unit, or in the sampling lines and fittings, erroneously low indications by the instrument may result. Absorption of appreciable amounts of certain gases and vapors by nonmetallic tubing used as sampling lines may also result in incorrect indications by the instrument.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Combustible-gas Detector for Use in Hazardous Locations
- Combustible-vapor Detector for Use in Hazardous Locations
- Gas Detector for Use in Hazardous Locations
- Vapor Detector for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ), in addition to ANSI/ISA-12.13.01, "Performance Requirements for Combustible Gas Detectors," or ANSI/ISA 60079-29-1, "Explosive Atmospheres – Part 29-1: Gas Detectors – Performance Requirements of Detectors for Flammable Gases."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

**GAS AND VAPOR DETECTION EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (JTNQ)**

Gas and Vapor Detection Equipment Listed for Use in Hazardous Locations (JTPX)—*Continued*

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "(Combustible) Gas Detector for Hazardous Locations" or "(Combustible) Vapor Detector for Hazardous Locations," or other appropriate product name as shown in the individual Listings. The word "Combustible" in the product name is optional.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GENERATORS (JZGZ)

GENERAL

This category covers electric generators (also referred to as generator heads) capable of 40 kW or more continuous rated output. They are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS/INSTALLATION INSTRUCTIONS

An enclosed-type generator has the enclosure type designation marked on the generator for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). The generator may also be marked "Raintight" or "Rainproof."

An enclosed-type generator is not intended to be installed in an enclosure unless a marking on the generator, the installation instructions, or a stuffer sheet provided with the generator states that the generator may be enclosed. Specifications for the enclosure are included with the instructions or marking.

An open-type generator is intended to be installed in an enclosure suitable for the end use. The minimum size of the enclosure is marked on the generator, provided in the installation instructions, or as a stuffer sheet provided with the generator.

A generator that has running heating and locked-rotor protection is marked "Thermally Protected."

Generators are marked for use in a 40°C (104°F) or higher ambient.

All generators are provided with installation instruction information, which indicate the proper methods to secure the generator, electrically connect the generator to the prime mover, and connect it to the generator drive. The instructions also provide information concerning the load rating at which the generator can operate.

FIELD-EVALUATED PROVISIONS

Suitability of guards for the shaft or other moving parts must be determined in the end-use application.

If a generator does not have thermal protection as described above, protection needs to be provided in the end-use application such as an overload relay. The generator has a marking indicating that the generator is not provided with thermal protection.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Electric Generator
- Electric Generator Head

RELATED PRODUCTS

Electric generators for use in marine applications are covered under Alternators, Generators and Motors, Electric, Marine (ARDY).

Electric generators for use in hazardous (classified) locations are covered under Generators for Use in Hazardous Locations (PSP1).

Electric generators used in combination with an engine for use with recreational vehicles are covered under Engine Generators (FISR).

Motor generator sets and frequency converters intended for use in unclassified locations are covered under Motor-Generator Sets (PQYW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1004-1, "Rotating Electrical Machines – General Requirements," and ANSI/UL 1004-4, "Electric Generators."

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to ANSI/UL 840, "Insulation Coordination Including Clearances and Creepage Distances for Electrical Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUND-FAULT CIRCUIT INTERRUPTERS (KCXS)

GENERAL

This category covers ground-fault circuit interrupters (GFCI) for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

A GFCI is a device whose function is to interrupt the electric circuit to the load when a fault current to ground exceeds some predetermined value that is less than that required to operate the overcurrent protective device of the circuit.

GFCIs are intended to be used only in circuits where one of the conductors is solidly grounded.

Class A GFCIs trip when the current to ground has a value in the range of 4 through 6 mA. Class A GFCIs are suitable for use in branch and feeder circuits, including swimming pool circuits. However, swimming pool circuits installed before local adoption of the 1965 NEC may include sufficient leakage current to cause a Class A GFCI to trip.

GFCIs of the enclosed type that have not been found suitable for use where they will be exposed to rain are so marked.

The "TEST" and "RESET" buttons on the GFCIs are only intended to check for the proper functioning of the GFCI. They are not intended to be used as "ON/OFF" controls of motors or other loads unless the buttons are specifically marked "ON" and "OFF." Products with "ON" and "OFF" markings have been additionally covered under Motor Controllers, Mechanically Operated and Solid-state (NMFT).

Receptacle GFCIs

Some GFCIs include flush receptacles and are intended to be installed in an outlet box for fixed installation on a branch circuit similar to a conventional receptacle.

Receptacle-type GFCIs for use in wet and damp locations in accordance with Articles 406 of the NEC are identified by the words "Weather Resistant" or the letters "WR" where they will be visible after installation with the cover plate secured as intended.

Weather-resistant receptacle-type GFCIs installed in wet locations are intended to be installed within an enclosure that is weatherproof, whether or not the attachment plug cap is inserted.

Receptacle-type GFCIs intended for use where tamper-resistant receptacles are required by the NEC are identified by the words "Tamper Resistant" or the letters "TR" located where they will be visible after installation with the cover plate removed.

Receptacle-type GFCIs that have additionally been found to meet appropriate receptacle requirements are marked "Hospital Grade" and/or "CO/ALR."

Receptacle-type GFCIs with receptacles rated 15 or 20 A that are provided with more than one set of terminals for the connection of line and neutral conductors are suitable for through wiring on 20 A branch circuits.

The standard horsepower ratings for specific general-use receptacle configurations are also applicable to the receptacle portion of a GFCI employing the same receptacle configuration.

See Receptacles for Plugs and Attachment Plugs (RTRT) for further information.

Portable GFCIs

This category also covers portable GFCIs. These are plug-in type ground-fault circuit interrupters provided with male blades or an integral power-supply cord for connection to a receptacle outlet. Portable GFCIs are also provided with one or more receptacle outlets located on the GFCI or on a cord-connector body at the end of a length of flexible cord.

Only devices identified as "Portable GFCIs" are constructed so that either:

1. GFCI protection is also provided, or
2. the device interrupts power to the load, when any single supply conductor, including the neutral conductor, is opened. This feature maintains protection to the user in the event that continuity of a supply conductor is lost as a result of wear in the receptacle to which the device is connected, or if the integral power-supply cord to the GFCI is damaged.

Self-contained GFCIs

Self-contained GFCIs are provided with a complete enclosure intended to be permanently attached to the mounting surface, and a means of permanent connection to the supply conductors. They may be provided with one or more receptacle outlets or a means for permanent connection of the load conductors.

All self-contained GFCIs intended for installation in a counter are suitable for installation in a kitchen or bathroom countertop. They are provided with one or more receptacle outlets. The outlets may be fixed or retractable for storage below the counter surface.

REBUILT PRODUCTS

This category also covers rebuilt or refurbished portable GFCIs that are rebuilt or refurbished by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt or refurbished portable GFCIs are rebuilt or refurbished to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt or refurbished portable GFCIs are subject to the same requirements as new portable GFCIs.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Ground-fault Circuit Interrupter
- Portable Ground-fault Circuit Interrupter

For rebuilt products, the word "Rebuilt" or "Refurbished" precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 943, "Ground-Fault Circuit-Interrupters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ground-fault Circuit Interrupter."

For portable GFCIs, the word "Portable" precedes the product name. For rebuilt products the word "Rebuilt" or "Refurbished" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPECIAL-PURPOSE GROUND-FAULT CIRCUIT INTERRUPTERS (KCYC)

USE

This category covers ground-fault circuit interrupters (GFCI) for use in applications where equipment grounding is provided or is required by ANSI/NFPA 70, "National Electrical Code" (NEC), or where the voltage to ground is greater than 150 V.

PRODUCT CHARACTERISTICS

These GFCIs trip when the current to ground has a value in the range of 15 through 20 mA. Let-go protection is not provided by the GFCI; however, a person touching the protected equipment and earth would have a low-impedance equipment grounding path in parallel with the person's body.

These GFCIs rely upon equipment grounding for let-go protection. The reliability of the grounding circuit may be demonstrated by a system that monitors the grounding path to the service and to the load, such that an unacceptable increase in the resistance of the grounding path will cause the circuit to be opened, or by some other method that demonstrates, by

Special-purpose Ground-fault Circuit Interrupters (KCYC)—Continued

investigation, that the grounding circuit is reliable or that faults are unlikely because of the level of insulation that is provided (double insulation).

CLASSES

These GFCIs are divided into classes based upon voltage rating and the quality of the grounding circuit. Some may be used in circuits where grounding is not provided to the load but double insulation is provided.

A Class C GFCI is intended to be used in circuits with voltage not exceeding 300 V AC to ground on any conductor. Class C GFCIs are intended to be used in circuits where reliable equipment grounding or double insulation is provided or is required by the NEC.

A Class D GFCI is intended to be used in circuits with one or more conductors over 300 V to ground, where specially sized reliable equipment grounding, to provide a low impedance path so that the voltage across the body during a fault does not exceed 150 V, is provided for the protected equipment in the system.

A Class E GFCI is intended to be used in circuits with one or more conductors over 300 V to ground but with conventional equipment grounding or double insulation provided for the protected equipment in the system. These GFCIs respond rapidly to open the circuit before the magnitude and duration for the current flowing through a person's body exceeds the limits for ventricular fibrillation.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Class C Ground-fault Circuit Interrupter, Special Purpose
- Class D Ground-fault Circuit Interrupter, Special Purpose
- Class E Ground-fault Circuit Interrupter, Special Purpose

RELATED PRODUCTS

For additional information, see Ground-fault Circuit Interrupters (KCXS) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 943, "Ground-Fault Circuit Interrupters," as modified by UL Subject 943C, "Outline of Investigation for Special Purpose Ground-Fault Circuit Interrupters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Class ___ Ground-Fault Circuit Interrupter, Special Purpose."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUND-FAULT CIRCUIT INTERRUPTERS FOR USE IN HAZARDOUS LOCATIONS (KCYN)

GENERAL

This category covers ground-fault circuit interrupters (GFCI) intended for use in accordance with ANSI/NFPA 70, "National Electrical Code." These devices are mounted in explosion-proof and/or dust-ignition-proof enclosures.

GFCIs interrupt the electric circuit to the load when a fault current to ground exceeds some predetermined value that is less than that required to operate the overcurrent protective device of the circuit.

GFCIs are intended to be used only in circuits where one of the conductors is solidly grounded.

Class A GFCIs trip when the current to ground has a value in the range of 4 through 6 mA. Class A GFCIs are suitable for use in branch and feeder circuits.

The "TEST" and "RESET" buttons on GFCIs are only intended to check for the proper functioning of the GFCI. They are not intended to be used as "ON" and "OFF" controls of motors or other loads unless the buttons are specifically marked "ON" and "OFF."

PRODUCT IDENTITY

GROUND-FAULT CIRCUIT INTERRUPTERS FOR USE IN HAZARDOUS LOCATIONS (KCYN)

One of the following product identities appears on the product:
Ground Fault Circuit Interrupter for Use in Hazardous Locations
Ground-Fault Interrupter for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 943, "Ground-Fault Circuit Interrupters."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ground Fault Circuit Interrupter for Use in Hazardous Locations" or "Ground-Fault Interrupter for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUND-FAULT SENSING AND RELAYING EQUIPMENT (KDAX)

USE

This category covers ground-fault-current-sensing devices, relaying equipment, or combinations of ground-fault-current-sensing devices and relaying equipment which operates to cause a disconnecting means to function at predetermined values of ground-fault current in accordance with ANSI/NFPA 70, "National Electrical Code."

This equipment is intended for use on single-phase circuits rated 600 V maximum, or three-phase circuits rated 600 V maximum, phase to phase.

This equipment is intended to provide ground-fault protection of equipment at services and feeders.

This equipment is intended to operate devices with shunt-trip coils, such as fused power-circuit devices, molded-case circuit breakers, molded-case switches and the like, which constitute the disconnecting means. It is necessary that ground-fault-sensing and relaying equipment be coordinated with a disconnecting device to prevent the disconnecting device from interrupting a fault current that exceeds the interrupting capability of the disconnecting means.

To aid the user in making the proper selection of disconnecting means and sensing and relaying equipment, the sensing and relaying devices are designated as Class I or Class II:

Class I ground-fault-sensing and relaying equipment does not incorporate means to prevent opening of a disconnecting device at any level of fault current. This Class is suitable for use with a disconnecting device that is capable of interrupting the maximum available fault current of the system on which it is used. Examples of such disconnecting devices are (1) circuit breakers or fused circuit breakers used within their interrupting ratings, (2) fused switches having integral means to prevent the switch from opening at levels of fault current exceeding the interrupting capability of the switch and thus permitting the fuses to clear the circuit, (3) fused switches having an interrupting capability not less than 12 times their amp rating and which are capable of interrupting the levels of fault current that may exist before the fuses open.

Class II ground-fault-sensing and relaying equipment incorporates means to prevent initiation of opening of the disconnecting device if the fault current exceeds the contact interrupting capability of the disconnecting device with which it is intended to be used, such as in the case of a fused switch that does not have an interrupting capability of at least 12 times its amp rating.

This category covers enclosed equipment and also open-type equipment intended for use in certified equipment such as panelboards, switchboards and the like, where the acceptability of the combination has been determined by UL.

**GROUND-FAULT SENSING AND RELAYING EQUIPMENT
(KDAX)**
PRODUCT MARKINGS

Ground-fault-sensing and relaying equipment is marked to indicate the maximum inrush and sealed current ratings of the output circuit. These values should be compatible with the ratings of the tripping coils of the associated disconnecting devices.

Ground-fault-sensing and relaying equipment is marked to indicate the maximum available fault currents it is capable of withstanding without damage.

Ground-fault-sensing and relaying equipment additionally covered under Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ) and not marked "Line" and "Load" are suitable for operation with a supply source connected to either side.

Ground-fault-sensing and relaying equipment not additionally covered under DIVQ has not been investigated for operation with a supply source connected to the load-side terminals unless identified as suitable for back-feeding.

PRODUCT IDENTITY

The following product identity appears on the product:

Ground-fault-sensing and Relaying Equipment

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1053, "Ground-Fault Sensing and Relaying Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ground Fault Sensing and Relaying Equipment."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**GROUNDING AND BONDING
EQUIPMENT (KDER)**
USE

This category covers bonding devices, ground clamps, grounding and bonding bushings and locknuts, ground rods, armored grounding wire, protector grounding wire, grounding wedges, ground clips for securing the ground wire to an outlet box, water-meter shunts, and similar equipment.

Some devices are to be assembled to wire using a special tool specified by the manufacturer. Such special tooling is identified by appropriate marking on or within the device shipping carton.

Armored Grounding Wire — Armored grounding wire consisting of a single corrosion-resistant copper, aluminum or copper-clad aluminum conductor within helically-formed steel armor is marked with the size of the conductor "Bare Armored Grounding Wire."

Ground Rods — Ground rods and pipe electrodes are suitable for use as grounding electrodes in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and are also suitable for use in installation of lightning protection equipment.

Ground rods are solid copper, solid stainless steel, copper-jacketed steel, stainless-steel jacketed, galvanized steel, and chemically charged. They are not less than 1/2 in. diameter and not less than 8 ft long and capable of being driven to a depth of 8 ft. If other than circular, they have a periphery not less than 1.6 in. and a minimum thickness of not less than 3/8 in.

Ground rods are marked with the rod length, and manufacturer's name and catalog number within 12 in. of the top of the rod.

The ground rods of a sectional ground-rod kit consisting of two four-foot sections of ground rods, a driving sleeve, and a ground rod coupling are marked with the manufacturer's name, catalog number, rod size and length, and "Sectional Ground Rod" within 12 in. of the top of each rod.

Ground-rod couplings are intended for connection of two ground rods and are suitable for direct burial.

Plate Electrodes — Plate electrodes are suitable for use as grounding electrodes in accordance with the NEC.

GROUNDING AND BONDING EQUIPMENT (KDER)

273

Plate electrodes are bare or conductively coated iron or steel, or solid uncoated nonferrous metal (other than aluminum).

Plate electrodes are marked with the manufacturer's name, trade name, or both.

Ground Clamps — Strap-type ground clamps are not suitable for attachment of the grounding conductor of an interior wiring system to a grounding electrode.

Ground clamps and other connectors suitable for use where buried in earth or embedded in concrete are marked for such use. The marking may be abbreviated "DB" (for "Direct Burial").

Ground clamps are also suitable for telecommunication applications, such as telephone, radio, CATV and the like, in accordance with Articles 800, 810, 820 and Section 250.94 of the NEC, in addition to those covered under Grounding and Bonding Equipment, Communication (KDSH).

Ground clamps intended for use with ground rods and/or pipe electrodes in accordance with the NEC are marked with the size of electrode and electrode grounding conductor with which the clamp is intended to be used. Clamps suitable for use on copper water tubing are marked "Copper Water Tubing," or the equivalent, preceded or followed by the size of tubing. Ground rods, pipe electrodes and water tubing trade sizes are stated in fractions, such as 1/2, 5/8, etc.

Ground clamps intended for use with re-bar are marked with the size of re-bar with which the clamp is intended. Re-bar sizes may be specified in fractions, such as 1/2, 5/8, etc., or a number, such as 3, 4, 5, etc., where the number represents the numerator of the fraction when stated in eighth-inch increments, e.g., 4 = 4/8.

Ground clamps intended for use on a brass hex fitting are marked "BF-X," where "X" is replaced by a numeric number, fraction, or range of numbers representing the fitting size.

Grounding and Bonding Bushings — Bonding bushings for use with conduit fittings, tubing (EMT) fittings, threaded rigid metal and intermediate metal conduit, or unthreaded rigid metal and intermediate metal conduit are provided with means (usually one or more set screws) for reliably bonding the bushing (and the conduit on which it is attached) to the metal equipment enclosure or box. They provide the electrical continuity required by the NEC at service equipment and for circuits rated over 250 V. Means for connecting a grounding or bonding conductor are not provided and if there is need for such a conductor a grounding bushing should be used.

Grounding bushings for use with conduit fittings, tubing (EMT) fittings, threaded rigid metal and intermediate metal conduit, or unthreaded rigid metal and intermediate metal conduit have provision for the connection of a bonding or grounding wire or have means for mounting a wire connector available from the manufacturer. Such a bushing may also have means (usually one or more set screws) for reliably bonding the bushing to the metal equipment enclosure or box in the same manner that this is accomplished by a bonding bushing. Grounding bushings provide the electrical continuity required by the NEC at service equipment and for circuits rated over 250 V. They may be used with or without a bonding or grounding conductor as determined by the bonding or grounding function that is intended to be accomplished.

Insulating throat liners in grounding or bonding bushings are suitable for temperatures of 150°C if they are black or brown in color. Unless otherwise marked, insulating throat liners of any other color are suitable for temperatures of 90°C.

Grounding and Bonding Locknuts — Grounding and bonding locknuts serve in a manner similar to grounding and bonding bushings except they do not provide abrasion protection for the conductor at the end of the conduit.

Grounding and Bonding Hubs — Grounding and bonding hubs are certified hubs (see DWTI) provided with a certified grounding or bonding locknut. They serve in a manner similar to grounding and bonding bushings except they are only for use with threaded rigid metal and intermediate metal conduit. Grounding hubs provide the electrical continuity required by NEC 250.92 at service equipment and the electrical continuity required by NEC 250.97 for circuits rated over 250 V.

Ground Clips — Ground clips are intended to be pressed on the flat surface of a square, rectangular, or octagonal box to hold a grounding conductor against the sidewall of the box. Ground clips are not intended for use with round boxes. Ground clips are typically used for connecting the grounding conductor of various wiring methods to outlet boxes or for connecting the bonding jumper from a receptacle, switch or other device to an outlet box.

Ground Mesh — The ground mesh consists of a copper wire mesh that is intended to be installed in ground or embedded in concrete and bonded to the grounding electrode system for the purpose of improving ground planes, such as an equipotential plane as described in Sections 547.2, 547.10 and 680.26 of the NEC. Ground mesh is not intended to serve as a required grounding electrode as described in Article 250 of the NEC.

Fittings — A fitting such as a hub, bushing or locknut intended to provide a raintight or liquidtight connection is marked "Raintight," "Type 3," "Type 3R," "Type 4" or "Wet Locations."

Water-meter Shunts — Consists of a 4 AWG or larger solid copper wire connected between two ground clamps that comply with requirements for such ground clamps.

Grounding Couplings — Grounding couplings are certified rubber-gasketed fittings (see VIZM) that have been additionally investigated for grounding/bonding in a 200 A maximum service-entrance capacity.

Exothermic Welding Systems — Exothermic welding connection systems consist of molds and materials needed to connect grounding conductors and bonding jumpers to other applicable parts by a process known as exothermic welding.

Miscellaneous Devices — Grounding and bonding equipment not specifically mentioned above, such as bonding locknuts, gaskets, grounding wedge lugs, adapters, grounding grids and the like, are investigated under the intent of the requirements in the standard.

PRODUCT MARKINGS

Some of the markings referred to above may be on a tag attached to the product.

Grounding and bonding devices are intended for use only with copper conductors unless they are marked "AL" or "AL-CU."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Bonding Equipment
- Bonding Jumper
- Ground Clamp
- Grounding Equipment

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Hospital grounding jacks and grounding cord assemblies are covered under Hospital Ground Jacks and Grounding Cord Assemblies (KEVX).

Equipment for grounding and bonding for telecommunication applications is covered under Grounding and Bonding Equipment, Communication (KDSH).

Grounding and bonding hubs may additionally be covered as a hub under Conduit Fittings (DWTI).

Swimming pool equipotential bonding kits that are only intended to provide an intentional conductive bond to the pool water in accordance with Section 680.26(C) of the NEC are covered under Swimming Pool and Spa Equipment, Miscellaneous (WDUT).

Grounding couplings are additionally covered under Fittings, Rubber Gasketed (VIZM).

Grounding and bonding equipment intended for use in PV systems is investigated in combination with the PV module/panel (see Photovoltaic Modules and Panels [QIGU]) to the applicable requirements for such products. Installation instructions provided with the PV system (see QIGU) identify the specific grounding and bonding device that has been investigated and intended for use with that system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 467, "Grounding and Bonding Equipment."

UL MARK

The Certification Mark of UL on the product, on a tag securely attached to the product or container, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, on a tag securely attached to the product or container, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Grounding Equipment," "Bonding Equipment," "Bonding Jumper," "Ground Clamp," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUNDING AND BONDING EQUIPMENT, COMMUNICATION (KDSH)

USE

This category covers grounding devices intended for use in telecommunication applications, such as telephone, radio, CATV and the like, in accordance with Articles 770, 800, 810, 820, 830 and Section 250.94 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Strap-type Ground Clamps — Strap-type ground clamps constructed of perforated or expanded metal are suitable for grounding conductor connections to electrodes for indoor telecommunications purposes only. Where permitted by the NEC, they are also suitable in both indoor and outdoor applications when used for bonding purposes only. Strap-type ground clamps are intended for use with pipe electrodes in accordance with the NEC and are marked with the size of electrode and electrode grounding conductor with which the clamp is intended to be used. Clamps suitable for use on copper water tubing are marked "Copper Water Tubing" or the equivalent, preceded or followed by the size of tubing. Pipe electrodes and water tubing trade sizes are stated in fractions, such as 1/2, 5/8, etc.

Protector Grounding Conductors — Protector grounding conductors are intended for the grounding of metallic members of a cable sheath or of a primary protector. The conductor may be copper, aluminum, copper-clad aluminum or copper-clad steel. They have a light olive gray or green covering of thermoplastic material having a thickness less than certified wire and are surface marked with the manufacturer's name, conductor size, temperature rating and the words "Protector Grounding Conductor." The tag, reel or carton is marked with the same information and additionally provides information such as material of the conductor, identified use to NEC 770, 800, 810, 820 and 830 applications, and any auxiliary information.

Intersystem Bonding Terminations — Devices that provide a means for connecting communications systems grounding conductors and bonding conductors at the service equipment or at the disconnecting means for buildings or structures supplied by a feeder or branch circuit.

CATV Bonding/Grounding Assemblies — An assembly usually consisting of CATV connector mounted on a plate together with a means of terminating a grounding or bonding conductor to the metal plate. There is no signal filtering or conditioning at the CATV connection.

PRODUCT MARKINGS

Some of the required markings may be on a tag attached to the product.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Ground Clamp – Comm
- Ground Clamp – Communication
- Intersystem Bonding Termination Ground Clamp
- Protector Grounding Conductor

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Strap-type ground clamps covered under Grounding and Bonding Equipment (KDER) are also suitable for use in applications as specified in this category.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 467, "Grounding and Bonding Equipment."

UL MARK

The Certification Mark of UL on the product, on a tag securely attached to the product or container, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, on a tag securely attached to the product or container, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ground Clamp – Communication" (or "Ground Clamp – Comm"), "Protector Grounding Conductor" or "Intersystem Bonding Termination Ground Clamp," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUNDING EQUIPMENT, NEUTRAL GROUNDING DEVICES, OVER 600 VOLTS (KDZC)

GENERAL

This category covers neutral grounding devices intended for use on systems having ac voltage ratings from 601 V to 38 kV. Neutral grounding devices are used for the purpose of controlling the ground current or the potentials to ground of an alternating-current system.

These devices are grounding transformers, ground-fault neutralizers, resistors, reactors, capacitors, or a combination of these. In addition, these devices may include current sensors, relays, audible and visual signaling and similar accessories.

PRODUCT MARKINGS

Devices suitable for outdoor use are marked "Outdoor."

Enclosures are marked to indicate the exposure category (A, B or C) for which they are intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; enclosures marked "Category C" are intended for use in areas accessible to qualified personnel only.

Devices covered under this category are marked with the following information: Name of manufacturer, serial number, name of device, type designation, impedance (except resistors), number of phases as applicable, rated current, rated frequency, rated time, rated voltage, BIL of line, indoor or outdoor service, weight, volume of oil (as applicable), instruction book number or equivalent.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Neutral Grounding Reactor
- Neutral Grounding Resistor

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/IEEE 32 (1972), "IEEE Standard Requirements, Terminology, and Test Procedure for Neutral Grounding Devices," and ANSI/IEEE C37.20.3 (2001), "Metal-Enclosed Interrupter Switchgear."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Neutral Grounding Resistor" or "Neutral Grounding Reactor," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEALTH CARE FACILITIES EQUIPMENT (KEVQ)

GENERAL

This category covers appliances, utilization equipment and construction materials which have been judged to be particularly applicable to a health care facility as defined by Article 517 of ANSI/NFPA 70, "National Electrical Code."

The general information under the specific categories indicate the areas in which the individual Listings are intended to apply in health care facility installations.

This equipment, unless otherwise indicated, is for installation in unclassified (ordinary) areas of health care facilities.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOSPITAL GROUND JACKS AND GROUNDING CORD ASSEMBLIES (KEVX)

USE

This category covers hospital ground jacks and mating grounding cord assemblies intended for use in hospital rooms or other in health care facilities to connect equipment to a patient grounding point or other appropriate reference grounding point.

The visible face of a grounding jack is green.

PRODUCT MARKINGS

The cover of a hospital grounding jack having a twist-to-lock configuration is marked "Locked - for Grounding" or "Twist to Lock - for Grounding."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Grounding Cord Assembly
- Grounding Jack

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

General equipment for grounding and bonding is covered under Grounding and Bonding Equipment (KDER).

Equipment for grounding and bonding for telecommunication applications is covered under Grounding and Bonding Equipment, Communication (KDSH).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 467, "Grounding and Bonding Equipment."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Grounding Jack" or "Grounding Cord Assembly," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ISOLATED POWER SYSTEMS EQUIPMENT (KEWV)

GENERAL

This category covers isolated power centers that incorporate complete assemblies of isolation transformers and one or more isolated secondary circuits terminated in integrally mounted grounding-type load receptacles in an overall enclosure, which are intended for use in health care facilities where it is considered desirable to minimize available leakage and short-circuit currents.

Line isolation monitors may be included in the assembly to indicate the "condition" of the isolated circuit and its connected components with respect to electrical ground.

Other distribution panels certified as isolated power panelboards incorporate the same features as described above except that they may be supplied with power from a separate isolation transformer. They are connected by an approved wiring method to remote receptacles located in operating rooms or other anesthetizing location areas of health care facilities.

Isolated Power Systems Equipment (KEWV)—Continued

This category also covers accessory equipment, such as terminal assemblies located in patient care areas.

PRODUCT IDENTITY

The following product identity appears on the product:
Isolated Power Systems Equipment

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1047, "Isolated Power Systems Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Isolated Power Systems Equipment."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ISOLATED POWER WALL MODULES (KEXS)

GENERAL

This category covers isolated power wall modular sections for use in, within, or as part of health care facilities, and may be part of a building structure. They are designed for permanent connection to the building wiring in accordance with Article 517 of ANSI/NFPA 70, "National Electrical Code" (NEC).

These sections incorporate factory-installed wiring and equipment comprising part of an isolated power system such as the components of an isolated power center or an isolated power panelboard, or accessory equipment such as terminal assemblies located in patient care areas. In addition, they may incorporate various combinations of gas outlets, lighting fixtures, elapsed-time indicators, clocks, intercommunication equipment, etc.

These sections do not contain any grounded power systems except those necessary for connection to the primary of an isolating transformer, if provided. Sections intended for use with grounded power systems are covered under Sections and Units (QOXX).

The pre-installed components and wiring of a prefabricated section may be concealed and, except for the branch-circuit connections, may not be accessible for inspection at the inspection site.

The isolated power wall module sections have not been investigated to determine conformance with one or more model building or plumbing codes. They have been investigated to determine compliance with the NEC. These wall modular sections are intended for installation subject to approval by the Authority Having Jurisdiction.

The maximum available leakage current to the enclosure and primary grounded circuit conductor from either isolated circuit conductor has been investigated to determine that it is less than 100 microamperes with no loads connected to the isolated circuit.

Fire hazard classification of the building materials used in the wall module sections, including the resistance of any plywood to delamination under fire exposure, has been investigated. The fire hazard classification of the building materials used in prefabricated assemblies has the following maximum ratings applied to the finished panel and to core material (if used) in comparison with asbestos cement boards as zero and untreated red oak lumber as 100:

- Flame-spread rating 75
- Smoke-developed rating 200

PRODUCT IDENTITY

The following product identity appears on the product:
Isolated Power Wall Module

RELATED PRODUCTS

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Isolated Power Wall Module."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREFABRICATED MEDICAL HEADWALLS AND MEDICAL SUPPLY UNITS (KEZR)

USE

This category covers prefabricated medical headwalls and medical supply units that are factory-built assemblies for use in, within, or part of health care facilities, and may be part of a building structure. These assemblies may incorporate pre-installed materials and certified equipment which is usually concealed and may not be accessible for inspection at the installation site. The certified equipment incorporated in these assemblies includes, but is not limited to, receptacles, switches, clocks, timing devices, patient monitors, vacuum stations and gas fittings.

These assemblies, including any field wiring for units that are not factory wired, are intended for installation subject to approval by the Authority Having Jurisdiction.

INSTALLATION CODES

Materials, including the methods used for the installation of electrical, mechanical, heating, and plumbing equipment included in these assemblies by the manufacturer of the assemblies, have been judged under UL requirements which are based on the National Electrical Code, National Fire Code, and Model Building, Plumbing and Mechanical Codes.

RATINGS

The fire hazard of building materials employed in the assemblies is judged to be no greater than that of ordinary lumber used in site-constructed buildings. Finished surfaces are of materials having flame-spread and smoke-developed ratings of 200 or less. Products with a rating less than 200 indicated in the individual certifications may be included as part of the product marking.

Structural requirements vary with type of building construction and occupancy, and stability is to a large measure dependent upon the attachment of the assemblies to field-erected or existing structures. Therefore, Authorities Having Jurisdiction should be consulted with respect to local requirements.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Dental Unit
- Medical Headwall
- Medical Supply Unit

Other proprietary descriptive product identities with further description where necessary may be used as shown in the individual certifications.

RELATED EQUIPMENT

Prefabricated assemblies for use in locations other than health care facilities are covered under Prefabricated Assemblies, Sections and Units (QOXX) and Wiring Assemblies (QOYZ).

ADDITIONAL INFORMATION

For additional information, see Health Care Facilities Equipment (KEVQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in ANSI/NFPA 70, "National Electrical Code."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

One Certification Mark is applied to each assembly.

HEALTH CARE FACILITIES EQUIPMENT (KEVQ)

Prefabricated Medical Headwalls and Medical Supply Units (KEZR)—Continued

Alternate UL Mark
UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name, such as "Medical Headwall," "Medical Supply Unit," "Dental Unit," or proprietary descriptive product name with further description where necessary.

One Listing Mark is applied to each assembly.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDICAL WASTE DISPOSAL SYSTEMS,
EQUIPMENT AND ACCESSORIES (KFCC)

GENERAL

This category covers products that neutralize or collect biological or medical waste as indicated by the manufacturer. These products are intended for use in hospitals, nursing homes, medical care centers, medical and dental offices, and similar professional health care facilities. They include, but are not limited to syringe destroyers, waste disposers and similar equipment.

Approval to market these products in the United States is regulated by the Federal Food, Drug, and Cosmetic Act, P.L.94-295, and 21CFR, Parts 800-895. UL's investigation is, therefore, limited to certification as to electrical shock, fire and mechanical hazards only. The environmental impact and health aspects associated with the use of these products and their ability to collect, identify, or neutralize biological and medical waste have not been investigated. This limitation is specified in the instruction manual for all products covered under this category.

Unless otherwise noted, these products have not been investigated for use in the presence of flammable materials. Equipment which has been investigated to determine its suitability for use in hazardous (classified) locations as defined by ANSI/NFPA 70, "National Electrical Code," may be found under the individual hazardous locations product categories.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Macerator
Syringe Destroyer
Waste Disposer

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Health Care Facilities Equipment (KEVQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 61010A-1, "Electrical Equipment for Laboratory Use: Part 1: General Requirements," and ANSI/UL 430, "Waste Disposers."

Equipment for use in patient environments as defined in IEC 60601-1-1, "Medical Electrical Equipment, Part 1: General Requirements for safety, 1. Collateral standard: Safety requirements for medical electrical systems" is also investigated to applicable requirements in UL 2601-1, "Medical Electrical Equipment, Part 1: General Requirements for Safety."

Equipment intended for household use is also investigated to the applicable requirements in UL 1431, "Personal Hygiene and Health Care Appliances."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY

HEALTH CARE FACILITIES EQUIPMENT (KEVQ)

277

Medical Waste Disposal Systems, Equipment and Accessories (KFCC)—Continued

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY]

AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES FOR USE IN HEALTH
CARE FACILITIES (KFCG)

USE

This category covers indoor-use power supplies having input ratings not more than 600 V, direct and alternating current, intended for use with professional medical and dental equipment in ordinary locations of health care facilities in accordance with ANSI/NFPA 70, "National Electrical Code."

Power supplies not provided with standard output receptacles are marked for use with the intended end-use equipment, the combination of which has been investigated for compliance with the relevant standards of this category as noted below. Consideration should be given for the combination of products to be investigated under Medical Equipment (PIDF).

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

FACTORS NOT INVESTIGATED

These products have not been investigated for the effects they may have on the systems or the equipment to which they are connected.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Dental Power Conditioner
Dental Power Supply
Health Care Facility Power Conditioner
Health Care Facility Power Supply
Hospital Power Conditioner
Hospital Power Supply
Medical Power Conditioner
Medical Power Supply

Other product identities may be used as shown in the individual certifications, preceded by "Hospital," "Health Care Facility," "Medical" or "Dental," as appropriate.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Power supplies not provided with standard output receptacles and not marked for use with intended end-use equipment are covered under Power Supplies, Medical and Dental (QQHM2).

Power supplies intended to isolate the secondary output from ground are covered under Isolated Power Systems Equipment (KEWV).

ADDITIONAL INFORMATION

For additional information, see Health Care Facilities Equipment (KEVQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1012, "Power Units Other Than Class 2," and UL 544, "Medical and Dental Equipment," or UL 60601-1, "Medical Electrical Equipment, Part 1: General Requirements for Safety."

Some certifications are based on UL 544 or UL 2601-1, "Medical Electrical Equipment, Part 1: General Requirements for Safety," instead of UL 60601-1. UL 2601-1 (2nd edition) is identical in content to UL 60601-1 (1st edition). Certifications based on UL 544 will be withdrawn as of January 1, 2010.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Power Supplies for Use in Health Care Facilities (KFCC)—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Supply," "Power Conditioner," etc., preceded by "Hospital," "Health Care Facility," "Medical" or "Dental," as appropriate.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEVISION/VIDEO EQUIPMENT FOR USE IN HEALTH CARE FACILITIES (KFCA)

GENERAL

This category covers power-operated television and video equipment intended for entertainment purposes in unclassified locations of health care facilities. Equipment suitable for use in oxygen-enriched atmospheres is so indicated in the individual certifications.

Entertainment centers consisting of combinations of a television receiver and a radio receiver and/or other audio or video equipment are investigated to the requirements for television equipment.

This category also covers accessory equipment, including carts, stands, supporting arms and/or wall-mounting brackets, intended for use with television and video equipment in health care facilities.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Health Care Facility TV
- Health Care Facility TV Stand
- Hospital TV
- Hospital TV Stand

Other product identities may be used as shown in the individual certifications, preceded by "Hospital" or "Health Care Facility."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1492, "Audio-Video Products and Accessories," or UL 6500, "Audio/Video and Musical Instrument Apparatus for Household, Commercial, and Similar General Use," or ANSI/UL 60065, "Audio, Video and Similar Electronic Apparatus - Safety Requirements."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "TV," "TV Stand," etc., preceded by "Hospital" or "Health Care Facility."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNINTERRUPTIBLE POWER SUPPLIES FOR USE IN HEALTH CARE FACILITIES (KFFG)

USE

This category covers indoor-use uninterruptible power supplies that may be portable, stationary or fixed. The equipment is rated not more than 600 V

Uninterruptible Power Supplies for Use in Health Care Facilities (KFFG)—Continued

ac, and is intended for use with professional medical and dental equipment in health care facilities in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

An uninterruptible power supply is used to provide alternating-current power to a load for a period of time marked on the unit in the event of a utility power failure. In addition, it may provide a more constant voltage and frequency supply to the load, reducing the effects of utility voltage and frequency variations.

Uninterruptible power supplies provided with nonstandard output receptacles are marked for use with the intended end-use equipment.

Unless marked "Essential Electrical System," these uninterruptible power supplies have not been investigated with respect to the requirements for essential electrical systems as defined in Article 517 of the NEC.

REBUILT PRODUCTS

This category also covers uninterruptible power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt uninterruptible power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt uninterruptible power supplies are subject to the same requirements as new uninterruptible power supplies.

FACTORS NOT INVESTIGATED

The investigation of a product covered under this category does not include the effects it may have on the system or equipment to which it is connected.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Dental Uninterruptible Power Supply
- Health Care Facility Uninterruptible Power Supply
- Hospital Uninterruptible Power Supply
- Medical Uninterruptible Power Supply

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1778, "Uninterruptible Power Supply Equipment," and UL 60601-1, "Medical Electrical Equipment, Part 1: General Requirements for Safety."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Uninterruptible Power Supply," preceded by "Hospital," "Health Care Facility," "Medical" or "Dental," as appropriate.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS FOR USE IN HAZARDOUS LOCATIONS (KFHT)

HEATERS, AIR FOR USE IN HAZARDOUS LOCATIONS (KFVR)

GENERAL

This category covers air heaters of the natural convection, radiant heating, and fan-assisted types. Heaters for surface mounting are intended to be installed in a horizontal position and should not be recessed, obstructed, or placed on or under shelves. Installation is intended to be in accordance with the instructions furnished with the heater.

PRODUCT IDENTITY

HEATERS FOR USE IN HAZARDOUS LOCATIONS (KFHT)

Heaters, Air for Use in Hazardous Locations (KFVR)—Continued

The following product identity appears on the product:
Air Heater for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 823, "Electric Heaters for Use in Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Heater for Hazardous Location."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL RESISTANCE HEAT TRACING CABLE SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (KGFR)

USE

This category covers heat tracing cable systems intended for pipe line or vessel heat tracing. A heat tracing system is composed of heat tracing cable and connection kits, which are used for connecting power, connecting multiple heat tracing cables, terminating cables or other product specific uses as described in the individual certifications.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Heat Tracing Cable Set for Use in Hazardous Locations
Heat Tracing Cable System for Use in Hazardous Locations
Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is IEEE 515 (2011), "The Testing, Design, Installation, and Maintenance of Electrical Resistance Trace Heating for Industrial Applications."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heat Tracing Cable Set for Use in Hazardous Locations," or "Heat Tracing Cable System for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS FOR USE IN HAZARDOUS LOCATIONS (KFHT) 279

HEATERS, INDUSTRIAL AND LABORATORY FOR USE IN HAZARDOUS LOCATIONS (KGIZ)

GENERAL

This category covers paint heaters, ovens, hot plates, and other types of heaters as described in the individual certifications.

In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use, the necessary instructions are marked on the equipment.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Industrial and Laboratory Heater for Use in Hazardous Locations
Industrial Heater for Use in Hazardous Locations
Laboratory Heater for Use in Hazardous Locations
Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 823, "Electric Heaters for Use in Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial and Laboratory Heater for Use in Hazardous Locations," "Industrial Heater for Use in Hazardous Locations" or "Laboratory Heater for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, MISCELLANEOUS FOR USE IN HAZARDOUS LOCATIONS (KGWX)

GENERAL

This category covers miscellaneous heaters, including immersion heaters, motor-enclosure space heaters, and heaters for compressed air and water hose reels.

PRODUCT IDENTITY

The following product identity appears on the product:
Heater for Use in Hazardous Locations
Other product identities may be used as shown in the individual certifications.

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 823, "Electric Heaters for Use in Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heater for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings. The words "Hazardous Locations" may be abbreviated "Haz. Loc."

PRODUCT CATEGORIES BY CATEGORY CODE

280 HEATERS FOR USE IN HAZARDOUS LOCATIONS (KFHT)

Heaters, Miscellaneous for Use in Hazardous Locations (KGWX)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE HEATERS FOR USE IN HAZARDOUS LOCATIONS (KHCM)

USE

This category covers surface heaters intended for pipeline or vessel heating.

PRODUCT IDENTITY

The following product identity appears on the product:

Surface Heater for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is IEEE 515 (2011), "The Testing, Design, Installation, and Maintenance of Electrical Resistance Trace Heating for Industrial Applications."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Heater for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (KHTG)

ELECTRICAL RESISTANCE HEAT TRACING CABLE SYSTEMS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (KIHP)

USE

This category covers heat tracing cable systems intended for pipe line or vessel heat tracing. A heat tracing system is composed of heat tracing cable and connection kits, which are used for connecting power, connecting multiple heat tracing cables, terminating cables or other product specific uses as described in the individual certifications.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Heat Tracing Cable Set for Use in Hazardous Locations

Heat Tracing Cable System for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is IEEE 515 (2011), "The Testing, Design, Installation, and Maintenance of Electrical Resistance Trace Heating for Industrial Applications."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

HEATERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (KHTG)

Electrical Resistance Heat Tracing Cable Systems for Use in Zone Classified Hazardous Locations (KIHP)—Continued

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heat Tracing Cable Set for Use in Hazardous Locations" or "Heat Tracing Cable System for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, INDUSTRIAL AND LABORATORY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (KIKU)

GENERAL

This category covers paint heaters, ovens, hot plates, and other types of heaters as described in the individual certifications.

INSTALLATION

In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use, the necessary instructions are marked on the equipment.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Industrial and Laboratory Heater for Use in Hazardous Locations

Industrial Heater for Use in Hazardous Locations

Laboratory Heater for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial and Laboratory Heater for Use in Hazardous Locations," "Industrial Heater for Use in Hazardous Locations," or "Laboratory Heater for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS AND HEATING EQUIPMENT (KKBV)

This category covers equipment rated up to 600 V intended for household, industrial or commercial installations.

These products have not been investigated for outdoor use unless they are marked "For Outdoor Use" or the equivalent, in which case they are acceptable for both outdoor and indoor use.

AIR HEATERS, MOVABLE AND WALL OR CEILING HUNG (KKPT)

USE AND INSTALLATION

This category covers cord-and-plug-connected air heaters of the natural convection and fan-assisted movable types, wall-hung (other than at the baseboard level), and ceiling-hung types.

Movable and wall- or ceiling-hung heaters are intended to act as sources of heat for the purpose of raising or maintaining the comfort level in a desired area.

Some movable and wall- or ceiling-hung heaters may present fire hazards if they come in contact with combustible materials, such as draperies, furniture, carpeting, bedding and the like, or if they are covered or blocked in any manner. In accordance with product markings and instructions for the user, such heaters should be placed so as to provide safeguards against such contact and should not be located where they can be covered or blocked, for example, at the baseboard level. Use that does not result in a fire hazard may still cause discoloration or scorching (but no glowing embers or flaming) of adjacent materials.

Certain air heaters subjected to the equivalent of a beating rain are considered to be acceptable for outdoor installation and are marked "Outdoor Use."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Ceiling-hung Heater
- Movable Fan-type Heater
- Movable Floor-mounted Air Heater
- Movable Heater
- Movable Radiant Glass Heater
- Wall- or Ceiling-hung Heater
- Wall-hung Heater

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Fixed and location-dedicated electric room heaters are covered under Air Heaters, Room, Fixed and Location Dedicated (KKWS).

Permanently-mounted heaters having provisions for drawing in outside air are certified as room fan heater units under Heating and Cooling Equipment (LZFE).

Portable baseboard heaters and accessories are covered under Baseboard Heaters (KLDR) and Baseboard Heater Accessories (KLQZ), respectively.

These heaters have not been investigated for their acceptability when used in confined areas and operated at elevated temperatures for heat treatment or steam and dry-bath applications. Steam and dry-bath units are covered under Steam Bath Equipment (KQBZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1278, "Movable and Wall- or Ceiling-Hung Electric Room Heaters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Movable Heater," "Movable Fan Type Heater," "Wall-Hung Heater," "Ceiling-Hung Heater," "Wall- or Ceiling-Hung Heater," "Movable Radiant Glass Heater," "Movable Floor Mounted Air Heater," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR HEATERS, ROOM, FIXED AND LOCATION DEDICATED (KKWS)

USE AND INSTALLATION

This category covers electric air heaters of the fixed and location-dedicated room type for residential, commercial and industrial applications. These heaters are of the radiant, natural convection and fan-assisted types intended for mounting in various positions, such as on or in a wall, (except at the baseboard level), on, in or suspended from a ceiling or inserted in a floor. Combination units that include lights have been investigated with regard to their suitability for use as fixtures. Commercial-industrial types include heaters intended to be suspended from a ceiling or wall, or to provide an air curtain in a doorway.

These air heaters are intended to act as sources of heat for the purpose of raising or maintaining the comfort level in a desired area. These units have not been investigated for their acceptability when installed in confined areas and operated at elevated temperatures for heat treatment or steam and dry-bath applications.

Some air heaters may present fire hazards if they come in contact with combustible materials, such as draperies, furniture, carpeting, bedding and the like, or if they are covered or blocked in any manner. Such heaters are intended to be installed as to provide safeguards against such contact and should not be located where they can be covered or blocked, for example, at the baseboard level. Installations that do not result in a fire hazard may still cause discoloration or scorching (but no glowing embers or flaming) of adjacent materials.

Certain room heaters have been investigated for outdoor use and are marked accordingly. All other heaters have been investigated for indoor installation only. The acceptability of such heaters when installed in semi-protected or otherwise shielded locations is determined by the Authority Having Jurisdiction.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use, suitable warnings and necessary special instructions are marked on the equipment.

PRODUCT IDENTITY

The following product identity appears on the product:

Room Heater

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Movable and wall- or ceiling-hung heaters are covered under Air Heaters, Movable and Wall or Ceiling Hung (KKPT).

Heaters having provisions for drawing in outside air are certified as room fan heater units under Heating and Cooling Equipment (LZFE).

Portable baseboard heaters and accessories are covered under Baseboard Heaters (KLDR) and Baseboard Heater Accessories (KLQZ), respectively.

Steam and dry-bath units are covered under Steam Bath Equipment (KQBZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2021, "Fixed and Location-Dedicated Electric Room Heaters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Room Heater," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BASEBOARD HEATERS (KLDR)

USE AND INSTALLATION

This category covers space heaters of the portable and permanently mounted types intended to be positioned or installed on or in the wall at the baseboard level, or on the floor.

Baseboard Heaters (KLDR)—Continued

Baseboard heaters have been investigated and found to incorporate suitable safeguards against establishment of fire hazards that might result from contact with draperies, furniture, carpeting, bedding and the like; however, discoloration or scorching (but no glowing embers or flaming) may result on adjacent materials.

Heaters, other than those marked to indicate that they are not for residential use, have been investigated to determine that the accessible surface temperatures are low enough to reduce the likelihood of burns from accidental contact.

Electrical cords, drapes, and other furnishings should be kept away from baseboard heaters. To reduce the likelihood of cords contacting the heater, the heater should not be located beneath electrical receptacles. Receptacle accessories for use with individual manufacturers' baseboard heaters are covered under Baseboard Heater Accessories (KLQZ).

Baseboard-mounted equipment consists of two types: (1) Complete units intended for individual mounting in specific locations, and (2) complete systems, which include accessories to enable the heating units to be interconnected around the perimeter of a room (see KLQZ). With reference to these systems, each manufacturer is required to furnish detailed instructions covering the assembly of the basic units and accessories, and indicating the method in which ground continuity is intended to be maintained between adjacent sections.

Electrical fittings are provided with each heater of a system to ensure ground continuity between adjacent units and to protect interconnecting wiring, unless investigation shows that standard fittings that are available in the field will accomplish the same result.

A system which is factory furnished with all interconnecting wiring, fittings, raceways, etc., to complete the installation is considered suitable for connection to a single-outlet branch circuit.

PRODUCT IDENTITY

The following product identity appears on the product:
Electric Baseboard Heater

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1042, "Electric Baseboard Heating Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Baseboard Heater."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Baseboard Heater Accessories (KLQZ)

USE AND INSTALLATION

This category covers accessories intended to be used in conjunction with individual manufacturers' certified baseboard heater systems (see KLDR). Accessories include wiring components for interconnection of individual units, corner, blank and filler sections, to facilitate perimeter installation, temperature-regulating components and other general- and special-use receptacle and switch components to be mounted in line with baseboard heater installations.

Attachment plug receptacle sections of baseboard heating systems provided for installation, together with the other components of baseboard air heating systems, are intended to be supplied by means of conventional wiring methods from separate branch circuits not interconnected with the heating system.

Combination transfer switch-receptacle sections of baseboard heating systems which permit use of either the heating system by itself, or a separate room air conditioner by itself, are intended to be connected to a single branch circuit of appropriate size.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CLOTHES DRYERS (KMEX)

USE AND INSTALLATION

This category covers clothes dryers intended for use only where water has been used as the cleaning agent. Unless specifically marked or indicated in the installation instructions, the clothes dryers are intended for freestanding installation with no spacing required between the back and any side to combustible wall surfaces, but are not intended to be operated in closets, alcoves, or other confined areas, nor stacking one unit above another.

A wall-insert clothes dryer is intended to be mounted permanently in a wall or other vertical surface of a building, or in a cabinet. A wall-insert clothes dryer is suitable for installation as a recessed clothes dryer, or as a freestanding clothes dryer.

A recessed clothes dryer is intended to (1) be supported by the floor, (2) rest against a wall in the rear, (3) rest against a wall, a cabinet, or another appliance on one side, and (4) rest against a cabinet or other appliance on the other side. If the design permits, a countertop may cover the clothes dryer and the adjacent cabinets and appliances. A recessed clothes dryer is not intended for permanent attachment to the building structure or to adjacent cabinets or appliances. A recessed clothes dryer is suitable for installation as a freestanding clothes dryer.

A clothes dryer intended to be installed in a closet should be installed in accordance with the marked required clearances to all adjacent surfaces and the required ventilation in the door.

Clothes dryers are provided with means of connection of the metallic parts of the enclosure to ground, and all clothes dryers intended for nominal 120-240 V three-wire operation may be provided with grounding facilities to permit the frame of the appliance to be connected directly to the neutral conductor in accordance with the provisions of ANSI/NFPA 70, "National Electrical Code" (NEC).

Motor-overcurrent protection is included in motor-operated dryers if adequate protection would not be provided by branch circuits to which they would properly be connected.

Clothes dryers, other than condenser-type clothes dryers, are intended to be connected to a clothes dryer exhaust duct to the outdoors. The maximum duct length and number of bends is intended to be in accordance with the clothes dryer installation instructions.

The operation of condenser-type clothes dryers is such that air from the heater of the dryer is circulated across the clothes and then across a condenser. The condenser transforms the vapor to water, which collects in a reservoir in the clothes dryer. As the vapor changes to a liquid, it carries the lint with it to an internal reservoir. The air that passes across the condenser then recirculates across the heater in the clothes dryer in a continuous operation until the clothes are dry. There is no venting of moisture/lint-laden air to the outside. All moisture/lint-laden air is continuously recirculated.

Provision should be made for the periodic removal of accumulation of lint that results from normal operation of this type of equipment.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in

Clothes Dryers (KMEX)—Continued

installation or use, the necessary special instructions are provided on or with the equipment. An individual branch circuit should be provided for each clothes dryer.

Certified clothes dryer transition ducts may be used to connect the clothes dryer to an existing permanent duct system provided as part of the building structure. certified clothes dryer ducts are covered under Clothes Dryer Transition Ducts (KMIK).

The burglary- and theft-protection features of coin-operated machines have not been investigated, unless specifically indicated by a marking on the machine.

PRODUCT IDENTITY

The following product identity appears on the product:
Clothes Dryer

RELATED PRODUCTS

Dryers other than electrically heated types are covered under Dryers (LEFZ), Gas-fired Clothes Dryers, Type 1 (LETA) and Gas-fired Clothes Dryers, Type 2 (LETX).

Combination washer-dryers are covered under Washing Machines (ZCTT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category that are intended for use by the general public within household and commercial installations, including appliances provided with coin-, ticket- or card-operated mechanisms, is ANSI/UL 2158, "Electric Clothes Dryers."

The basic standard used to investigate industrial- and institutional-type products in this category that are not intended for use by the general public is ANSI/UL 1240, "Electric Commercial Clothes-Drying Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Clothes Dryer Transition Ducts (KMIK)

USE

This category covers clothes dryer transition ducts intended for venting the exhaust air of electric and gas clothes dryers of household or commercial type.

These ducts are rigid or flexible metal types. Flexible types are a maximum 8 ft. long for use in single lengths only. These ducts are intended for use only in connecting a clothes dryer to permanent ducting provided as a part of the building structure.

These ducts are intended for installation in accordance with the installation instructions provided with the product.

PRODUCT IDENTITY

The following product identity appears on the product:
Clothes Dryer Transition Duct

ADDITIONAL INFORMATION

For additional information, see Clothes Dryers (KMEX), Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2158A, "Outline of Investigation for Clothes Dryer Transition Ducts."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**CONTROL PANELS, REMOTE, FOR
ELECTRIC DUCT HEATERS (KMLW)**

USE AND INSTALLATION

This category covers electrical panels incorporating control and/or overcurrent protective devices intended specifically for remote use with electric duct heaters. Overcurrent protective devices in these panels are intended to provide overcurrent protection in accordance with Section 424.22(C) of ANSI/NFPA 70, "National Electrical Code."

Unless otherwise specified in the manufacturer's installation instructions, these panels are intended to be mounted remote from the electric duct heaters, in a location where they will not be affected by heat or condensation from operation of the equipment.

The proper installation of these panels requires careful consideration of the individual manufacturer's installation instructions and wiring diagrams.

General-purpose panels are not limited to use with specific makes and models of electric duct heaters. These panels are provided with installation instructions and wiring diagrams showing supply connections, connections to the electric duct heaters, and control circuit connections to be completed at the time of installation.

Panels intended to be used only with specific certified equipment is so identified and the equipment marked to require the particular panel. The installation instructions and wiring diagrams for these panels may be provided with the panel or may be provided only with the certified electric duct heaters.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Control Panel for Specific Electric Space-heating Equipment — See equipment nameplate and installation instructions

General-purpose Control Panel for Electric Space-heating Equipment

RELATED PRODUCTS

General-purpose panels containing only overcurrent protective devices or only magnetically-operated switching devices are covered under Panelboards (QEUY) and Switches, Industrial Control (NRNT), respectively.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1996, "Electric Duct Heaters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Purpose Control Panel for Electric Space Heating Equipment" or "Control Panel for Specific Electric Space Heating Equipment — See equipment nameplate and installation instructions."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, COOKING APPLIANCES (KMSV)

Commercial Cooking Appliances (KNGT)

USE AND INSTALLATION

This category covers cooking equipment intended for commercial indoor use, such as coffee machines, espresso coffee makers (single or grouped dispensers), conductive cookers, food warmers including heated food servers, fryers, griddles, nut warmers, ovens, popcorn machines, steam kettles, ranges, and other appliances for use in commercial kitchens, restaurants, or other business establishments where food is dispensed.

This category also covers custom-built food preparation and/or serving equipment consisting of drop-in components, shelf heaters, plate warmers, lighted and/or heated food displays, etc.

These appliances are intended for commercial use in unclassified locations in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and are intended to be installed in accordance with ANSI/NFPA 96, "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations."

Commercial cooking appliances of certain types are designed for permanent connection to water supply and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

If a product is suitable for built-in installation, side-by-side mounting or stacking, it is indicated in the installation instructions.

Certain appliances covered under this category have also been investigated for use aboard marine vessels over 65 ft in length as covered by USCG, Electrical Engineering Regulations Subchapter J, CG-259, (46 CFR Parts 110-113). Such appliances are identified by UL's Marine Certification Mark.

REBUILT PRODUCTS

This category also covers commercial cooking equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial cooking equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial cooking equipment is subject to the same requirements as new commercial cooking equipment.

PRODUCT MARKINGS

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, suitable warnings or special instructions are marked on the equipment.

Appliances covered under this category are suitable for wiring with either copper or aluminum power supply conductors, unless marked "Use Copper Wire Only For Power Supply Connections."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Commercial Cooking Appliance
- Cooking Appliance

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product identity.

RELATED PRODUCTS

For similar types of gas-fired food service equipment intended for commercial use, see Gas-fired Food Service Equipment (LGQX).

For cooking oil filters that are not an integral part of another appliance, see Filters for Cooking Oil, Commercial (KNRF).

Appliances provided with integral ventilation or recirculating equipment have been investigated to the requirements contained in UL 710B, "Recirculating Systems," and are covered under Commercial Cooking Equipment with Integral Recirculating Ventilation Systems (KNKG).

See Lead Content Verification of Products in Contact with Potable Water (QNVB).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AALZ), and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 197, "Commercial Electric Cooking Appliances."

Appliances with an integral cooking-oil filter have also been investigated to ANSI/UL 1889, "Commercial Filters for Cooking Oil."

Some products covered under this category have also been investigated to NSF/ANSI 4, "Commercial Cooking, Rethermalization and Powered Hot Food Holding and Transport Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Commercial Cooking Appliances (KNGT)—Continued

For those products which are also certified by UL to NSF/ANSI 4, the statement "ALSO CERTIFIED TO NSF/ANSI 4" is included on the product.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Cooking Appliance" or "Cooking Appliance," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to NSF/ANSI 4. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above, the EPH Mark, and the text "ANSI/NSF 4." The EPH Mark includes, within a triangle, the UL symbol, the word "CLASSIFIED" above the UL symbol, and the letters "EPH" below the UL symbol.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Commercial Cooking Appliance Assemblies Certified for Use with Other Manufacturers' Appliances (KNJA)

USE AND INSTALLATION

This category covers commercial cooking appliance assemblies intended for retrofit installation on other manufacturers' certified commercial cooking appliances.

The devices consist of a controller assembly that is designed for use with a specific manufacturer and model of a commercial cooking appliance.

PRODUCT MARKINGS

The markings on and the literature provided with the controller indicate the specific end-use appliance for which it is intended to be used.

FACTORS NOT INVESTIGATED

The operation of the appliance utilizing these controllers is intended to be identical to the operation with the factory-supplied control; however, any programming functions that vary from the original control have not been investigated.

PRODUCT IDENTITY

The following product identity appears on the product:

- Commercial Cooking Appliance Controller

RELATED PRODUCTS

See Commercial Cooking Appliances (KNGT).

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Commercial Cooking Appliances with Integral Recirculating Ventilation Systems (KNKG)

USE AND INSTALLATION

This category covers cooking equipment intended for commercial use, such as deep fat fryers, griddles and other appliances for use in commercial kitchens, restaurants, or other business establishments where food is prepared. Each appliance covered in this category is manufactured with an integral recirculating ventilation system.

The integral recirculating ventilation systems of these appliances consist of a fan, collection hood, and an air filtering system consisting of a grease filter, and may also incorporate other air filtering devices. These systems incorporate an automatic fire extinguisher unit which has been investigated with the cooking equipment section.

Integral recirculating ventilation systems are intended for venting captured and filtered air back into the room in which the equipment is located. These products are not intended for connection to a ducted exhaust system.

These appliances are intended for commercial use in unclassified locations in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and are intended to be installed in accordance with ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."

Commercial cooking appliances of certain types are designed for permanent connection to water supply and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, suitable warning or special instructions are marked on the equipment.

Appliances covered under this category are suitable for wiring with either copper or aluminum power supply conductors, unless marked "Use Copper Wire Only For Power Supply Connections."

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances has been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Commercial Cooking Appliance
 Commercial Cooking Appliance with Integral Recirculating Ventilation System
 Cooking Appliance
 Cooking Appliance with Ductless Hood

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

For products that are intended for installation with ducts, see Exhaust Hoods with Exhaust Dampers (YXZR) and Exhaust Hoods Without Exhaust Dampers (YYCW).

Recirculating systems which are separated from commercial cooking appliances are covered under Hoods, Recirculating Systems, for Use with Specified Commercial Cooking Appliances (YZCT).

For cooking oil filters that are not an integral part of another appliance, see Filters for Cooking Oil, Commercial (KNRF).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

Commercial Cooking Appliances with Integral Systems for Limiting the Emission of Grease-laden Air (KNLZ)

USE AND INSTALLATION

This category covers cooking equipment intended for commercial use, such as pressurized deep fat fryers and other appliances for use in commercial kitchens, restaurants or other business establishments where food is prepared. Each appliance covered under this category is manufactured with an integral system feature to limit the emission of grease-laden air from the cooking process to the room ambient.

These appliances have been investigated for the limit of 5 mg/m³ for the emission of grease-laden air to the room ambient in accordance with the recommendations of ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations," using the EPA-202 test method prescribed for cooking appliances provided with integral recirculating air systems.

These products are not intended for connection to a ducted exhaust system.

Appliances in this category are not provided with an integral fire extinguishing system. Authorities having jurisdiction should be consulted as to the requirements for this equipment with respect to fire extinguishing systems, such as the need for field installed systems in accordance with ANSI/NFPA 96.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installations or use, suitable warning or special instructions are marked on the equipment.

Appliances covered under this category are suitable for wiring with either copper or aluminum power-supply conductors unless marked "Use Copper Wire Only For Power Supply Connections."

Commercial cooking appliances of certain types are designed for permanent connections to water supply and sewer lines at the point of installation. Authorities having jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances has been investigated.

Other product identities may be used as shown in the individual certifications, followed by the words "with Integral System for Limiting the Emission of Grease-laden Air."

RELATED PRODUCTS

For products with integral recirculating systems including fire extinguishing systems, see Commercial, with Integral Recirculating Systems (KNKG).

For cooking oil filters that are not an integral part of another appliance, see Commercial Filters for Cooking Oil (KNRF).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 197, "Commercial Electric Cooking Appliances."

Appliances covered under this category with an integral cooking oil filter have been additionally investigated to ANSI/UL 1889, "Commercial Filters for Cooking Oil."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Cooking Appliance" or "Cooking Appliance," or other appropriate product name as shown in the individual Listings, together with the words "with integral system for limiting the emission of grease-laden air."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Custom-built Food Service Equipment (KNNS)

GENERAL

This category covers custom-built commercial food serving and/or cooking equipment that includes various combinations of electric broilers, food warmers including heated food servers, fryers, griddles, ranges, ovens, lighted and/or heated food displays, shelf heaters, plate warmers, convenience receptacles, and the like. It may also include refrigerated beverage cooler/dispensers, drinking water coolers, freezers, ice makers, ice cream makers, refrigerators, soda fountain units, and the like.

INSTALLATION

Custom-built food service equipment has been evaluated for installation in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and the recommendations of ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."

Certain types of custom-built food service equipment are designed for permanent connections to water supply and sewer lines at the point of installation. Authorities having jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

INSTALLATION INSTRUCTIONS

Custom-built food service equipment of such size that shipment in one carton or fully assembled is impractical, may be divided into sections. Each section may bear a "Custom-built Food Service Equipment Section" Certification Mark and is marked "Section _____ of _____." The first blank space is filled with the number of the section. The second blank space is filled with a number indicating the total number of custom-built food service equipment sections that constitute the complete custom-built food service equipment. The custom-built food service equipment has installation instructions describing or illustrating the proper assembly, mounting and connection of the numbered custom-built food service equipment sections. The acceptability of the assembly of the sections in the field rests with the Authority Having Jurisdiction.

PRODUCT MARKINGS

This equipment includes factory-built assemblies incorporating pre-installed materials and components which after installation are usually con-

Custom-built Food Service Equipment (KNNS)—Continued

cealed and may not be accessible for inspection at the installation site. Electrical connections made during installation, other than supply connections, are identified by markings on the product.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, suitable warnings or special instructions are marked on the equipment.

Equipment in this category is suitable for wiring with either copper or aluminum power-supply conductors unless marked "Use copper wire only for power supply connections."

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared or served by use of this equipment has been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Custom-built Food Service Equipment
- Custom-built Food Service Equipment Section
- Food Kiosk
- Food Service Work Table

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

For cooking-oil filters that are not an integral part of another appliance, see Commercial Filters for Cooking Oil (KNRF).

For refrigerated food service equipment without food heating functions, see Refrigeration Equipment (SCER).

For gas-fired food service equipment intended for commercial use, see Gas-fired Food Service Equipment (LGQX).

See Lead Content Verification of Products in Contact with Potable Water (QNVB).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 197, "Commercial Electric Cooking Appliances," and ANSI/UL 471, "Commercial Refrigerators and Freezers."

Appliances in this category with an integral cooking oil filter have been additionally investigated to the requirements in ANSI/UL 1889, "Commercial Filters for Cooking Oil."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Custom-built Food Service Equipment" or "Custom-built Food Service Equipment Section," or other appropriate product name related to commercial preparation/serving of food such as "Food Kiosk" or "Food Service Work Table."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Filters for Cooking Oil, Commercial (KNRF)

GENERAL

This category covers cooking-oil filters rated 600 V or less, intended for commercial use. This category covers portable filters and fixed filters whether intended for use with specific fryers or for general use.

These appliances filter the cooking oil used in deep-fat fryers usually found in commercial kitchens, restaurants, or other business establishments where food is prepared. They include a pump and may include an integral oil heater.

Filters suitable for built-in installation, side-by-side mounting or stacking are indicated in the installation instructions for the filter.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use, suitable warnings or special instructions are marked on the equipment.

Filters for Cooking Oil, Commercial (KNRF)—Continued

These appliances are suitable for wiring with either copper or aluminum power-supply conductors unless marked "Use copper wire only for power supply connections" or the equivalent.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared using filtered oil from these appliances has been investigated.

PRODUCT IDENTITY

The following product identity appears on the product:
Commercial Filter for Cooking Oil
Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Cooking-oil filters that form an integral part of another appliance are covered under:
Commercial Cooking Appliances (KNGT)
Commercial Cooking Appliances with Integral Recirculating Ventilation Systems (KNKG)
Commercial Cooking Appliances with Integral Systems for Limiting the Emission of Grease-laden Air (KNLZ)
Custom-built Food Service Equipment (KNNS)
Gas-fired Food Service Equipment (LGQX)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1889, "Commercial Filters for Cooking Oil."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Filter for Cooking Oil," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Household Cooking Appliances (KNUR)

USE AND INSTALLATION

This category covers appliances intended for household use that are designed to heat or cook food products for human consumption.

This category also covers:

- Products combining features for food preparation and cooking, such as bread makers and coffee grinder/makers
- Cord-connected pet food cookers and pet treat makers intended for indoor household use that are designed to heat or cook food for pet consumption

In cases where the nature or construction of equipment is such that special safety precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use of the appliances, the necessary special instructions are marked on the appliances themselves or are included in the installation instructions provided with the appliance.

REBUILT PRODUCTS

This category also covers household cooking appliances that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt household cooking appliances are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household cooking appliances are subject to the same requirements as new household cooking appliances, except that an appliance employing a nonmetallic enclosure is required to be 1) grounded, or 2) limited to a rebuilt time frame of five years from the original manufacturing date, subject only to operational verification tests, and not intended to be rebuilt with replacement parts.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects consuming food prepared by use of these appliances has been investigated.

Household Cooking Appliances (KNUR)—Continued

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Bun Warmer
- Coffee Maker
- Corn Popper
- Griddle
- Household Cooking Appliance
- Pet Food Cooker
- Pet Treat Maker

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product identity.

RELATED PRODUCTS

Range and range components intended for separate installation in kitchen cabinets or walls, such as built-in surface unit assemblies and ovens, are covered under Ranges, Household Electric (KRMX).
Microwave ovens are covered under Microwave Cooking Appliances (KQSQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1026, "Electric Household Cooking and Food Serving Appliances," ANSI/UL 1082, "Household Electric Coffee Makers and Brewing-Type Appliances," and UL 1083, "Household Electric Skillets and Frying-Type Appliances."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Bun Warmer," "Corn Popper," "Griddle," "Coffee Maker," "Household Cooking Appliance," "Pet Food Cooker," "Pet Treat Maker," or the name of the specific type of product as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DE-ICING AND SNOW-MELTING EQUIPMENT (KOBQ)

USE AND INSTALLATION

This category covers fixed outdoor electric de-icing and snow-melting systems for use in accordance with Article 426 of ANSI/NFPA 70, "National Electrical Code" (NEC). The equipment is provided with means for permanent wiring connections, except that equipment rated 20 A or less and 150 V ac or less to ground may be of cord-and-plug-connected construction.

To supplement the general requirements in the NEC, the manufacturer is required to provide, with the units or mats, specific installation instructions concerning any limitations of the installation and/or use of the equipment. The instructions for mats or cable units intended for burial in concrete specifically indicate that the slab must be a double pour (poured in two parts) if that is the only acceptable means of installation. If such a limitation is not specifically mentioned, either a single or double pour may be used.

PRODUCT MARKINGS

Factory-assembled products are marked with the manufacturer's identification, catalog number, date of manufacture, and ratings in volts and watts or amperes, and the UL Mark (as noted under **UL MARK** below) affixed to the nonheating leads within 3 in. (75 mm) of the power connection.

Field-assembled products are provided with a marking with the manufacturer's identification, catalog number, date of manufacture, and ratings in volts and total watts or amperes, or total length and watts per unit

PRODUCT CATEGORIES BY CATEGORY CODE

De-icing and Snow-melting Equipment (KOBQ)—Continued

length, and the UL Mark (as noted under **UL MARK** below) on a durable tag/label that will be affixed to the nonheating leads within 3 in. (75 mm) of the power connection.

The UL Mark does not appear on any other field-applied labels provided with the equipment, such as labels for the panel, heating controls, or any other device.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- De-icing and Snow-melting Equipment
- Roof De-icing Equipment

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Pipe-heating cable is covered under Mobile/Manufactured Home Pipe-heating Cable (KQVU), Industrial and Commercial Pipe-heating Cable (KQXR) and Residential Pipe-heating Cable (KQYI).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic requirements used to investigate products in this category intended for use in residential applications are contained in UL Subject 1588, "Outline of Investigation for Roof and Gutter De-Icing Cable Units."

The basic standard used to investigate products in this category intended for use in commercial and industrial applications is UL 515, "Electrical Resistance Heat Tracing for Commercial and Industrial Applications."

The basic standard used to investigate products in this category intended for use in commercial applications is IEEE 515.1 (2012), "Testing, Design, Installation, and Maintenance of Electrical Resistance Trace Heating for Commercial Applications."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "De-icing and Snow-Melting Equipment" or "Roof De-icing Equipment," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DUCT HEATERS, ELECTRIC (KOHZ)**GENERAL**

This category covers fixed electric duct heaters and remote control assemblies, rated 600 V or less, typically used in the air stream of a ducted system.

A duct heater is a self-contained heater (external to the air-moving unit), field installed in the air stream of a ducted system. It is designed to be installed where an adequate flow of air from a separate interlocked fan or blower system is provided. Such a heater may be located in the main supply duct of an air heating system or in one of the branch ducts. Two or more duct heaters may be installed in a group (in proximity to one another in the duct) if tests indicate acceptable results when the heaters are installed in accordance with the manufacturer's instructions.

A duct heater intended to be employed in conjunction with another source of heat is judged on the basis of its compliance with ANSI/UL 1996, "Electric Duct Heaters," and further examination and tests to determine whether or not the combination is acceptable.

Wiring Termination Provisions

For permanently connected equipment, the wiring termination provisions are based on tests and Table 310.15(B)(16) of ANSI/NFPA 70, "National Electrical Code" (NEC) as follows:

1. 75°C insulated conductors at the 75°C ampacities.
2. 90°C insulated conductors at the 75°C ampacities, in which case the equipment is marked for 90°C conductors.
3. Insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

Also see **INSTALLATION REQUIREMENTS** (Appliance and Utilization Equipment Terminations) under Electrical Equipment for Use in Ordinary

Duct Heaters, Electric (KOHZ)—Continued

Locations (AALZ) and **ELECTRICAL INSTALLATIONS** under Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

INSTALLATION

This equipment is intended to be installed in accordance with the NEC.

The air duct system is intended to be installed in accordance with ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," and ANSI/NFPA 90B, "Installation of Warm Air Heating and Air-Conditioning Systems."

Wiring Diagrams

The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

Electric Heat Considerations

In duct heaters rated more than 48 A, the loads are subdivided so that each load does not exceed 48 A and is protected at not more than 60 A. The overcurrent protective devices are either included as an integral part of the heater or are furnished as a separate assembly. If the protective devices are furnished as a separate assembly, the heater is marked to specify that it be used with that particular separate assembly. For such separate assemblies which are specifically certified for use with electric duct heaters, see Control Panels, Remote, for Electric Duct Heaters (KMLW). Other certified separate assemblies, as referenced on the duct heater marking, may also be used.

Unless specifically indicated in the individual certifications as "Suitable for zero clearance installation," the duct heater units are intended to be installed in ducts with the clearances to combustible materials as specified in the manufacturer's installation instructions and marked on the duct heater unit itself. Care should be taken to ensure that duct heaters are positioned properly (horizontal air flow or vertical air flow) since required clearances are affected by the position of the duct work in some instances.

Unless otherwise indicated, the designated clearances (other than "zero") are based on tests of units with uninsulated sheet-metal ducts attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit and ducts.

Each duct heater incorporates integral limit controls intended to protect against abnormal operating conditions that might arise from blocked inlets, blocked outlets, or fan failures. Magnetically-operated switching devices or similar components required for use with these limit controls are either included as an integral part of the heater or are furnished as a separate assembly as described above. Supplementary controls are not necessarily supplied as part of the duct heater.

A separate room thermostat must be provided to control the room air temperatures. For certifications of thermostats and similar devices, see Temperature-indicating and -Regulating Equipment (XAPX). Provision for an interlock circuit, to ensure operation of the separate blower when the duct heater is energized, is included in the heater or in the separate assembly as described above.

Tests have indicated that no adverse thermal effects are obtained when duct heaters marked to indicate that they are suitable for use with heat pumps, or central cooling air conditioners or fan-coil units are installed with certain of these units [See Heating and Cooling Equipment (LZFB)], provided the duct heater is used only in horizontal or upflow systems, and the duct heater is located downstream at least 4 ft from the nearest surfaces of the heat pump, central cooling air conditioner, or fan-coil unit.

Unit Installation

Duct heaters are intended for installation in noncombustible ducts and are designed to be used individually and in groups as supplementary heat sources in air-heating systems or as primary heat sources with separate blowers where the available heat from the duct heaters is sufficient for local conditions.

Duct heaters suitable for outdoor installation are so marked. Heaters not marked as suitable for outdoor installation are for indoor use only.

The manufacturer's application and installation instructions furnished with each heater should be consulted to determine the factors applicable to the particular installation, including required distances between the heater and turns in the duct, changes in duct sizes, air filters, humidifiers, etc. Unless these instructions specify other distances for horizontal or upflow installations, (1) turns in the duct on the inlet side of the heater should be located at least 4 ft from the heater, (2) turns in the duct on the outlet side of the heater should be located at least 2 ft from the heater, and (3) changes in duct sizes, air filters, humidifiers, etc., should be located at least 4 ft from either side of the heater. Duct heaters having instructions describing particular design characteristics and/or installations are investigated for those specific characteristics and/or installations.

The proper installation of these heaters requires careful consideration of the individual manufacturer's design characteristics, taking into consideration the number of heaters employed, the volume of air passing through the heaters, and the ambient temperatures and source of the air on the input side of the heater installation.

Motor Group Installation

Duct Heaters, Electric (KOHZ)—Continued

In permanently connected units employing two or more motors or a motor(s) and other loads operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Section 430.53(C) as referenced in Section 440.22 of the NEC. Such multimotor and combination load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating that does not exceed the value marked in the data plate. This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable. Where the marking specifies fuses or "HACR Type" circuit breakers, the circuit is intended to be protected only by the type of protective devices specified.

PRODUCT IDENTITY

The following product identity appears on the product:
Duct Heater

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1996, "Electric Duct Heaters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Duct Heater."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, SAUNA AND STEAM BATH (KPJV)

Sauna Heating Equipment (KPSX)

USE AND INSTALLATION

This category covers heating equipment intended for concentrated heating at elevated temperatures in relatively confined areas with or without the addition of moisture.

Particular attention should be paid to the heater installation restrictions, such as warning markings, remote thermostats and control installations, guards, minimum size of room, and distance from adjacent surfaces that are marked on the heater.

This equipment is intended for permanent connection to the supply source, except for some sauna heater-room combination units that may be cord connected as specifically indicated.

FACTORS NOT INVESTIGATED

The physiological effects of heat, reduced ventilation, and other conditions that may be found within the room where the heater is installed have not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Sauna
Sauna Heater

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Steam bath equipment is covered under Steam Bath Equipment (KQBZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 875, "Electric Dry-Bath Heaters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sauna Heater" or "Sauna," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Steam Bath Equipment (KQBZ)

USE AND INSTALLATION

This category covers steam bath generators, combination room and steam generator systems, and steam bath cabinets intended for high-humidity concentrated heating at elevated temperatures for personal bathing.

Steam bath equipment accessories, such as gangable steam units, timer options, and drain options, are also covered under this category. These accessories are intended for installation only on certified equipment as designated in the individual certifications. The accessories are intended primarily for field installation, but may be factory installed.

Information concerning field-wiring connections, mounting location, installation clearances, end-use equipment catalog numbers, etc., are marked on the accessory, and/or in detailed installation instructions accompanying each accessory.

Particular attention should be paid to installation instructions of the steam generator and markings on the product for restrictions, such as minimum distances to adjacent surfaces, valving of the steam outlet, etc.

Steam generators covered under this category have not been investigated for their suitability as a source of steam for space-heating purposes or for industrial or commercial use.

FACTORS NOT INVESTIGATED

The physiological effects of heat, reduced ventilation, and other conditions that may be found within the room where the steam is discharged or where the steam bath is installed have not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Shower/Steamer Unit
Steam Bath Cabinet
Steam Bath Equipment
Steam Bath Heater

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Sauna heating equipment is covered under Sauna Heating Equipment (KPSX).

Steam generators for industrial or commercial use are covered under Heaters, Industrial and Laboratory (KQLR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOSPITALITY-USE APPLIANCES (KQDA)**Hospitality-use Drip-type Coffee Makers (KQDJ)****USE AND INSTALLATION**

This category covers hospitality-use drip-type coffee makers and other similar drip-type brewing appliances intended for use by the general public in hotel sleeping areas and office environments.

Hospitality-use drip-type coffee makers are subject to the same requirements as household drip-type coffee makers, except that the appliances are: grounded, provided with an automatic shutoff manual reset operating control or an electronic on/off push-button switch with a maximum one-hour auto shutoff and “lock out” feature, provided with a cord tag containing Important Safeguards information, and provided with user maintenance instructions for office building or hotel maintenance and management staff.

In cases where the nature or construction of component equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, “National Electrical Code,” must be observed in installation or use of the appliances, the necessary special instructions are marked on the appliances themselves or are included in the installation instructions provided with the appliance.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects of consuming food prepared by use of these appliances has been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Hospitality-use Coffee Maker
Hospitality-use Drip-type Coffee Maker

RELATED PRODUCTS

Drip-type coffee makers intended for commercial use that are found in commercial kitchens, restaurants, or other business establishments where food is dispensed are covered under Commercial Cooking Appliances (KNGT).

Drip-type coffee makers intended for household residential use are covered under Household Cooking Appliances (KNUR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1082, “Household Electric Coffee Makers and Brewing-Type Appliances.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Hospitality-use Drip-type Coffee Maker” or “Hospitality-use Coffee Maker.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

IMMERSION-TYPE LIQUID HEATERS, INDUSTRIAL (KQGV)**USE AND INSTALLATION**

This category covers immersion-type liquid heaters intended for heating water-based liquids. The corrosion resistance of the immersed parts has been investigated on the basis of water. The degree of corrosion resistance to acidic, alkaline, etc., water-based liquids may vary depending on the material and/or coating on the immersed parts and the type and strength of the solution. The heater manufacturer’s information should be consulted in selecting a heater for an application.

Through-the-wall heaters should be operated only while the heating element is completely immersed in a water-based liquid. Other immersion-type liquid heaters should be immersed to a depth as marked on the product or as indicated in the installation and use instructions.

The heaters incorporate a temperature-limiting device that responds to the temperatures created by the heater; or the heater is marked to specify that a low-liquid-level cutoff control should be installed and connected to de-energize the heater upon a low-liquid-level condition.

Heaters intended to be installed through the wall of a vessel have means for permanent wiring connections to the electrical supply. Other immersion-type liquid heaters may have either a power-supply cord for cord-and-plug connection or provision for permanent wiring connections to the electrical supply.

PRODUCT IDENTITY

The following product identity appears on the product:
Immersion-type Liquid Heater

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, “Electric Heating Appliances.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Immersion Type Liquid Heater.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, INDUSTRIAL AND LABORATORY (KQLR)**GENERAL**

This category covers heating appliances rated 600 V or less and intended for use in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC), for industrial and laboratory applications.

Heating appliances covered under this category include branding irons, brazers, dental laboratory heaters, electric kilns, etchers, glue pots, heat guns, heating cable, hot plates, incubators of the air flow and water types, laboratory furnaces and dryers, mobile drying ovens, soldering guns and irons, soldering stations and tools, vacuum ovens and water baths.

Portable electric heating devices of the soldering-iron-type present certain inherent hazards. The temperatures necessary for their normal use are high enough to cause fire if they are left in contact with combustible materials.

Infrared heating equipment has not been investigated for use in hazardous (classified) locations as defined in the NEC.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, suitable warnings and necessary special instructions are marked on the equipment.

Industrial and laboratory hot plates, ovens and other similar products have not been investigated for explosion and fire hazards involved in the heating of chemicals.

Vapor degreasers are intended for use only with the specific cleaning fluids. Adequate ventilation is required for this equipment and the manufacturer’s installation and operation instructions should be followed. The

Heaters, Industrial and Laboratory (KQLR)—Continued

physiological effects of the cleaning fluids intended for use with the degreasing equipment have not been investigated.

Steam generators and boilers are required to be provided with tanks built in conformance with the ASME Boiler Construction Code, and suitable pressure relief mechanisms. Water temperatures are not limited to a maximum of 90°C.

An explosion hazard may exist in steam generators because of the accumulation of oxygen and hydrogen in an unvented system operated under standby conditions for long periods of time, or to which condensate is returned. Suitable venting devices should be installed and such systems should be purged frequently.

Steam generators and boilers have not been investigated for their suitability as a source of hot water or steam for space-heating purposes.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Branding Iron
- Laboratory Hot Plate
- Laboratory Incubator
- Soldering Iron
- Water Bath

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Laboratory Hot Plate," "Soldering Iron," "Laboratory Incubator," "Water Bath," "Branding Iron," or the name of the specific type of product as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MICROWAVE COOKING APPLIANCES (KQSQ)

GENERAL

This category covers cooking equipment incorporating one or more microwave generators operating in the normal ISM bands of 915 + or - 25 and 2450 + or - 50 MHz. This equipment includes portable and stationary microwave cooking appliances employing resistive-type heating elements for baking, broiling, browning, convection cooking, or similar operations.

This category also covers combination microwave oven vent-hood fans, and kits for converting counter-top units to built-in, under-cabinet, wall-mounted or similar installations.

The appliances are intended for household or commercial use in ordinary locations in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, the necessary special instructions are marked on the appliances themselves or are included in the installation instructions provided with the appliance.

All microwave cooking appliances, cord-connected and permanently connected, have provision for being properly grounded.

Products specifically designed for field installation in or on a microwave cooking appliance or to adapt a microwave cooking appliance from one type of installation to another are indicated in the individual certifications and are marked to identify the microwave cooking appliance(s) with which they have been investigated.

Counter-top and under-cabinet mounted units have been investigated individually in two-sided right-angle alcoves. Products that have been investigated and found suitable for some other type of usage, such as

Microwave Cooking Appliances (KQSQ)—Continued

built-in installation, side-by-side mounting, stacking or field installation over electric or gas ranges are identified for such usage by installation instructions, product markings, or both.

Units suitable for installation above a range or counter-mounted cooking unit are identified for such installation and the minimum acceptable vertical clearance between the microwave cooking appliance and the range or counter mounted cooking unit is specified in instructions, product markings, or both.

These microwave cooking appliances are provided with a marking indicating whether they are intended for household use, commercial use, or both.

These microwave cooking appliances have been investigated to demonstrate that the microwave radiation emission is within the limitations prescribed by the U.S. Department of Health and Human Services, Food and Drug Administration, Center for Devices and Radiological Health.

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances have been investigated.

Microwave ovens suitable for use in a marine environment are covered under Cooking Appliances, Electrical, Marine (EJOY).

REBUILT PRODUCTS

This category also covers microwave cooking appliances which are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt microwave cooking appliances are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt microwave cooking appliances are subject to the same requirements as new microwave cooking appliances.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Microwave Cooking Appliance
- Microwave Food Warmer
- Microwave Oven
- Microwave Oven Vent-hood Fan

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Household electric ranges and built-in ovens incorporating a microwave cooking feature are covered under Ranges, Household Electric (KRMX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 923, "Microwave Ovens."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Microwave Oven," "Microwave Food Warmer," "Microwave Cooking Appliance," "Microwave/Oven Vent Hood Fan," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PIPE-HEATING CABLE (KQUF)

GENERAL

This category covers electric heating cable designed to be secured to pipes to reduce the likelihood of freezing or to facilitate flow of viscous liquids. Some units incorporate a thermostat that automatically turns on the heating cable when the temperature drops below a predetermined value.

PRODUCT CATEGORIES BY CATEGORY CODE

Pipe-heating Cable (KQUF)—*Continued*

Pipe-heating cable is intended to be installed in accordance with the manufacturer's installation instructions.

Information is provided, either as marking on the cable or in the installation instructions, as to the intended application of the heating cable. The certifications appear separately under the following subcategories: Mobile/Manufactured Home Pipe-heating Cable (KQVU), Industrial and Commercial Pipe-heating Cable (KQXR) and Residential Pipe-heating Cable (KQYL).

The ability of heating cable to maintain temperatures of liquids in pipes depends upon ambient temperature conditions and has not been investigated.

RELATED PRODUCTS

For de-icing and snow melting equipment, see De-icing and Snow Melting Equipment (KOBQ).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Mobile/manufactured Home Pipe-heating Cable (KQVU)**USE AND INSTALLATION**

This category covers electric heating-cable systems intended to reduce the likelihood of water freezing in exposed pipes of mobile/manufactured homes. The cable is provided with an attachment plug and intended to be connected to a receptacle outlet on the underside of the mobile/manufactured home.

Equipment is intended to be installed in accordance with the requirements of Articles 427 and 550 of ANSI/NFPA 70, "National Electrical Code."

Pipe-heating cable is intended to be installed in accordance with the manufacturer's installation instructions.

Unless specifically indicated otherwise by marking on the heating cable or in the installation instructions, this heating cable is intended for use only on metallic pipes.

PRODUCT MARKINGS

Factory-assembled products are marked with the manufacturer's identification, catalog number, date of manufacture, and ratings in volts and watts or amperes, and the UL Mark (as noted under **UL MARK** below) affixed to the nonheating leads within 3 in. (75 mm) of the power connection.

The UL Mark does not appear on any other field-applied labels provided with the equipment, such as labels for the panel, heating controls, or any other device.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Mobile Home Pipe-heating Cable

Mobile/Manufactured Home Pipe-heating Cable

RELATED PRODUCTS

Heating cable for use with fire-suppression sprinkler or standpipe systems is covered under Heating-cable Systems for Use on Fire-protection-system Piping (VGN).

Heating cable for use as fixed outdoor electric de-icing and snow-melting systems is covered under De-icing and Snow-melting Equipment (KOBQ).

Heating cable for use to reduce the likelihood of water freezing in residential pipes is covered under Residential Pipe-heating Cable (KQYL).

ADDITIONAL INFORMATION

For additional information, see Pipe-heating Cable (KQUF), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHQ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1462, "Outline of Investigation for Mobile Home Pipe Heating Cable."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mobile Home Pipe Heating Cable" or "Mobile/Manufactured Home Pipe Heating Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

Mobile/manufactured Home Pipe-heating Cable (KQVU)—*Continued*

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Industrial and Commercial Pipe-heating Cable (KQXR)**USE AND INSTALLATION**

This category covers electric heating systems intended to be installed on or in pipes in accordance with Article 427 of ANSI/NFPA 70, "National Electrical Code."

The heating system is intended to be connected to the supply system by permanent wiring methods or by flexible supply cord with an attachment plug where permitted.

Unless specifically indicated otherwise by a marking on the heating cable or heating system or in the installation instructions, the heating cable or heating system is intended for use only on metallic pipes.

PRODUCT MARKINGS

Factory-assembled products are marked with the manufacturer's identification, catalog number, date of manufacture, and ratings in volts and watts or amperes, and the UL Mark (as noted under **UL MARK** below) affixed to the nonheating leads within 3 in. (75 mm) of the power connection.

Field-assembled products are provided with a marking with the manufacturer's identification, catalog number, date of manufacture, and ratings in volts and total watts or amperes, or total length and watts per unit length, and the UL Mark (as noted under **UL MARK** below) on a durable tag/label that will be affixed to the nonheating leads within 3 in. (75 mm) of the power connection.

The UL Mark does not appear on any other field-applied labels provided with the equipment, such as labels for the panel, heating controls, or any other device.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Heating Cable

Pipe-heating Cable

Pipe-heating System

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Heating cable for use with fire-suppression-sprinkler or standpipe systems is covered under Heating-cable Systems for Use on Fire-protection-system Piping (VGN).

ADDITIONAL INFORMATION

For additional information, see Pipe-heating Cable (KQUF), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHQ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 515, "Electrical Resistance Heat Tracing for Commercial and Industrial Applications."

Pipe-heating cable intended for use in industrial applications is additionally investigated to the performance requirements of IEEE 515 (2011), "Testing, Design, Installation, and Maintenance of Electrical Resistance Heat Tracing for Industrial Applications."

Pipe-heating cable intended for use in commercial applications is additionally investigated to the performance requirements of IEEE 515.1 (2012), "Testing, Design, Installation, and Maintenance of Electrical Resistance Heat Tracing for Commercial Applications."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heating Cable," "Pipe Heating Cable" or "Pipe-heating System," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Residential Pipe-heating Cable (KQYI)

USE

This category covers electric heating systems intended to reduce the likelihood of water freezing in residential pipes. The heating system or heating cable is provided with a flexible cord and attachment plug and is intended specifically for residential pipe-heating uses, such as sprinkler systems and in crawl spaces, basements, well houses, and the like.

The heating cable or heating system is intended for use in accessible locations only.

The heating cable or heating system is suitable for use on metal and rigid plastic water-filled pipes.

PRODUCT MARKINGS

Factory-assembled products are marked with the manufacturer's identification, catalog number, date of manufacture, and ratings in volts and watts or amperes, and the UL Mark (as noted under **UL MARK** below) affixed to the nonheating leads within 3 in. (75 mm) of the power connection.

Field-assembled products are provided with a marking with the manufacturer's identification, catalog number, date of manufacture, and ratings in volts and total watts or amperes, or total length and watts per unit length, and the UL Mark (as noted under **UL MARK** below) on a durable tag/label that will be affixed to the nonheating leads within 3 in. (75 mm) of the power connection.

The UL Mark does not appear on any other field-applied labels provided with the equipment, such as labels for the panel, heating controls, or any other device.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Residential Pipe-heating Cable
- Residential Pipe-heating System

ADDITIONAL INFORMATION

For additional information, see Pipe-heating Cable (KQUF), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHO).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2049, "Outline of Investigation for Residential Pipe Heating Cable."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Residential Pipe Heating Cable" or "Residential Pipe-heating System."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIANT HEATING EQUIPMENT (KQYZ)

USE AND INSTALLATION

This category covers electric heating cable, cable on a carrier, and flexible and rigid electric heating panels and heating panel sets intended to be installed as fixed equipment for radiant space heating and/or floor warming in accordance with Article 424, Sections V and IX of ANSI/NFPA 70, "National Electrical Code" (NEC). These products form an integral part of the building construction after on-site assembly, installation and connection.

The manufacturer is required to provide with the units specific installation instructions concerning any limitations of the installation and/or use of the equipment. These supplement the installation requirements for electric space-heating systems in the NEC. Failure to comply with all installation instructions may result in a risk of fire or electric shock.

The instructions for heating devices intended for burial in concrete specifically indicate that the slab must be a double pour (poured in two parts) if that is the only acceptable means of installation. If such a limitation is not specifically mentioned, either a single or double pour may be used. Cable units are provided with a tag attached to the nonheating leads which supplement the installation instructions.

Heating products include instructions concerning the intended method of connection to building power, and if additional protection (e.g., conduit) of nonheating leads is anticipated during installation.

Radiant Heating Equipment (KQYZ)—Continued

Connectors to be assembled to wire or panel busbars in the field using a special tool are intended to be assembled using the tool specified by the manufacturer.

Stapling guns, if used in the installation of heating cable devices require specially designed heads to prevent damage to the conductor insulation. Only those guns recommended by the cable unit manufacturer should be used for this purpose.

PRODUCT MARKINGS

Radiant heating panels and heating panel sets are marked "Radiant Ceiling Heating Panel," "Radiant Floor Heating Panel," "Radiant Heating Panel" or "Radiant Concrete Heating Panel," or equivalent, as appropriate. Heating devices intended for concrete installation are further marked "Concrete Installation Only."

The Certification Mark (as noted under **UL MARK** below) is provided on the product by the manufacturer, or is included with the above marking and shipped with the product, for attachment to the nonheating leads 3 in. (75 mm) from the source of supply during installation.

The Certification Mark will not appear on other field-applied labels provided with the radiant heating equipment, such as labels for the panel, heating controls, or any other device.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Radiant Heating Cable
- Radiant Heating Embedded Unit
- Radiant Heating Panel Unit

Other product identities may be used as shown in the individual certifications, preceded by the words "Radiant Heating."

RELATED PRODUCTS

Fixed electric heating equipment for pipelines and vessels is covered under Mobile/Manufactured Home Pipe Heating Cable (KQVU) and Pipe Heating Cable (KQUF).

Fixed outdoor electric de-icing and snow-melting equipment is covered under De-icing and Snow-melting Equipment (KOBQ).

Heating panels intended to be installed in a dropped or suspended ceiling or heating equipment with glowing wire heating elements is covered under Air Heaters, Room, Fixed and Location Dedicated (KKWS).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHO).

REQUIREMENTS

The basic standard used to investigate radiant heating panels and heating panel sets in this category is UL 1693, "Electric Radiant Heating Panels and Heating Panel Sets."

The basic standard used to investigate electric space-heating cable in this category is UL 1673, "Electric Space Heating Cables."

The basic requirements used to investigate electric heating products for installation under floor coverings in this category are contained in UL 1683, "Outline of Investigation for Electric Heating Products for Installation Under Floor Coverings."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Radiant Heating Cable," "Radiant Heating Panel Unit" or "Radiant Heating Embedded Unit," or other appropriate product name as shown in the individual Listings, preceded by the words "Radiant Heating."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RANGES, HOUSEHOLD ELECTRIC (KRMX)

GENERAL

This category covers household-type, all-electric cooking equipment (consisting of oven and surface units), combination electric and solid-fuel cooking equipment (consisting of electric ovens and surface units, together with a solid-fuel combustion section), wall-mounted and counter-mounted cooking equipment.

PRODUCT CATEGORIES BY CATEGORY CODE

Ranges, Household Electric (KRMX)—Continued

Cooking equipment is investigated and tested to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer. Some of the more common arrangements are described below.

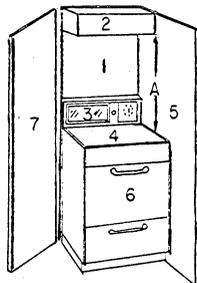

Microwave cooking appliances and hood fans with or without a shelf or compartment to accommodate a microwave oven that have been investigated and found suitable for installation above a counter-level range or a counter-mounted cooking unit are identified for such installation. The minimum acceptable vertical clearance between the counter-level range or counter-mounted cooking unit and this appliance is specified in the appliance installation instructions, product markings, or both. See Microwave Cooking Appliances (KQSQ) and Electric Fans (GPWV).

All-electric Arrangements

Counter-level Ranges — (See Fig. 1)

The range, with or without a warming tray located on the top of the back guard, may be installed close against vertical walls at the back and at both sides, and a top cabinet may be installed not less than "A" inches above the top of the cooking platform. See Dimension "A" in Fig. 1.

Fig. 1

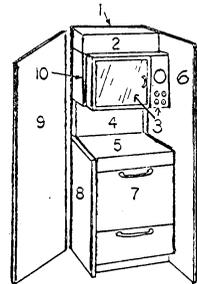

- 1. Building back wall
- 2. Top building cabinet
- 3. Control panel
- 4. Cooking surface
- 5. Building side wall
- 6. Oven
- 7. Building side wall

A = 30 in. minimum clearance between the top of the cooking platform and the bottom of an unprotected wood or metal cabinet; or A = 24 in. (not applicable when an electrically heated warming tray is provided on the back guard) when the bottom of the wood or metal cabinet is protected by not less than 1/4 in. flame-retardant millboard covered with not less than No. 28 MSG sheet steel, 0.015 in. stainless steel, 0.024 in. aluminum or 0.020 in. copper.

Eye-level Ranges — (See Fig. 2)

The range (with either one or two ovens) may be installed close against a vertical wall at the back, and a top cabinet may be installed above the upper oven. If the range does not have a top control panel (this design not shown in illustration) an upper-end cabinet of the same depth as the cabinet above the oven and a base cabinet both 6 in. minimum width should be installed at the end of the range opposite the hinged end of the door. If a top control panel is provided at that end, the upper-end cabinet and base cabinet may be omitted and the range may be installed close against a vertical wall at that end. The end of the range on which the hinges are located may be installed close against a vertical wall, except that when the wall prevents opening of the door to a position which will permit the removal of an oven rack, an upper-end cabinet of the depth mentioned above and a base cabinet (both of sufficient width) may be installed such that the required opening of the door is achieved. If a lower oven or storage area is not provided to permit floor mounting, the range may be installed on a bottom cabinet or over any specific appliance with which the range is intended to be used.

- 10. Upper-end building cabinet

All-electric Wall-mounted Ovens and Counter-mounted Cooking Units

These include wall-mounted and counter-mounted cooking equipment or combinations thereof intended to be permanently installed on or in the building structure. Spacings to combustible materials are the minimum allowed by the construction of the device. Unless specifically indicated by marking on the appliances, the individual oven units or counter-mounted cooking units are intended for single-unit installation only and are not intended for stacking or placing in pairs side by side or back to back. When double-unit installation is intended, the installation instructions give the minimum centerline spacings unless the units are suitable for the smallest clearance between units permitted by the construction. For cooking units, a top cabinet may be installed "A" inches above the top of the cooking platform. See Dimension "A" in Fig. 3, and note following Fig. 1.

Fig. 3

- 1. Building back wall
- 2. Top building cabinet
- 3. Control panel
- 4. Cooking surface
- 5. Building side wall
- 6. Bottom building cabinet
- 7. Building side wall

Combination Ranges

As permitted by the installation marking, the range may be installed close against a vertical wall or with no more than a 6 in. air space to a vertical wall at the end where electrical units are located. See the table below for the spacings at the flue or vent and at the end of the range where solid fuel is burned.

Type or Fuel & Range Construction	Spacing to Wall	Spacing From
	From Nonelectrical End of Range in In.	Flue or Vent in In.
Solid-fuel fire pot without fire-clay lining	36	18
Solid-fuel fire pot with fire-clay lining	24	18

All-electric ranges, wall-mounted and counter-mounted cooking equipment and combination ranges, intended for nominal 125/250 V or less (including those rated 120/208), three-wire, operation are provided with a bonding connection between the frame of the appliance and the neutral to provide grounding in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). Unless the appliance is marked "Warning: Frame Grounded To Neutral Of Appliance Through A Link. This Range Not For Use In Mobile Homes Or In Areas Where Local Codes Do Not Permit Grounding Through Neutral," instructions are provided for disconnecting the bond and making a direct connection of the metallic parts or the unit to ground.

The flexible metallic conduit and high-temperature insulated leads provided with some ranges are tested and recognized as a component part of the equipment. Unless a conduit fitting or outlet box is installed at the factory, tape or other means is provided at the end of the conduit to protect the conductors during shipment. This protection is not intended to take the place of a conduit bushing or fitting which is required by the NEC.

REBUILT PRODUCTS

This category also covers household electric ranges that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt household electric ranges are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household electric ranges are subject to the same requirements as new household electric ranges.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances has been investigated.

PRODUCT IDENTITY

Ranges, Household Electric (KRMX)—Continued

One of the following product identities appears on the product:
Electric Range
Range

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Cooking equipment/refrigerator combinations are covered under Kitchen Units, Refrigerated (SJPT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 858, "Household Electric Ranges," and ANSI/UL 923, "Microwave Cooking Appliances."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Range" or "Electric Range," or other appropriate product name.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER HEATERS (KSAV)

Commercial Storage Tank and Booster Water Heaters (KSBZ)

USE AND INSTALLATION

This category covers water heaters intended to supply hot water for commercial or industrial use, and to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

These water heaters are equipped with a temperature-regulating control that limits the water temperature to a maximum of 90°C (194°F). This control has been preset at the factory to a maximum setting of 60°C (140°F). These heaters are also equipped with a manually reset temperature-limit control that restricts the water temperature to a maximum of 99°C (210°F) should a regulating control fail.

A combination temperature-pressure relief valve is supplied or factory installed on these heaters. When supplied separately, instructions for mounting the valve are provided with the heater.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Booster Water Heater
- Commercial Storage Tank Water Heater

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Water heaters intended for use in marine environments are covered under Water Heaters, Marine (LXWV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1453, "Electric Booster and Commercial Storage Tank Water Heaters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Water Heaters, Space Heating (KSDR)

USE AND INSTALLATION

This category covers water heaters intended for the heating of water and storage of hot water for space-heating purposes, to be installed in accordance with ANSI/NFPA 70, "National Electrical Code." These heaters are intended for use in jurisdictions that permit the use of hot water space-heating systems that do not employ tanks constructed and marked in accordance with the "ASME Boiler and Pressure Vessel Code." Authorities Having Jurisdiction should be consulted before installation.

These heaters are equipped with temperature-regulating devices that allow a water temperature not higher than 90°C (194°F) and also with temperature-limiting devices that limit the water temperature to a maximum of 99°C (210°F).

PRODUCT IDENTITY

The following product identity appears on the product:

- Space-heating Water Heater

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Pressurized electric water heaters intended for space-heating applications that are constructed and marked in accordance with the appropriate "ASME Boiler and Pressure Vessel Code" are covered under Boilers, Electric (BDJS).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 834, "Heating, Water Supply, and Power Boilers - Electric."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Household Water Heaters, Storage Tank (KSDT)

USE AND INSTALLATION

This category covers storage tank water heaters rated 600 V or less and 12 kW or less and having a tank capacity of more than one gal and not more than 120 gals.

This category does not cover immersed electrode, side arm, booster, instantaneous or immersion-type water heaters or water-heating portions of water-dispensing appliances.

PRODUCT CATEGORIES BY CATEGORY CODE

Household Water Heaters, Storage Tank (KSDT)—Continued

These water heaters are intended for household use and permanent connection to the supply source in accordance with ANSI/NFPA 70, "National Electrical Code."

Household storage tank water heaters are equipped with a temperature-regulating device intended to restrict the water temperature to a maximum of 85°C (185°F). This device has been preset at the factory to a maximum setting of 51.7°C (125°F). These heaters are also equipped with a manually reset temperature-limit control that restricts the water temperature to a maximum of 99°C (210°F) should a regulating control fail.

Safety devices, such as temperature-pressure-relief mechanisms, are not required to be furnished as part of the certified water heater, but markings and instructions accompany each water heater indicating that a suitable safety device which complies with the local plumbing codes shall be connected to the heater at the time it is installed.

PRODUCT MARKINGS

Water heaters in accordance with Part 3280.707(d) (1) of HUD Mobile Home Construction and Safety Standards for Energy Efficiency are marked "Design evaluated by UL in accordance with Part 3280.707(d) (1) of HUD Mobile Home Construction and Safety Standards for Energy Efficiency."

PRODUCT IDENTITY

The following product identity appears on the product:

Household Storage Tank Water Heater

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Water heaters intended for use in marine environments are covered under Water Heaters, Marine (LXWV).

Solar-electric water heaters are covered under Water Heaters, Solar (UZWZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 174, "Household Electric Storage Tank Water Heaters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Immersion Water Heaters (KAFX)

GENERAL

This category covers immersion water heaters, both cord-connected and for permanent connection.

Some immersion water heaters intended for permanent connection incorporate thermostats and auxiliary switches which respond to the temperatures created by the immersion water heaters. The acceptability of thermostats or auxiliary switch construction; as temperature regulating and/or safety controls when incorporated in the ultimate equipment assembly for which they are intended, must be determined in accordance with the requirements applicable to that equipment.

PRODUCT IDENTITY

The following product identity appears on the product:

Immersion Heater

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

Immersion Water Heaters (KAFX)—Continued

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Immersion Heater," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Miscellaneous Water Heaters (KSGR)

GENERAL

This category covers instantaneous heaters, strap-on-type heaters, heaters for sink or water-cooler mounting, and other water heaters not covered under Household Water Heaters, Storage Tank (KSDT), Commercial Storage Tank and Booster Water Heaters (KSBZ) or Immersion Water Heaters (KAFX).

PRODUCT IDENTITY

One of the following product identities appears on the product:

Instantaneous Water Heater

Water Heater

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Instantaneous Water Heater" or "Water Heater," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, WATERBED (KSHU)

USE

This category covers cord-connected electric heaters, usually in the form of mats, intended for use under the mattresses of waterbeds. Heaters employing external, user-adjustable temperature control units are covered as a unit, for installation in accordance with the manufacturer's instructions.

PRODUCT IDENTITY

The following product identity appears on the product:

Waterbed Heater

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

Heaters, Waterbed (KSHU)—Continued

The basic standard used to investigate products in this category is UL 1445, "Electric Water Bed Heaters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Waterbed Heater."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, SPECIALTY (KSOT)

USE AND INSTALLATION

This category covers heating appliances rated 600 V or less for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). This includes heating appliances intended for household and industrial applications, as well as products that generate steam for other than space-heating purposes, and have an electrical power rating of 15 kW or less per steam-generating vessel. A heating appliance is defined as an electrically energized product that directly or indirectly generates heat to perform its intended function.

Heating devices may present certain inherent hazards. The temperatures necessary for their normal use can be high enough to cause fire if they are left in contact with combustible materials.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, necessary special instructions are marked on the equipment.

REBUILT PRODUCTS

This category also covers steam-cleaning machines, steam-cleaning machines with sweeper features and steam-cleaning machines with vacuum features that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt steam-cleaning machines, steam-cleaning machines with sweeper features and steam-cleaning machines with vacuum features are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt steam-cleaning machines, steam-cleaning machines with sweeper features and steam-cleaning machines with vacuum features are subject to the same requirements as new steam-cleaning machines, steam-cleaning machines with sweeper features and steam-cleaning machines with vacuum features.

Rebuilt products are required to be provided with a date code indicating the date of rebuilding.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Charcoal Igniter
- Embosser
- Hand Dryer
- Pet Dryer
- Stock Tank Heater

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product identity.

RELATED PRODUCTS

Hand dryers incorporating fans without heaters are covered under Fans, Electric (GPVV).

Industrial and laboratory heaters, including mobile drying ovens, soldering stations and tools, laboratory furnaces, incubators, hot plates, electric kilns, dental laboratory heaters, and the like are covered under Heaters, Industrial and Laboratory (KQLR).

Devices intended for vaporization of water, certain medicaments in water solution and glycol are covered under Vaporizers (YEIV).

Incubators and brooders intended for use on farms and commercial hatcheries are covered under Incubators and Brooders (NHYZ).

Heated air deodorizers and air fresheners are covered under Deodorizers and Air Fresheners (EOGX).

Instantaneous water heaters, strap-on heaters, heaters for sink or water-cooler mounting are covered under Miscellaneous Water Heaters (KSGR).

Heaters, Specialty (KSOT)—Continued

Heaters intended for installation in or adjacent to swimming pools or spas are covered under Heaters (WBRR).

Household vacuum cleaners provided with a steam-cleaning feature, where the vacuum cleaner is the appliance's primary function, are covered under Vacuum Cleaning Machines and Blower Cleaners (DMLW).

Steam-cleaning machines with sweeper features, where the sweeper function is the appliance's primary function, are covered under Cleaning Machines, Motor Operated (DMGK).

High-pressure cleaning machines provided with steam-cleaning features, where the high-pressure-cleaning function is the appliance's primary function, are covered under High-pressure Cleaning Machines, Electrically Operated (DMKK).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

Steam-cleaning machines with vacuum-cleaning features, where the steam cleaner is the appliance's primary function, are additionally investigated to ANSI/UL 1017, "Vacuum Cleaners, Blower Cleaners and Household Floor Finishing Machines."

Steam-cleaning machines with sweeper features, where the steam cleaner is the appliance's primary function, are additionally investigated to ANSI/UL 73, "Motor-Operated Appliances."

Steam-cleaning machines with high-pressure-cleaning features, where the steam cleaner is the appliance's primary function, are additionally investigated to ANSI/UL 1776, "High-Pressure Cleaning Machines."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Hand Dryer," "Pet Dryer," "Embosser," "Stock Tank Heater," "Charcoal Igniter," or the name of the specific type of product as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, EMITTER TYPE, CERTIFIED FOR USE IN SPECIFIED EQUIPMENT (KSSG)

USE AND INSTALLATION

This category covers heaters intended for installation on specific models of UL-certified heating equipment that are shipped from the factory without heaters installed. These heaters have been investigated by UL in specific models identified in markings or instructions to determine that, when used in accordance with the manufacturer's instructions, the complete product complies with applicable requirements.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Heat Emitter
- Heat Emitter for Vivarium Heaters

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Heaters, Emitter Type, Certified for Use in Specified Equipment (KSSG)—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**FOR USE WITH [identification of specified UL-certified product]
Alternate UL Mark
UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY]
FOR USE WITH [identification of specified UL Listed product]
Control No.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING APPLIANCES (KTCR)

GENERAL

This category covers heating appliances intended for installation and use in accordance with the following standards as appropriate:

- ANSI/NFPA 31, "Installation of Oil-Burning Equipment"
- ANSI/NFPA 54, "National Fuel Gas Code"
- ANSI/NFPA 58, "Liquefied Petroleum Gas Code"
- ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems"
- ANSI/NFPA 90B, "Installation of Warm Air Heating and Air-Conditioning Systems"

When installing manufactured home and recreational vehicle appliances, see also the Department of Housing and Urban Development's Manufactured Home Construction and Safety Standards or ANSI/NFPA 1192, "Recreational Vehicles."

Heating appliances are investigated to determine the suitability of the construction and performance of the appliances as an assembly and of the fuel-burning apparatus, controls, electrical features and other parts furnished by the manufacturer as part of the certified assembly. It is also determined that combustible walls and surfaces adjacent to or in contact with the appliance will not attain unsafe temperatures when the appliance is installed and used as directed.

Heating appliances are marked to indicate minimum clearances in inches, type of flooring, when they may be installed in an alcove or closet, and the total free area of the required air openings into a closet. Unless otherwise indicated, the designated clearances (other than "zero") are based on tests of units with uninsulated sheet-metal ducts and plenum attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit, ducts and plenum.

When the Certification Mark on an appliance designates the primary safety control to be used, such appliances are suitable for operation when a competent attendant may not be present provided the appliance is so equipped. The primary safety control is designated by the control group number in accordance with the plan and classification under Controls, Primary Safety (MCCZ).

The safety control to be used with the appliance will be indicated by either stating the manufacturer's name and marking of the particular control or controls to be used, or by stating the group number of the control to be used. When the group number is specified, the burner shall be provided with one of the controls classified as "Interchangeable." When a control manufacturer's name is specified with the group number, only the controls of that manufacturer classified in that group should be used.

Some burners are provided with integral primary safety controls or integral antiflooding devices and, when such controls are provided, the Certification Mark will specify "Integral" with or without the group designation, in which case only the control included as part of the appliance by the manufacturer shall be used.

For convenience, the primary safety control manufacturers' names will be abbreviated by using the first letter of each word in their corporate name when necessary to refer to them in the individual certifications.

When the Certification Mark on an appliance includes the statement "For Operation Only in Presence of Competent Attendant," such appliances are not furnished with primary safety controls and are intended for operation only in the presence of a competent attendant.

The Certification Mark applied to an oil-burning appliance designates the ANSI/ASTM D396 grade number of the fuel oil, or other fuel, for which the appliance is certified.

If the appliance is also investigated in accordance with a standard other than a UL Standard, the marking on the appliance includes the designation of that standard.

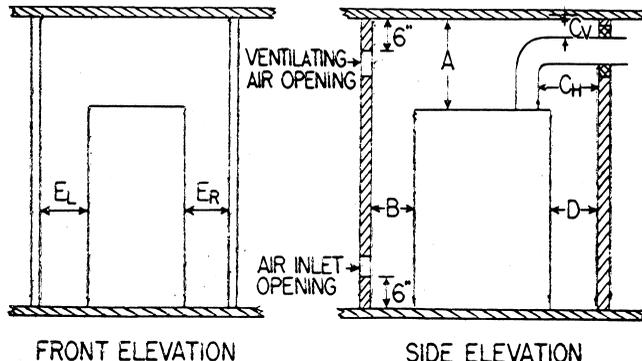

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BOILER ASSEMBLIES (KVFT)

USE AND INSTALLATION

This category covers gas-, gas-oil-, and oil-fired boiler assemblies intended for installation on the type of floors and with clearances to combustible construction not less than indicated on the boiler assembly. They are provided with primary safety controls as indicated in the boiler assembly Listing Mark or in the burner Listing Mark and with limit controls.

The sketches, dimension symbols and abbreviations as illustrated below are referenced in the individual Listings to indicate minimum clearances in inches, type of flooring, when an appliance may be installed in an alcove or closet, and the total free area of the required air openings into a closet. This information is also marked on the appliance. The clearances so designated are the minimums required to avoid overheating; additional clearances may be needed for accessibility.

Installation Symbols and Abbreviations

Descriptions of symbols and abbreviations applicable to the installation of boiler assemblies are as follows:

- A - Clearance above top of boiler
- B - From front of boiler. Prefix "C" to numeral indicates suitability for closet or alcove installation; prefix "A" indicates suitability for alcove installation only
- C_H - From chimney or vent connector measured horizontally or below pipe
- C_V - From chimney or vent connector measured vertically above pipe
- D - From back of boiler
- E_L - From left side of boiler
- E_R - From right side of boiler
- F - Indicates type of flooring: NC = Noncombustible, C = Combustible
- G - Total minimum free area, in square inches, of air openings into a closet

Typical Installation Clearances for Gas-, Gas-Oil-, and Oil-fired Boiler Assemblies

When a gas-, gas-oil-, or oil-fired boiler assembly is Listed for typical installation clearances, the individual Listings refer to the Form designation; when the clearances are not typical, each clearance is indicated by the appropriate symbols in the individual Listings. If a boiler assembly Listed for alcove or closet installation is installed in a room which is large in relation to the size of the boiler assembly, it may be installed at the minimum clearances specified for closet and alcoves or as indicated by the designated optional Form.

Form designations for typical installation clearances for gas-, gas-oil-, and oil-fired boiler assemblies installed in rooms are as follows:

Form	Standard Minimum Clearances (in.)							
	A	B	C _H	C _V	D	E _L	E _R	F
II	6	24	18	18	6	6	6	NC
IIa	6	24	18	18	6	6	6	C

HEATING APPLIANCES (KTCR)

Boiler Assemblies (KVFT)—Continued

Form	Standard Minimum Clearances (in.)							F
	A	B	C _H	C _V	D	E _L	E _R	
III	18	48	18	18	18	18	18	NC
IIIa	18	48	18	18	18	18	18	C
IV	48	96	36	36	36	36	36	NC
IVa	48	96	36	36	36	36	36	C
XII	6	18	6	6	6	6	6	NC
XIIa	6	18	6	6	6	6	6	C

Gas-, gas-oil-, and oil-fired boiler assemblies Listed for Forms II, IIa, III, and IIIa are low-heat appliances; those Listed for Forms IV and IVa are medium-heat appliances, all of which are intended to be flue connected to suitable chimneys

Gas-, gas-oil-, and oil-fired boiler assemblies Listed for Forms XII and XIIa and those Listed for Form III and IIIa equipped with draft hoods are low-heat gas appliances suitable for venting to Type B vents for gas appliances

Solid-fuel-fired boiler assemblies are intended for installation on the type of floor and with clearances to combustible construction from sides, rear, front and chimney connector not less than indicated on the boiler assembly. The chimney connectors should be connected to a chimney suitable for use with residential type and building heating appliances that burn solid fuel.

Solid-fuel-fired boiler assemblies are intended for installation on the type of floor and with clearances to combustible construction from sides, rear, front and chimney connector not less than indicated on the boiler assembly. The chimney connectors should be connected to a chimney suitable for use with residential type and building heating appliances that burn solid fuel.

Waste-heat-recovery boiler assemblies are intended for installation on the type of floor and with clearances to combustible construction from sides, rear, front and chimney connector not less than indicated on the boiler assembly. The chimney connector should be connected to a suitable chimney.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Field-erected Boiler Assemblies (KVQE)

USE AND INSTALLATION

This category covers gas-, oil-, and gas-oil-fired boiler assemblies intended to be assembled in the field by qualified service personnel.

By design, the boiler consists of factory-built subassemblies or segments (as described below) and is furnished with appropriate controls and detailed instructions to accommodate assembly and installation, and markings pertaining to clearances, types of adjacent surfaces, and proper vent installation, in addition to the appropriate NFPA standards, the "International Mechanical Code," and/or the "Uniform Mechanical Code," as applicable, and local codes and regulations.

Factory-built subassemblies or segments consist of, but are not limited to:

- pressure vessel
- combustion chamber
- tube sheets: front, rear and intermediate as required
- flue tubes
- front and rear smoke boxes
- rear-access plug
- burner-mounting plug
- boiler-mounting base
- steel casing and insulation package
- all necessary pressure-vessel tapings, manways, hand-holds
- carton(s) containing required waterside controls
- carton(s) containing sufficient amount of welding rod, flexible and/or rigid steel conduit and appropriate connectors, sufficient amount of wiring for connection of waterside controls (may be a wiring harness), electrical connectors, paint, labels and instruction plates

The boiler-pressure vessel is required to be designed, assembled, tested and inspected in accordance with the requirements of Section I or Section IV of the "ASME Boiler and Pressure Vessel Code." Conformance with the code is determined by application of the "H" or "S" stamp and, if applicable, the "A" symbol stamp on the appropriate part of the boiler assembly.

The boiler may be furnished either with an integral burner or intended for installation with a factory-built burner to accommodate the boiler as indicated in the individual certifications.

Field-erected boilers undergo a final inspection following completion of field assembly, ASME code-required testing and inspection, and opera-

HEATING APPLIANCES (KTCR)

Field-erected Boiler Assemblies (KVQE)—Continued

tional testing. The inspection covers all points required by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted with regard to the inspection of field-erected boiler assemblies.

MAX INPUT OIL _____ GALS PER HOUR
REFER TO BURNER LABEL FOR CONTROL AND FIELD SPECIFICATIONS

A field-erected gas-, oil-, or gas-oil-fired boiler assembly that includes the burner as an integral part of the front head assembly bears product information similar to (A).

A field-erected boiler assembly designed for installation with a certified burner bears product information similar to (B), which applies to the boiler only. The burner bears separate product information as described for gas burners (see Commercial/Industrial Gas Burners [KXWT]), oil burners (see Oil Burners [KYXZ]) or gas-oil burners (see Gas-Oil Burners [KYKR]). The proper assemblies of boilers and burners to make unit assemblies are as specified in the product information for the boiler.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names and information as appropriate:

- (A) "Gas-fired (or Oil-fired or Gas-Oil-fired) Field-erected Boiler Assembly. For Use With Integral Primary Safety Controls."
(B) "Field-erected Boiler Assembly. For Use Only With [Company Name] Listed Gas (or Oil or Gas-Oil) Burner Model(s) _____. Max Input Gas _____ BTU Per Hour (Oil _____ Gals. Per Hour). Refer to Burner Label for Control and Fuel Specifications."

A field-erected gas-, oil-, or gas-oil-fired boiler assembly that includes the burner as an integral part of the front head assembly bears a Listing Mark with the product name and information similar to (A).

A field-erected boiler assembly designed for installation with a Listed burner bears a Listing Mark with the product name and information similar-

PRODUCT CATEGORIES BY CATEGORY CODE

Field-erected Boiler Assemblies (KVQE)—Continued

lar to (B), which covers the boiler only. The burner bears a separate Listing Mark as described for gas burners (see KXWT), oil burners (see KYXZ) or gas-oil burners (see KYKR). The proper assemblies of boilers and burners to make unit assemblies are as specified in the boiler Listing Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING AND COOLING EQUIPMENT (LZFE)

GENERAL

This category covers various types of heating and cooling equipment typically used for space conditioning.

Individual categories following the **GENERAL INFORMATION** section below are identified for each type of equipment. Not all statements in **GENERAL INFORMATION** are applicable to all types of equipment covered under this category; only the statements that are identified are applicable. Refer to the individual categories for the general information that is applicable.

Wiring Termination Provisions

For permanently connected equipment, the wiring termination provisions are based on tests during product investigation, and Table 310.15(B)(16) of ANSI/NFPA 70, "National Electrical Code" (NEC) as follows:

1. 75°C insulated conductors at the 75°C ampacities.
2. 90°C insulated conductors at the 75°C ampacities in which case the equipment is marked for 90°C conductors.
3. Insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

Also see **IV. INSTALLATION REQUIREMENTS** (Appliance and Utilization Equipment Terminations) under Electrical Equipment for Use in Ordinary Locations (AALZ) and **VIII. ELECTRICAL INSTALLATIONS** under Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

GENERAL INFORMATION

Product Types

1. The following defines the types of systems covered in the individual categories below:

- A. Self-contained** — Refrigeration system in one section, factory assembled, with refrigerant charge and tested for leaks.
- B. Compressor Unit** — Includes one or more compressors with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit, and to a remote condenser having a marked working pressure not less than designated by the marking on the unit data plate. (The term is applicable both to refrigeration equipment of any size and also to air conditioning equipment. The term "air conditioning systems equipment, compressor unit" is used for air conditioning equipment rated over 135,000 Btu/h.)
- C. Compressor Condenser Unit** — Includes one or more compressors and condensers with interconnecting refrigerant piping and with associated controls and wiring. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit. (The term is applicable to air conditioning systems equipment only.)
- D. Compressor-Evaporator (Cooler) Unit** — Includes one or more compressors and evaporators (coolers) with interconnecting refrigerant tubing or piping and with associated controls and wiring. The unit is factory assembled and tested for leaks. The refrigerant type is marked on the unit and the operating refrigerant charge may or may not be provided as indicated on the unit nameplate. These units are intended for field connection to a remote condenser having a marked working pressure not less than designated by the marking on the unit data plate. (The term "compressor-evaporator" is applicable to air conditioning systems equipment and special-purpose air conditioners, and the term "compressor-cooler" is applicable to liquid chillers.)
- E. Compressor Evaporator/Condenser** — Refrigeration system in two sections, one including the compressor and the evaporator and the other, the condenser. The sections are intended to be installed remote from each other. The interconnecting refrigerant tubing may or may not be provided. The operating refrigerant charge may or may not be provided, as indicated on the compressor evaporator unit nameplate. Each section is tested for leaks. (The term is applicable to central cooling air conditioners and special-purpose air conditioners.)
- F. Condensing Unit/Evaporator (Outdoor/Indoor Unit)** — Refrigeration or air conditioning system in two sections, the condensing unit (or outdoor) section including the compressor and condenser and the other

section the evaporator (indoor section). The sections are intended to be installed remote from each other. The interconnecting refrigerant tubing may or may not be provided. The operating refrigerant charge may or may not be provided, as indicated on the condensing unit nameplate. Each section is tested for leaks. (The term "condensing unit/evaporator" is applicable to central cooling air conditioners and special-purpose air conditioners, and the term "outdoor/indoor unit" is applicable to heat pumps.)

G. Heating, Cooling and Ventilating Equipment — Intended for use as part of a complete system and, when installed, may be associated with other equipment and components that are separately certified. Unless indicated in the individual certifications for the other equipment, this equipment has not been investigated for operation when combined with other certified equipment in a complete system assembled in the field.

H. Condensing Unit — Includes one or more compressors and air- or water-cooled condensers with interconnecting refrigerant piping and with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit. (Same as "C" above, except the term is applicable to refrigeration equipment or to air conditioning equipment of any size.)

2. Heating and cooling equipment of the unitary type consists of one or more factory-built sections. If the equipment is provided in two or more sections, each such section is designed for field interconnection with a matched section(s) to make the heating and/or cooling equipment. Equipment provided in two or more sections is either marked to identify the appropriate sections for proper installation, or the designations of the sections comprising the assembly are shown in the individual certifications. Where so designated, a separately certified electric central heating furnace, fan-coil unit or fan unit may serve as a portion of the assembly.

3. Certified equipment is rated 600 V or less. Centrifugal type units as identified in the individual certifications are rated 7200 V or less.

Installation Codes

4. This equipment is intended to be installed in accordance with the requirements of the NEC.

5. Equipment to be connected to an air-duct system is intended for installation in accordance with the "International Mechanical Code," "International Residential Code," "Uniform Mechanical Code," ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," or ANSI/NFPA 90B, "Installation of Warm Air Heating and Air-Conditioning Systems."

6. Equipment with a gas-, oil-, or gas-oil-fired burner(s) is intended to be installed in accordance with appropriate National Fire Protection Association standards, including ANSI/NFPA 31, "Installation of Oil-Burning Equipment," ANSI Z223.1/NFPA 54, "National Fuel Gas Code," ANSI/NFPA 58, "Liquefied Petroleum Gas Code," or "International Fuel Gas Code."

7. For equipment intended to be installed in mobile homes, reference should be made to 24CFR3280, "Manufactured Home Construction and Safety Standards."

8. For equipment intended to be installed in recreational vehicles, reference should be made to ANSI/NFPA 1192, "Recreational Vehicles."

9. Equipment is marked with the refrigerant type used and some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems," but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Listing Reports (available from the manufacturer) identify installation requirements applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants.

The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 15 and have been determined to be nonflammable or practically nonflammable in accordance with the requirements in ANSI/UL 2182, "Refrigerants."

Wiring Diagrams

10. The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

Units Used with Duct Heaters

11. Unless otherwise indicated in the individual certifications, certified duct heaters that may be installed in conjunction with the equipment covered in the certifications should be installed at least 4 ft downstream from the equipment.

Field-installed Accessories

12. Heating and cooling equipment investigated for use with certified field-installed accessories, such as electric resistance heaters (including duct heaters), is specifically indicated in the individual certifications. See Accessories, Air Conditioning Equipment (ABFY) and Duct Heaters, Electric (KOHZ).

13. Units investigated for use with field-installed steam, hot water, or refrigerant coils or with electric resistance heaters (including certified accessories or duct heaters as noted in paragraph 11 above) are marked to so indicate.

Electric Heat Considerations

14. Units that incorporate factory- or field-installed electric resistance heaters are identified in the individual certifications.

Field-installed electric resistance heaters that have been investigated for use with the certified equipment at the time of certification, are identified on the heating and cooling equipment nameplate by manufacturer's name and part number, or are covered under Electric Heater Assemblies Certified for Use on Specified Equipment (LZPU).

15. Where a through-air clearance to combustible materials is required, the clearance is marked on the heating and/or cooling equipment and is designated in the individual certifications. The clearances are the minimum required to avoid overheating; additional clearances may be required for accessibility.

When zero clearance is specified, temperatures are measured directly on the unit cabinet with uninsulated sheet metal ducts and plenum attached. When clearances other than zero are specified, temperatures are measured on a wood test enclosure spaced at the specified clearances from the unit cabinet, ducts and plenum.

16. In heating and cooling equipment employing electric resistance heaters rated more than 48 A, the loads are subdivided so that each load does not exceed 48 A and is protected by overcurrent devices at not more than 60 A.

The overcurrent devices are either included as an integral part of the heating and cooling equipment or furnished as a separate assembly. If the overcurrent devices are furnished as a separate assembly, the unit is marked to specify that it is to be used with that particular separate assembly. For such separate assemblies specifically recognized for use with electric space heaters provided as part of this equipment, see **CONTROL PANELS FOR SPECIFIC ELECTRIC SPACE-HEATING EQUIPMENT** below. Other certified separate assemblies, as referenced on a marking on the heating and cooling equipment, may also be used.

Unit Installation

17. Unless otherwise specified in the marking on the equipment, the unit may be installed on combustible flooring.

18. Attic type units are so indicated in the individual certifications. Such units are suitable for installation in an attic or comparable normally unoccupied location as designated by the marking or instructions provided on the unit.

19. Units/Sections suitable for outdoor installation are so marked and identified in the individual certifications either by the term "outdoor section" or by an appropriate footnote. Units/Sections not marked as suitable for outdoor installation are for indoor use only.

Motor Group Installation

20. In permanently connected units employing two or more motors or a motor(s) and other loads operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Section 430.53(C) as referenced in Section 440.22 of the NEC. Such multimotor and combination load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating that does not exceed the value marked in the data plate. This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable. Where the marking specifies fuses, circuit breakers or overcurrent devices, the circuit is intended to be protected only by the type of protective devices specified.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

Alternatively, air conditioning systems, central cooling air conditioners (packaged and split system), heat pumps (packaged and split system), heat pump water heaters, accessories for heating and cooling equipment, accessories for air conditioning equipment, electric heater assemblies, dehumidifiers, and miscellaneous heating and cooling equipment single-phase appliances rated not more than 250 V, and all other appliances rated not more than 600 V are investigated to ANSI/UL 60335-1, "Safety of Household and Similar Electrical Appliances, Part 1: General Requirements," and ANSI/UL 60335-2-40, "Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers."

Other standards may also be used where specifically indicated in the individual categories below.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as shown in the following individual categories or in the individual Listings.

The Gas-fired Listing Mark of UL for gas-fired products includes the UL symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the product identity, and the standard designation as shown in the following individual categories or in the individual Listings.

ABSORPTION AIR CONDITIONING EQUIPMENT

GENERAL INFORMATION paragraphs 1A, 2, 3, 4, 5, 6, 9, 19 and 20 are applicable to this equipment.

This category covers equipment of the unitary type employing an absorption type refrigeration system, intended for commercial or domestic cooling, or heating and cooling of a liquid such as water or a water-antifreeze solution. This equipment is intended primarily, but not exclusively, for air conditioning application.

The direct energy source for cooling and heating is a hot fluid (such as gas, liquid or steam) as obtained from a source such as a solar-heat system or waste-heat, and/or gas-, oil-, or gas-oil-fired burners. Absorption air conditioning equipment provided with gas-, oil-, or gas-oil-fired burner(s) as the direct energy source for cooling and heating is covered under Absorption Air Conditioning Equipment (KTFV).

AIR CONDITIONING SYSTEMS EQUIPMENT, SELF-CONTAINED UNITS

AIR CONDITIONING SYSTEMS EQUIPMENT, COOLING PORTION OF SELF-CONTAINED UNITS

AIR CONDITIONING SYSTEMS EQUIPMENT, COMPRESSOR-EVAPORATOR UNITS

AIR CONDITIONING SYSTEMS EQUIPMENT, COMPRESSOR-CONDENSER UNITS

AIR CONDITIONING SYSTEMS EQUIPMENT, COMPRESSOR UNITS

GENERAL INFORMATION paragraphs 1A, 1B, 1C, 1D, 3, 4, 5, 6, 9, 10, 11, 12, 13, 15, 16, 17, 19 and 20 are applicable to this equipment.

This category covers equipment with a rated cooling capacity exceeding 135,000 Btu/h, intended for commercial or industrial central cooling applications. For equipment rated 135,000 Btu/h or less, see **AIR CONDITIONERS, CENTRAL COOLING or CONDENSING UNITS** below. For additional self-contained units incorporating gas-, oil-, or gas-oil-fired burners, see **HEATING AND COOLING UNITS** below.

Self-contained units and compressor-evaporator units may include heating means, including electric resistance heaters, gas-, oil-, or gas-oil-fired burners, or hot water or steam coils.

A gas-fired heating portion included in this category is for use only in the same manufacturer's specified air conditioning systems equipment as marked on the heating portion and as indicated in the individual certifications.

The basic standard used to investigate the refrigeration portion of the products in this category is ANSI/UL 1995. The basic standard used to investigate the gas heating portion of the products in this category is ANSI Z21.47/CSA 2.3, "Gas-Fired Central Furnaces."

The Gas-fired Listing Mark is provided either on a Listed self-contained unit or on a Listed gas-fired heating section or portion of a Listed self-contained unit.

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the words "Gas Heating Portion," and the standard designation "ANS Z21.47(+) CSA 2.3(+)(++) Central Furn."

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

AIR CONDITIONERS AND CENTRAL COOLING AIR CONDITIONERS

SECTIONS OF CENTRAL COOLING AIR CONDITIONERS ACCESSORIES FOR AIR CONDITIONERS

GENERAL INFORMATION paragraphs 1A, 1E, 1F, 2, 3, 4, 5, 7, and 9 through 20 inclusive are applicable to this equipment.

This category covers equipment of the unitary type for commercial or domestic applications.

Unitary air conditioners consist of one or more factory-made sections, as described under **GENERAL INFORMATION**. Unless so indicated in the individual certifications, the evaporator blower is provided as part of the assembly, and may be an integral part of the evaporator section or furnished as a separate section.

CONDENSING UNITS

COMPRESSOR UNITS

ACCESSORIES FOR CONDENSING UNITS

ACCESSORIES FOR COMPRESSOR UNITS**ACCESSORIES FOR CONDENSING OR COMPRESSOR UNITS**

GENERAL INFORMATION paragraphs 1B, 1H, 3, 4, 9, 13, 19 and 20 are applicable to this equipment.

This category covers units intended for refrigeration service of any Btu per hour capacity. For units intended primarily for air conditioning applications, see **AIR CONDITIONING SYSTEMS EQUIPMENT** (rated more than 135,000 Btu/h) or **CENTRAL COOLING AIR CONDITIONERS** above.

This equipment is intended to be installed in air conditioning and refrigeration systems.

Some condensing units or compressor units included in this category are intended for field connection to multiple refrigeration systems and include multiple condensing units, compressor units or compressors, with single or multiple condensers, with associated piping, controls, and wiring, mounted on a common frame or in a common housing.

The acceptability of operation of these units, when associated with other components of a complete system, has not been investigated.

These units are intended to be used only in systems with the specified refrigerant and operating at pressures not in excess of those indicated by the marked test pressures.

GENERAL-PURPOSE CONTROL PANELS FOR ELECTRIC SPACE-HEATING EQUIPMENT**CONTROL PANELS FOR SPECIFIC ELECTRIC SPACE-HEATING EQUIPMENT**

GENERAL INFORMATION paragraphs 3 and 4 are applicable to this equipment.

This category covers electrical panels incorporating control and/or overcurrent devices intended specifically for remote use with electric space-heating equipment, including air conditioning equipment with electric resistance space heaters.

Overcurrent protective devices in these panels are intended to provide overcurrent protection in accordance with Section 424.22(C) of the NEC.

Unless otherwise specified in the manufacturer's installation instructions, these panels are intended to be mounted remote from the space-heating equipment, in a location where they will not be affected by heat or condensation from operation of the equipment.

The proper installation of these panels requires careful consideration of the individual manufacturer's installation instructions and wiring diagrams.

General purpose panels are not limited to use with specific makes and models of space-heating equipment. These panels are provided with installation instructions and wiring diagrams showing supply connections, connections to the space-heating equipment, and control-circuit connections to be completed at the time of installation.

General purpose panels containing only overcurrent devices or only magnetically operated switching devices are covered under Panelboards (QEU) and Industrial Control Equipment (NIMX), respectively.

Panels to be used only with specific certified equipment are so identified and the equipment marked to require the particular panel. The installation instructions and wiring diagrams for these panels may be provided with the panel or may be provided only with the certified space-heating equipment.

For control panels for specific electric space-heating equipment, see the equipment nameplate and installation instructions.

DEHUMIDIFIERS

GENERAL INFORMATION paragraphs 1A, 3, 4, 5, 6, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19 and 20 are applicable to this equipment. This category covers duct-mounted and permanently connected, self-contained household, commercial and industrial dehumidifiers for use in removing moisture from the air. These dehumidifiers employ hermetic refrigerant motor-compressors and may also incorporate electric air heaters.

ELECTRIC CENTRAL HEATING FURNACES**SECTIONS OF ELECTRIC CENTRAL HEATING FURNACES**

GENERAL INFORMATION paragraphs 2, 4, 5, 7, 8, 9, 15, 16 and 20 are applicable to this equipment.

This category covers electrically operated central heating furnaces intended for use in space-heating applications in homes and other types of buildings, including mobile homes and recreational vehicles, as indicated in the manufacturer's installation instructions.

Warm-air furnaces have provision for connection to a duct system, except furnaces intended only for installation in a single-story residence need not have provision for connection of a return air duct.

Each electric central heating furnace is provided with an individual marking and instructions. If a noncombustible floor material is required, the necessary clearances to combustible constructions and proper installation in an alcove or closet are specified in the marking and/or instructions.

Furnaces consist of one or more factory-built sections. Equipment provided in more than one section is designed for field interconnection of matched sections to make the complete assembly. The individual sections that comprise the assembly are identified in the individual certifications and by a cross-reference marking on at least one of the sections.

Furnaces investigated for use with a field-installed refrigerant coil are so identified in the individual certifications, and the refrigerant coil(s) for such use are identified by a marking on the furnace. Tests of furnaces with these

field-installed coils intended for cooling, or with integral factory-installed coils intended for cooling, have indicated no adverse effects on the furnace.

The assembly of a furnace with a field- or factory-installed refrigerant coil to a condensing unit of a central cooling air conditioner has been investigated only for those specific combinations identified in the individual certifications as "Air Conditioners, Central Cooling," or for those specific condensing units identified by a marking on the furnace.

The assembly of a furnace with a field- or factory-installed refrigerant coil to an outdoor section of a heat pump has been investigated only for those specific combinations identified in the individual certifications as "Heat Pumps." The effect of refrigerant heating on the furnace has not been investigated for other combinations.

ENVIRONMENTAL AIR TERMINAL UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 5, 9, 10, 11, 12, 13, and 15 through 20 inclusive are applicable to this equipment.

This category covers fixed appliances that include a motor-operated fan or blower with or without electric resistance heaters. The appliances are intended to be installed in accordance with the manufacturer's installation instructions in plenums above hung (suspended) ceilings where the inlet air to the appliance is taken from this plenum space in accordance with Section 300.22(C) of the NEC.

The air outlet may be free discharge or be ducted to ceiling diffusers.

FAN-COIL UNITS**SECTIONS OF FAN-COIL UNITS
ACCESSORIES FOR FAN-COIL UNITS**

GENERAL INFORMATION paragraphs 1G, 2, 3, 4, 5, and 9 through 20 inclusive are applicable to this equipment.

This category covers appliances that include a motor-operated fan or blower together with a cooling coil, a heating coil, or both, and may also include an electric heater. The fan or blower is designed to recirculate air or to draw in outside air, or both. The coil may be designed for refrigerant cooling, for refrigerant heating, for chilled water cooling, for hot water heating, for steam heating, or for combinations of these functions.

A fan-coil unit is intended to be piped to a remote source of heat, of cooling, or of both. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply lines.

Equipment intended for use with hot water is marked for a maximum inlet water temperature.

Equipment intended for use with steam is marked for a maximum inlet steam pressure.

Fan-coil units intended to be installed in accordance with the manufacturer's installation instructions in plenums above hung (suspended) ceilings where the inlet air to the appliance is taken from this plenum space in accordance with Section 300.22(C) of the NEC are marked, "This unit is suitable for installation in plenums above hung (suspended) ceilings."

A fan-coil unit containing a refrigerant coil that has been additionally investigated as part of a specific split-system cooling air conditioner, special-purpose air conditioner or heat pump, is also identified as part of that system in the individual certifications as "Air Conditioners, Central Cooling," "Air Conditioners, Special Purpose" or "Heat Pumps."

A fan-coil unit, as covered by these requirements, may be designed for free delivery of air to the room or may be provided with means for duct connection. Representative types include floor-mounted, wall-mounted, ceiling-hung, and wall- or ceiling-insert (built-in) units.

A room-type unit is designed to circulate air to the conditioned space directly, or by means of duct work having a static-pressure drop not exceeding 0.05 in. of water.

Units that are similar to fan-coil units with electric resistance heaters, but not provided with a refrigerant, steam or water coil, are identified in the individual certifications as "Room Fan Heater Units."

FAN UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 5, 9, 10, 12, 13, and 15 through 20 inclusive are applicable to this equipment.

This category covers equipment intended to be connected to a duct system that supplies conditioned air for environmental heating and/or cooling. The units consist of a motor-operated fan or blower and may have air control dampers. The units may be thermostatically operated by integral or remote controls. The units do not include factory-installed heat exchangers or other integral heating or cooling means.

Fan units with field-installed heater accessories as detailed in paragraph 12 under **GENERAL INFORMATION** are the equivalent of "Electric Central Heating Furnaces."

Units intended for use in duct systems with air temperatures exceeding normal room ambient temperature are marked with the maximum inlet air temperature rating.

Other types of fans for duct connection are covered under Fans, Electric (GPV) and Ventilators, Power (ZACT).

HEAT PUMPS**SECTIONS OF HEAT PUMPS****ACCESSORIES FOR HEAT PUMPS**

GENERAL INFORMATION paragraphs 1A, 1F, 2, 3, 4, 5, 7, and 9 through 20 inclusive are applicable to this equipment.

This category covers reverse cycle unitary air conditioning systems for comfort heating and cooling (or for comfort heating only), if so indicated in the individual certifications.

**HEAT PUMP WATER HEATERS
HEAT PUMP SWIMMING POOL HEATERS
HEAT PUMP SPA HEATERS**

**SECTIONS OF HEAT PUMP WATER HEATERS
ACCESSORIES FOR HEAT PUMP WATER HEATERS**

GENERAL INFORMATION paragraphs 2, 3, 4, 9, 10 and 20 are applicable to this equipment.

This category covers products intended to heat water utilizing the heat of rejection from a mechanical refrigeration system and optional accessories for these products. These products are designed to restrict the outlet water temperature to a maximum of 85°C (185°F) under normal operation conditions and to a maximum of 99°C (210°F) under abnormal conditions.

These units may include an integral storage tank or may be designed for connection to a separate tank and may also include electric resistance heaters to heat the water. For those units that include an integral tank, see Water Heaters, Household, Storage Tank (KSDT) for additional information.

See Heaters (WBRR) for additional information on heat pump pool and spa heaters.

HEATING AND COOLING UNITS

COOLING PORTIONS OF HEATING AND COOLING UNITS

GENERAL INFORMATION paragraphs 1A, 3, 4, 5, 6, 9, 10, 15, 19 and 20 are applicable to this equipment.

This category covers self-contained assemblies manufactured for installation as a package. They include all the necessary components needed for both heating and cooling. Heating is by gas-, oil-, or gas-oil-fired burner(s), and by incorporating a heat pump system. Cooling and heat-pump heating is by mechanical refrigeration with any rated cooling/heating capacity.

The information pertaining to safe placement is indicated in the individual certifications.

The name and amount of refrigerant, test pressure, and electrical rating appear on the unit.

A gas-fired heating portion included in this category is for use only in the same manufacturer's specified air conditioning or heat pump systems equipment as marked on the heating portion and as indicated in the individual certifications.

The basic standard used to investigate the gas heating portion of the products in this category is ANSI Z21.47/CSA 2.3, "Gas-Fired Central Furnaces."

The Gas-fired Listing Mark is provided either on a Listed heating and cooling unit or on a Listed gas-fired heating section or portion of a Listed heating and cooling unit.

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the words "Gas Heating Portion," and the standard designation "ANS Z21.47(+) CSA 2.3(+)(++) Central Furn."

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

**LIQUID CHILLERS, SELF-CONTAINED UNITS
LIQUID CHILLERS, COMPRESSOR-COOLER UNITS
AIR CONDITIONING LIQUID CHILLERS**

SECTIONS OF AIR CONDITIONING LIQUID CHILLERS

GENERAL INFORMATION paragraphs 1A, 1D, 2, 3, 4, 6, 9, 10, 19 and 20 are applicable to this equipment.

This category covers equipment intended for cooling of liquid, such as water or water-antifreeze solutions. The equipment is intended primarily, but not exclusively for, air conditioning application.

Air conditioning liquid chillers rated 135,000 Btu/h or less are of the unitary type. Liquid chillers with a rated cooling capacity exceeding 135,000 Btu/h may be either self-contained units or compressor-cooler units.

Drinking water coolers, commercial processing water coolers, and other liquid chillers investigated only for commercial refrigeration applications other than air conditioning are covered under Refrigeration Equipment (SCER).

Absorption air conditioning equipment that utilizes hot fluid (such as gas, liquid or steam) as the direct energy source for cooling and heating is identified in the individual certifications as "Absorption Air Conditioning Equipment."

Absorption air conditioning equipment provided with a gas-, oil-, or gas-oil-fired burner(s) as the direct energy source for cooling and heating is covered under Absorption Air Conditioning Equipment (KTFV).

**MECHANICAL DRAFT WATER COOLING TOWERS
ACCESSORIES FOR MECHANICAL DRAFT WATER COOLING TOWERS**

GENERAL INFORMATION paragraphs 1G, 3, 4, 9, 10, 19 and 20 are applicable to this equipment.

This category covers equipment intended for use with water-cooled air conditioning and refrigeration equipment. The water used as a cooling medium may contain antifreeze, and is circulated through the tower via either a finned tube assembly or a system that is open to the atmosphere. The tower includes a motor-driven fan or blower and may also include circulation pumps.

Equipment investigated for use with certified accessories, such as pump assemblies, is marked to identify the accessories and is also identified in the individual certifications.

REFRIGERANT CONDENSERS

GENERAL INFORMATION paragraphs 3, 4, 9, 10, 19 and 20 are applicable to this equipment.

This category covers finned tube assemblies incorporating a motor driven fan that are intended to liquefy refrigerant vapor by removal of heat.

Evaporative or water-cooled devices are covered under Condensers, Refrigerant (SLSV).

ROOM AIR TERMINAL UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 5, 9, 10, 12, 13, and 15 through 20 inclusive are applicable to this equipment.

This category covers units designed to be connected to the terminal end of a single duct or duct system supplying air from a remotely located air-handling unit for the purpose of providing heating, ventilation and/or cooling.

The unit types include floor-mounted, wall-mounted, ceiling-hung, and wall- or ceiling-insert constructions.

Units incorporating electric heat have an automatic resetting temperature limiting control that is intended to protect against abnormal operating conditions and, in addition, each unit is provided with a replaceable thermal cutoff or a manually resettable temperature limiting control. In addition to ANSI/UL 1995, the standard used to investigate units incorporating electric heat is ANSI/UL 1996, "Electric Duct Heaters."

The proper installation of these units requires careful consideration of the individual manufacturer's design characteristics, taking into consideration the volume of air passing through the units and the temperature of the input air.

The manufacturer's application and installation instructions furnished with each unit should be consulted to determine the factors appropriate to the particular installation including required distances between the unit and turns in the duct, changes in duct sizes, air filters, humidifiers, etc. Unless these instructions specify other distances for horizontals or upflow installations, 1) turns in the duct on the inlet side of the unit should be at least 4 ft from the unit, 2) turns in the duct on the outlet side of the unit should be at least 2 ft from the unit, and 3) changes in duct size, air filters, humidifiers, etc. should be located at least 4 ft from either side of the unit.

Units incorporating electric heat may have provision for interlocking the air supply and the electric element circuit.

Units may include provision for a coil designed for cooling by refrigerant or chilled water, or heating by steam or hot water, or for combinations of such coils.

ROOM FAN HEATER UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 5, 9, 10, 11, 12, 13, and 15 through 20 inclusive are applicable to this equipment.

This category covers fixed appliances that include a motor-operated fan or blower and electric resistance heater, or an electrically heated heat exchanger.

These appliances are designed to serve a single room or space. Included are units similar to fan-coil units with electric resistance heaters but which are not provided with a refrigerant, steam or water coil, and units similar to air heaters, but which draw in air from outside the heated space. Air heaters are covered under Air Heaters, Room, Fixed and Location Dedicated (KKWS).

A room fan heater may be designed for free delivery of air to the room, or may be provided with a means for connection of a short extension duct. Representative types include floor-mounted, wall-mounted, ceiling-hung, and wall- or ceiling-insert (built-in) units.

Information concerning required installation clearances, etc. is designated in markings and/or installation instructions as indicated under **GENERAL INFORMATION**. This information also appears in the individual certifications.

SPECIAL-PURPOSE AIR CONDITIONERS

SECTIONS OF SPECIAL-PURPOSE AIR CONDITIONERS

ACCESSORIES FOR SPECIAL-PURPOSE AIR CONDITIONERS

GENERAL INFORMATION paragraphs 1A, 1D, 1E, 1F, 2, 3, 4, 9, 10, 12, 15, 16, 17, 19 and 20 are applicable to this equipment.

This category covers equipment designed for special purposes, such as environmental control of computer rooms.

This equipment consists of one or more factory-made sections, as described under **GENERAL INFORMATION**. Unless so indicated in the

individual certifications, an evaporator blower is provided as part of the assembly, and may be an integral part of the evaporator section or be furnished as a separate section.

Computer-room air conditioners are intended for installation in accordance with ANSI/NFPA 75, "Fire Protection of Information Technology Equipment." These air conditioners are generally installed on the raised floors of computer rooms and have not been investigated for connection to ducts unless so specified in the individual certifications.

Factory-installed electric heaters and humidifiers have been investigated for this application.

VENTILATING UNITS

SECTIONS OF VENTILATING UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 5, 9, 10, 11, 12, 13, and 15 through 20 inclusive are applicable to this equipment.

This category covers units that consist of electric resistance heaters and a motor-operated blower. The units may also incorporate means for evaporative cooling. These units are intended to supply heated and/or cooled air to commercial and industrial buildings from which air is being exhausted by other equipment. There is no provision for return-air circulation on these units.

Information concerning required installation clearances, etc. is designated in markings and/or installation instructions as indicated under **GENERAL INFORMATION**. This information also appears in the individual certifications.

MISCELLANEOUS HEATING AND COOLING EQUIPMENT

GENERAL INFORMATION paragraph 4 is applicable to this equipment. This category covers miscellaneous heating and cooling equipment.

HEATING AND COOLING EQUIPMENT ACCESSORIES

GENERAL INFORMATION paragraph 4 is applicable to this equipment. This category covers accessories intended for installation only on certified heating and cooling equipment as designated in the individual certifications of the equipment and accessories. The accessories are intended primarily for field installation, but may be factory installed.

The equipment on which these accessories may be field installed is marked to indicate that it is certified for use with the specific accessory as designated by model, catalog number, part number, etc. in this category. Markings on the equipment also indicate any changes in the equipment ratings with the accessory installed.

Information concerning field wiring connections, mounting location, installation clearances, etc., are marked on the accessory, and/or in detailed installation instructions accompanying each accessory.

RELATED PRODUCTS

Products Verified for energy efficiency are covered under Heating and Cooling Equipment Verified for Energy Efficiency (ZWQL).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DUCTLESS HEATING AND COOLING EQUIPMENT, LARGE, OPEN BUILDING (LZPG)

GENERAL

This category covers ductless heating and cooling equipment intended to serve a single, large, open area, such as a warehouse. These are encased assemblies designed as a unit and intended as the prime source of heating, cooling and dehumidification.

INSTALLATION

This equipment is rated 600 V ac or less and is intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

Ductless heating and cooling equipment is custom built to the customer's specifications. This equipment may be installed in the conditioned airspace or outdoors; when installed outdoors, provisions, such as a short duct, are provided for serving the adjacent space. This equipment has a heating range from 10,000 to 18,000,000 Btu's, a cooling capacity range up to 1,000 tons, and an air circulation of 1,000 to 200,000 cfm. The heat sources include electric, gas, hot water, oil or steam. Each unit provided with electric, gas-fired or oil-fired heat incorporates integral limit controls intended to protect against abnormal operating conditions, which might arise from blocked inlets, blocked outlets, or fan failures. The limit control will not allow a discharge air temperature during all the normal, abnormal and back-up tests of 150°F (65.56°C).

After assembly on the production line, each unit will have tests conducted before it leaves the factory, and additional tests will be performed again once the unit has been installed at the site by a factory representative.

Ductless heating and cooling equipment is made up of three basic modules and optional extensions that are field erected in a stacked configuration. By design, the equipment consists of factory-built subassemblies or

Ductless Heating and Cooling Equipment, Large, Open Building (LZPG)—Continued

modules and furnished with appropriate controls and detailed instructions to accommodate assembly and installation with applicable codes.

The lowermost module is the **air base**, containing one or more propeller fans lying horizontal and, if specified, optional inlet filters. The air base unit has prewired power and control panel(s). These panels contain a power disconnect switch and motor starters, control relays and temperature controls. The selector controls and toggle switches are generally located inside of the control panel or vertically mounted on the side.

The second module is the **heat/cool section** that may consist of a cooling portion and/or a heating portion. The cooling portion consists of a refrigeration or chilled water heat exchanger coil. The heating portion may consist of one of the following options: (1) a certified commercial/industrial gas burner (see KXWT), oil burner (see KYXZ) or gas-oil burner (see KYKR) with an air-to-air heat exchanger, (2) a certified electric duct heater (see KOHZ), or (3) a hot water or steam heat exchanger. The boiler may be furnished either with an integral burner or intended for installation with a factory-built burner to accommodate the boiler as indicated in the individual certifications.

Normally the third module in the stacked configuration is the **air outlet** module; however, an **extension(s)** is frequently used to raise the discharge above items that surround the unit. The air outlet module is the uppermost module of the stacked configuration and may contain optional louvers that are capable of directing air in a specific direction.

This equipment is intended to employ other equipment and components, which are separately certified. Each piece of equipment has been factory tested prior to leaving the manufacturer's facility, and a factory-trained technician conducts the startup of each unit.

For fuel-fired heaters, the minimum clearance to combustible materials is 48 in. from the front side (burner side) and 18 in. from all other sides, including the top side. Fuel-fired heaters should not be mounted directly on a combustible floor.

For electric-duct-heater-supplied units, the minimum clearance to combustible materials is 48 in. from the front side (control panel side) and 18 in. from all other sides, including the top side. Electric-duct-heater-supplied units should not be mounted directly on a combustible floor.

Unless otherwise specified in the individual certifications and product marking, the unit may be installed on combustible flooring.

In units rated more than 48 A and employing electric resistance heaters, the loads are subdivided so that each load does not exceed 48 A and is protected at no more than 60 A. The overcurrent protective devices are either included as an integral part of the unit or are furnished as a separate assembly. If the protective devices are furnished as a separate assembly, the unit is marked to specify that it be used with that particular separate assembly. For such separate assemblies which are specifically certified for use with electric space heaters provided as part of this equipment, see Control Panels, Remote, for Electric Duct Heaters (KMLW). Other certified separate assemblies, as referenced on the equipment marking, may also be used.

In units employing two or more motors or a motor and an electric space heater operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor-circuit components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Sec. 430.53(C) of the NEC. Such multimotor and combination load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating that does not exceed the value marked on the data plate. This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable. Where the marking specifies fuses or "HACR Type" circuit breakers, the circuit is intended to be protected only by the type of protective device specified.

Equipment suitable for outdoor installation is so marked. Equipment not marked as suitable for outdoor installation is for indoor use only.

Wiring Termination Provisions

For permanently connected equipment, the wiring termination provisions are based on tests during product investigation, and Table 310.15(B)(16) of the NEC as follows:

1. 75°C insulated conductors at the 75°C ampacities.
2. 90°C insulated conductors at the 75°C ampacities, in which case the equipment is marked for 90°C conductors.
3. Insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

Also see **INSTALLATION REQUIREMENTS** (Appliance and Utilization Equipment Terminations) under Electrical Equipment for Use in Ordinary Locations (AALZ) and **ELECTRICAL INSTALLATIONS** under Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

Installation Codes

Equipment with a gas-, oil-, or gas-oil-fired burner(s) is intended to be installed in accordance with appropriate National Fire Protection Association standards, including ANSI/NFPA 31, "Installation of Oil-Burning

Ductless Heating and Cooling Equipment, Large, Open Building (LZPG)—Continued

Equipment,” ANSI Z223.1/NFPA 54, “National Fuel Gas Code,” or ANSI/NFPA 58, “Liquefied Petroleum Gas Code.”

Equipment is marked with the refrigerant type used and some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15 (2004), “Safety Standard for Refrigeration Systems,” but are included in ANSI/ASHRAE 34 (2004), “Designation and Safety Classification of Refrigerants.” The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15 (2004), UL’s Certification Reports (available from the manufacturer) identify installation requirements applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 (2004) for currently used refrigerants.

The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 15 (2004) and have been determined to be nonflammable or practically nonflammable in accordance with the requirements in ANSI/UL 2182, “Refrigerants.”

Wiring Diagrams

The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

PRODUCT IDENTITY

The following product identity appears on the product:

Ductless, Large, Open Building Heating and Cooling Equipment

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1995, “Heating and Cooling Equipment.”

Alternatively, single-phase appliances rated not more than 250 V, and all other appliances rated not more than 600 V are investigated to ANSI/UL 60335-1, “Safety of Household and Similar Electrical Appliances, Part 1: General Requirements,” and ANSI/UL 60335-2-40, “Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers.”

The basic standard used to investigate electric duct heaters is ANSI/UL 1996, “Electric Duct Heaters.”

The basic standard used to investigate commercial/industrial gas burners is UL 795, “Commercial/Industrial Gas Heating Equipment.”

The basic standard used to investigate oil burners is ANSI/UL 296, “Oil Burners.”

The basic standards used to investigate domestic gas-oil burners with gas-fired inputs up to and including 400,000 Btu/h (117.23 kW) are the current edition and effective addenda thereto of ANSI Z21.17/CSA 2.7, “Domestic Gas Conversion Burners,” and ANSI/UL 296.

The basic standards used to investigate commercial/industrial gas-oil burners with gas-fired inputs over 400,000 Btu/h (117.23 kW) are UL 795 and ANSI/UL 296.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

A separate Certification Mark is provided on certified electric duct heaters (see Duct Heaters, Electric [KOHZ]), commercial/industrial gas burners (see Commercial/Industrial Gas Burners [KXWT]), oil burners (see Oil Burners [KYXZ]) or gas-oil burners (see Gas-Oil Burners [KYKR]) when employed in the heating module of the ductless, large, open building heating and cooling equipment. Refer to the individual product categories for the appropriate Certification Marks.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Ductless, Large, Open Building Heating and Cooling Equipment.”

A separate Listing Mark is provided on Listed electric duct heaters (see Duct Heaters, Electric [KOHZ]), commercial/industrial gas burners (see Commercial/Industrial Gas Burners [KXWT]), oil burners (see Oil Burners [KYXZ]) or gas-oil burners (see Gas-Oil Burners [KYKR]) when employed in the heating module of the ductless, large, open building heating and cooling equipment. Refer to the individual product categories for the appropriate Listing Marks.

Ductless Heating and Cooling Equipment, Large, Open Building (LZPG)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING AND COOLING EQUIPMENT RETROFIT ASSEMBLIES CERTIFIED FOR USE WITH OTHER MANUFACTURERS’ EQUIPMENT (LZPK)

USE AND INSTALLATION

This category covers retrofit assemblies consisting of parts and/or subassemblies intended for field installation by qualified service personnel in UL-certified heating and cooling equipment (see Heating and Cooling Equipment [LZFE]) that involves modifying, revising, or replacing of parts and/or subassemblies internal to the certified equipment. These products have been investigated to determine that, when installed in accordance with the manufacturer’s installation instructions, they do not adversely affect the operation of the specified equipment.

Installation instructions are provided with each assembly and include information identifying the equipment into which the assembly may be installed. A generic list of equipment, when the specific parameters of the installation are understood by the installer, may be provided. The installation instructions provide these detailed parameters and indicate the suitable type of construction. All parts and materials necessary to accomplish the installation are included with the retrofit assembly.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1995, “Heating and Cooling Equipment.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark appears on the largest part of the retrofit assembly that can be readily assembled by an installer on site. Each major part of the assembly is identified by appropriate markings.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

RETROFIT ASSEMBLY FOR INSTALLATION IN EQUIPMENT IDENTIFIED IN THE MANUFACTURER’S INSTALLATION INSTRUCTIONS

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RETROFIT ASSEMBLY FOR INSTALLATION IN EQUIPMENT IDENTIFIED IN THE MANUFACTURER’S INSTALLATION INSTRUCTIONS

Control No.

The Classification Mark appears on the largest part of the retrofit assembly that can be readily assembled by an installer on site. Each major part of the assembly is identified by appropriate markings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING AND COOLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (LZHA)

GENERAL

PRODUCT CATEGORIES BY CATEGORY CODE

HEATING AND COOLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (LZHA)

This category covers devices that include a motor-operated fan or blower together with a cooling coil, a heating coil, or both, and may also include an electric heater. The fan or blower is designed to recirculate air or to draw in outside air, or both. The coil may be designed for refrigerant cooling, for refrigerant heating, for chilled water cooling, for hot water heating, for steam heating, or for combinations of these functions.

PRODUCT IDENTITY

The following product identity appears on the product:

Heating and Cooling Equipment for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heating and Cooling Equipment for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING, COOLING AND VENTILATING EQUIPMENT (LZLZ)

GENERAL

This category covers fan-coil units, plenum air-terminal units, room air-terminal units, room fan heater units, and other equipment intended for comfort heating, cooling and ventilation. This equipment is rated 600 V or less.

This equipment is intended for use as part of a complete system and, when installed, may be associated with other equipment and components that are separately Listed. This equipment has not been investigated from the standpoint of operation when combined with other equipment in a complete system assembled in the field, unless indicated in individual Listings for the other equipment.

Where a clearance is required to be maintained between the unit or attached duct work and combustible constructions, the clearance is designated in the individual Listings, and is also marked on the unit. Unless otherwise indicated, the designated clearances (other than "zero") are based on tests of units with uninsulated sheet-metal ducts and plenum attached.

Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit, ducts and plenum.

Unless specified otherwise in the individual Listings and product markings, the unit may be installed on combustible flooring.

Attic-type units are so indicated in the individual Listings. Such units are suitable for installation in an attic or comparable normally unoccupied location as designated by the product marking or instructions provided with the unit.

Separately shipped steam, hot water, or refrigerant coils suitable for field installation in conjunction with heating, cooling and ventilating equipment are identified by (1) the type or model designation of the coil, and (2) the type or model designation of the heating, cooling and ventilating equipment with which it is suitable.

In units rated more than 48 A and employing electric resistance heaters, the loads are subdivided so that each load does not exceed 48 A and is protected at not more than 60 A. The overcurrent protective devices are either included as an integral part of the unit or are furnished as a separate assembly. If the protective devices are furnished as a separate assembly, the unit is marked to specify that it is to be used with that particular separate assembly. For such separate assemblies which are specifically Listed for use with electric space heaters provided as part of this equipment, see **GENERAL PURPOSE CONTROL PANELS FOR ELECTRIC SPACE HEATING**

HEATING, COOLING AND VENTILATING EQUIPMENT (LZLZ)

EQUIPMENT under Heating and Cooling Equipment (LZFE). Other Listed separate assemblies, as referenced on the equipment marking, may also be used.

In units employing two or more motors or a motor and an electric space heater operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor circuit components and wiring are investigated on the basis of a compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Sec. 430.53(C) of ANSI/NFPA 70, "National Electrical Code." Such multimotor and combination load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating which does not exceed the value marked on the data plate.

PRODUCT MARKINGS

The marked protective device rating is the maximum for which the equipment has been investigated and found acceptable. Where the marking specifies fuses or "HACR Type" circuit breakers, the circuit is intended to be protected only by the type of protective device specified.

A unit to be connected to an air duct system is intended for installation in accordance with ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," or ANSI/NFPA 90B, "Installation of Warm Air Heating and Air-Conditioning Systems."

Equipment suitable for outdoor installation is so marked. Equipment not marked as suitable for outdoor installation is intended for indoor use only.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC HEATER ASSEMBLIES CERTIFIED FOR USE ON SPECIFIED EQUIPMENT (LZPU)

USE AND INSTALLATION

This category covers electric heater assemblies intended for factory or field installation on specific certified heating and cooling equipment (see Heating and Cooling Equipment [LZFE]) as identified by a marking on the electric heater assembly. The accessories are intended to be installed in accordance with the installation instructions packaged with the electric heater assembly. All parts and materials necessary to accomplish the installation are included with the electric heater assembly.

The Certification Mark indicates that the heater assembly has been investigated and found suitable for use in combination with the specified certified equipment and that this Mark supplements or supersedes any markings related to add-on heater assemblies marked on the certified equipment.

PRODUCT IDENTITY

The following product identity appears on the product:

Electric Heater Assembly

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling and Ventilating Equipment (LZLZ), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

Alternatively, single-phase appliances rated not more than 250 V, and all other appliances rated not more than 600 V are investigated to ANSI/UL 60335-1, "Safety of Household and Similar Electrical Appliances, Part 1: General Requirements," and ANSI/UL 60335-2-40, "Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

HEATING AND HEATING-COOLING APPLIANCE ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (LZZA)

This category covers accessories for use in the assembly or installation of air conditioning, heating, cooling or refrigeration equipment, and similar applications.

CONTROLS, PRIMARY SAFETY FOR USE IN HAZARDOUS LOCATIONS (LZZG)

GENERAL

This category covers primary safety controls intended for use on gas-, gas-oil- or oil-burning appliances to program and monitor the operation of the burner.

The "safety switch" section of a primary safety control may be a one-piece assembly or it may consist of a control chassis and different add-on sections, such as the base or cabinet and/or plug-in timers and amplifiers.

When a safety control consists of more than one section, the combination of sections specifically Listed is intended to be employed unless otherwise specified on the appliance marking.

PRODUCT MARKINGS

Primary safety controls are marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings.

These products are marked with the following (or equivalent) statement: "Important: For Proper Operation Refer To Manufacturer's Installation Instructions To Determine The Primary Safety Control Sections That Comprise A Listed Primary Safety Control System."

PRODUCT IDENTITY

- One of the following product identities appears on the product:
Primary Safety Control for Use in Hazardous Locations
Section of Primary Safety Control for Use in Hazardous Locations
The words "Hazardous Locations" may be abbreviated "Haz. Loc."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 372, "Automatic Electrical Controls for Household and Similar Use - Part 2: Particular Requirements for Burner Ignition Systems and Components."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Controls, Primary Safety for Use in Hazardous Locations
(LZZG)—Continued

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Primary Safety Control for Use in Hazardous Locations" or "Section of Primary Safety Control for Use in Hazardous Locations." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING AND HEATING-COOLING APPLIANCE ACCESSORIES (LZZX)

This category covers accessories for use in the assembly or installation of air conditioning heating, cooling or refrigeration equipment, and similar applications.

CONTROLS, LIMIT (MBPR)

GENERAL

This category covers controls that are essentially switches operated by a change in liquid level, pressure or temperature. They are intended primarily for use with air conditioning and heating equipment, although not limited to such specific applications. They are intended for household, commercial or industrial use in accordance with ANSI/NFPA 70, "National Electrical Code."

The limit controls may be provided as complete assemblies or they may consist of separate control and sensor sections as indicated in the individual certifications.

Controls for heating equipment — Controls intended for heating equipment are suitable for use with systems equipped with coal stokers, electric heaters, gas burners, or oil burners.

Limit controls and low-water shutoffs — Limit controls and low-water shutoffs should be of the type that opens the circuit when an unsafe condition is approached.

NFPA references — Limit controls are intended for operation of air conditioning, heating air cooling, and ventilating systems as recommended by the National Fire Protection Association for the installation of:

Air conditioning and ventilating systems of other than residence type (ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems")

Residence-type warm air heating and air conditioning systems (ANSI/NFPA 90B, "Installation of Warm Air Heating and Air-Conditioning Systems")

Oil-burning equipment (ANSI/NFPA 31, "Installation of Oil-Burning Equipment")

Gas piping and gas appliances in buildings (ANSI/NFPA 54, "National Fuel Gas Code")

Control testing and specifications — Investigations are conducted to determine the suitability of the circuit scheme and of the intended method of installation and operation of the equipment for use in accordance with the applicable NFPA standards. The suitability and durability of the design and construction, the practicability of installation and use, and the accuracy and reliability of operation of the equipment are determined by appropriate examinations and tests.

When selecting controls, the temperature or pressure range desired and whether automatic or manual reset is required should be specified. The identification of this equipment and its primary function serves as a guide for specifying or ordering. The manufacturer's catalog should be consulted for detailed specifications.

Groups — Limit controls are grouped according to their primary functions as follows:

- **Group A** — Controls operated by a change in pressure intended primarily to limit the pressure in steam heating systems.
- **Group B** — Controls operated by a change in temperature intended primarily to limit the temperature in hot water heating systems and water heaters.

HEATING AND HEATING-COOLING APPLIANCE ACCESSORIES
(LZZX)

Controls, Limit (MBPR)—Continued

• **Group C** — Controls operated by a change in temperature intended primarily to limit the temperature in supply ducts of air conditioning and warm-air heating systems. May also be used to regulate air temperature in ovens and similar applications.

• **Group D** — Controls operated by a change in temperature intended to regulate the operation of air circulating fans in air conditioning and warm-air heating systems.

• **Group E** — Controls operated by a change in temperature for installation in the return air duct of air conditioning and ventilating systems to automatically shut off the fans when the temperature of the air in the system becomes excessive.

• **Group F** — Controls operated by a change in temperature for installation in the smoke pipe of stoker-fired heating plants to prevent feeding of green coal when the fire is out.

• **Group G** — Controls operated by a change in liquid level for boilers to prevent operation of the heating appliance in the event of low water in the boiler.

• **Group H** — Controls operated by a change in liquid level to regulate the delivery of feed water to boilers.

If a single control combines the functions of two groups its designation is a combination of the two groups. For example, a combination warm-air limit control and fan switch of the automatic reset type is classified under "Group C, D."

Manual reset controls — An "M1" or "M2" marking as a suffix to the group designation indicates the following manual reset functions are provided:

• **M1** — Controls that automatically reset to the "closed" position after normal operating conditions have been restored if the reset means is held in the "reset" position.

• **M2** — Controls that do not automatically reset to the "closed" position if the reset means is held in the "reset" position.

Controls investigated to the UL 60730 Series of Standards — Limit controls are defined by particular actions as follows:

• **Type 2.K** — In the event of a break in the sensing element, or in any other part between the sensing element and the switch head, the declared disconnection or interruption is provided before the sum of the declared operating value and drift is exceeded.

• **Type 2.N** — For sensing actions, no increase in the operating value as a result of any leakage from the sensing element, or from parts connecting the sensing element to the switch head.

• **Type 2.H** — Controls that automatically reset to the "closed" position after normal operating conditions have been restored if the reset means is held in the "reset" position.

• **Type 2.J** — Controls that do not automatically reset to the "closed" position if the reset means is held in the "reset" position.

PRODUCT MARKINGS

Limit controls are marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Limit Control
Section of Limit Control

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Controls for refrigeration and air conditioning (except remote, wall-mounted room thermostats) are covered under Controllers, Refrigeration (SDFY).

Electrical temperature controls for heating equipment, motor operators, and wall-mounted room thermostats are covered under Temperature-indicating and Regulating Equipment (XAPX).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 353, "Limit Controls," or ANSI/UL 60730-1, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," in conjunction with ANSI/UL 60730-2-6, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls Including Mechanical Requirements," and/or ANSI/UL 60730-2-9, "Automatic Electrical Controls for Household and Similar Use — Part 2-9: Particular Requirements for Temperature Sensing Controls."

Controls, Limit (MBPR)—Continued

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Limit Control" or "Section of Limit Control," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAVY-DUTY FLEXIBLE POWER
CABLE (MNVD)

GENERAL

This category covers single-conductor, insulated, heavy-duty flexible power cable rated 90°C dry and 75 or 90°C wet, 600 or 2000 V, intended for use as flexible power and control cable in temporary or permanent installations.

PRODUCT MARKINGS

The voltage and temperature ratings are printed on the surface of the insulation.

The letters "DLO" (diesel locomotive) may also be printed on the surface of the insulation.

PRODUCT IDENTITY

One of the following product identities appears on the cable and the tag, coil, reel or smallest unit container in which the product is packaged:

HDFPC

Heavy-duty Flexible Power Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 2806, "Outline of Investigation for Heavy Duty Flexible Power Cable."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOISTS (MSXT)

USE AND INSTALLATION

This category covers power-operated hoists of the overhead type, intended for material-lifting service using either chain or wire rope. Power hoists may include electric or pneumatic types of operation. They are intended to be suspended from a fixed member and may include trolleys for mobility.

All hoists are of the self-locking or braking type so that if the actuating force is removed, the load is retained in place. Load capacities are marked on the assemblies.

This category does not cover:

- Manual or power-operated portable hoists intended for use with scaffolds suspended by wire ropes
- Hoists for transporting people
- Manually operated chain hoists

The fixed member or trolley that suspends the hoist

PRODUCT IDENTITY

One of the following product identities appears on the product:

Electric Hoist

Hoist

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1340, "Hoists."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Hoist" or "Hoist."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOISTWAY CABLE (MSZR)

GENERAL

This category covers hoistway cable, which is a single and multiple conductor cable for use in raceways in accordance with Article 620 of ANSI/NFPA 70, "National Electrical Code." Insulated conductors are 20 to 14 AWG inclusive. Multiple-conductor cable consists of insulated conductors cabled together with a suitable binder or sheath. The cable is rated 300 V or 600 V. The temperature rating, if so marked, is 90°C, otherwise it is 60°C. All cable complies with a vertical flame test.

PRODUCT MARKINGS

Hoistway cable is identified by the words "Hoistway Cable" printed on each insulated conductor and on the sheath, if provided.

PRODUCT IDENTITY

The following product identity appears on the product:

Hoistway Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 62, "Flexible Cord and Fixture Wire."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hoistway Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOSPITAL SIGNALING AND NURSE
CALL ACCESSORY EQUIPMENT
(NBQW)

USE AND INSTALLATION

**HOSPITAL SIGNALING AND NURSE CALL ACCESSORY
EQUIPMENT (NBQW)**

This category covers equipment intended to be used separately or in combination to supplement a hospital nurse call signaling system. Its application is defined by the installation diagram covering the combination of the unit(s) with other units either employed for general hospital signaling use or used to form part of a hospital nurse call signaling system.

The equipment is intended to be installed in accordance with ANSI/NFPA 99, "Health Care Facilities."

Authorities Having Jurisdiction should be consulted before installation.

These units are not intended to be installed in areas where flammable anesthetics are likely to be present. Where equipment has been found suitable for use in oxygen-enriched atmospheres, it is so indicated in the individual certifications and marked on the device.

PRODUCT IDENTITY

One or more of the following product identities appears on the product:

Hospital Signaling and Nurse Call and Security Equipment (for products where the word "SECURITY" is included in the Certification Mark)

Hospital Signaling and Nurse Call and Security Equipment Subassembly (for products where the word "SECURITY" is included in the Certification Mark)

Hospital Signaling and Nurse Call Equipment

Hospital Signaling and Nurse Call Equipment Subassembly

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product identity may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., Hospital Signaling and Nurse Call and Telephone Equipment).

The product identities may be abbreviated as follows:

Type EM (for Enclosed Energy Management Equipment)

Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)

Type F (for Fire Alarm Equipment)

Type F Subassembly (for Fire Alarm Equipment Subassembly)

Type G (for General Signaling Equipment)

Type G Subassembly (for General Signaling Equipment Subassembly)

Type HN (for Hospital Signaling and Nurse Call Equipment)

Type HN Subassembly (for Hospital Signaling and Nurse Call Equipment Subassembly)

Type IT (for Information Technology Equipment)

Type IT Subassembly (for Information Technology Equipment Subassembly)

Type S (for Security Equipment)

Type S Subassembly (for Security Equipment Subassembly)

Type T (for Telephone Equipment)

Type T Subassembly (for Telephone Equipment Subassembly)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1069, "Hospital Signaling and Nurse Call Equipment."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

For products additionally investigated with respect to security applications, the word "SECURITY" is included in the Certification Mark.

Alternate UL Mark
UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Hospital Signaling and Nurse Call Equipment" or "Hospital Signaling and Nurse Call Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Hospital Signaling and Nurse Call and Security Equipment" or "Hospital Signaling and Nurse Call and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Hospital Signaling and Nurse Call and Telephone Equipment").

**HOSPITAL SIGNALING AND NURSE CALL ACCESSORY
EQUIPMENT (NBQW)**

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment

F – Fire Alarm Equipment

HN – Hospital Signaling and Nurse Call Equipment

G – General Signaling Equipment

EM – Enclosed Energy Management Equipment

IT – Information Technology Equipment

T – Telephone Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HOSPITAL SIGNALING AND NURSE
CALL EQUIPMENT (NBRZ)**
USE

This category covers units employed for general hospital signaling use, or to form part of a hospital nurse call signaling system.

Where system units are identified as "supplementary," they are usually intended for connection to other manufacturer's noncertified equipment. These certified supplementary units have been investigated for their ability to provide isolation between the other noncertified equipment and the other certified system units.

Where system interconnection wiring is supervised for open, ground, and short faults, the supervised conductors/circuits are identified in the individual certifications.

Equipment suitable for use in shower stalls is identified in the individual certifications as "Shower Station."

Equipment suitable for use in oxygen-enriched atmospheres or by patients undergoing oxygen therapy is identified as such in the individual certifications. All other equipment should not be used in oxygen-enriched atmospheres or by patients undergoing oxygen therapy.

INSTALLATION

This equipment is intended to be installed in exact accordance with the instructions in the manufacturer's installation manual included with the equipment, and the requirements of ANSI/NFPA 70, "National Electrical Code," and ANSI/NFPA 99, "Health Care Facilities."

Authorities Having Jurisdiction should be consulted before installation.

To maintain leakage-current levels required by the applicable codes, it is intended that the interconnected wiring of the installed system be segregated (separate conduit) from that of systems which are not certified or certified to other categories not conforming to the leakage-current requirements of ANSI/NFPA 99.

INSTALLATION INSTRUCTIONS/MARKINGS

The individual system units covered under this category are separately certified. These units are tested as a typical system while wired in accordance with the manufacturer's installation instructions and wiring diagram. The individual certifications cover not only the system units but also the installation instructions and wiring diagrams that specify proper interconnection.

Modifications to the system in the field are limited to that described in the installation instructions for that system.

Only equipment certified under a specific system name should be considered as having been tested together and found to be compatible per the installation instructions and wiring diagram. Reference is made in the marking of the control unit to the wiring diagram showing complete information except when the installation wiring diagram is secured to the control unit.

These units are not intended to be installed in areas where flammable anesthetics are likely to be present. Where equipment has been found suitable for use in oxygen-enriched atmospheres it is so indicated in the individual certifications and marked on the device.

Other equipment connected to any system unit covered under this product category is not considered to be part of the system configuration unless the equipment in question is identified by the Listee name and model number in the installation instructions and covered under this category or Hospital Signaling and Nurse Call Accessory Equipment (NBQW).

OPERATIONS

System units identified as "fundamental" perform an essential/required operation whose primary function is to provide notification and/or reset/cancellation of a staff-initiated or patient-initiated call signal to alert the staff. The operations include all of the following:

- Call announcement at a nurse's station (audible and visual),
- Call announcement at the dome light,
- Call-placed indicator on the patient station (visual),
- Zone announcement (audible and visual), and

HOSPITAL SIGNALING AND NURSE CALL EQUIPMENT (NBRZ)

PRODUCT CATEGORIES BY CATEGORY CODE

(e) Call reset/cancellation.

Devices that perform fundamental operations are not investigated as being capable of performing supplementary operations.

A supplementary device is a device that is electrically isolated and not investigated as a fundamental device. A supplementary operation is an operation that is adjunct to the fundamental operation so that the failure of such will have no effect on the fundamental operation of the nurse call system.

Various system units may additionally announce fire alarm signals. These signals are supplementary only and these system units have not been investigated as fire-protective signaling system units.

PRODUCT IDENTITY

One or more of the following product identities appears on the product: Hospital Signaling and Nurse Call and Security Equipment (for products where the word "SECURITY" is included in the Certification Mark)

Hospital Signaling and Nurse Call and Security Equipment Subassembly (for products where the word "SECURITY" is included in the Certification Mark)

Hospital Signaling and Nurse Call Equipment

Hospital Signaling and Nurse Call Equipment Subassembly

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories.

When applicable, the product identity may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., Hospital Signaling and Nurse Call and Telephone Equipment).

The product identities may be abbreviated as follows:

Type EM (for Enclosed Energy Management Equipment)

Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)

Type F (for Fire Alarm Equipment)

Type F Subassembly (for Fire Alarm Equipment Subassembly)

Type G (for General Signaling Equipment)

Type G Subassembly (for General Signaling Equipment Subassembly)

Type HN (for Hospital Signaling and Nurse Call Equipment)

Type HN Subassembly (for Hospital Signaling and Nurse Call Equipment Subassembly)

Type IT (for Information Technology Equipment)

Type IT Subassembly (for Information Technology Equipment Subassembly)

Type S (for Security Equipment)

Type S Subassembly (for Security Equipment Subassembly)

Type T (for Telephone Equipment)

Type T Subassembly (for Telephone Equipment Subassembly)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1069, "Hospital Signaling and Nurse Call Equipment."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

For products additionally investigated with respect to security applications, the word "SECURITY" is included in the Certification Mark.

Alternate UL Mark

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Hospital Signaling and Nurse Call Equipment" or "Hospital Signaling and Nurse Call Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Hospital Signaling and Nurse Call and Security Equipment" or "Hospital Signaling and Nurse Call and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Hospital Signaling and Nurse Call and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment

F – Fire Alarm Equipment

HN – Hospital Signaling and Nurse Call Equipment

G – General Signaling Equipment

EM – Enclosed Energy Management Equipment

IT – Information Technology Equipment

T – Telephone Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HYDROGEN GENERATORS (NCBD)

HYDROGEN GENERATORS, WATER-REACTION TYPE (NCBR)

USE AND INSTALLATION

This category covers products that generate hydrogen for use as a fuel by chemical reactions with water and other chemical substances (e.g., sodium borohydride and sodium hydride). These products are intended for use in accordance with ANSI/NFPA 70, "National Electrical Code." These products have an input rating of 600 V or less, and are intended for either portable or permanent connection to the source of supply and for installation in accordance with the manufacturer's installation instructions. These products are intended to be installed in accordance with ANSI/NFPA 55, "Storage, Use, and Handling of Compressed Gases and Cryogenic Fluids in Portable and Stationary Containers, Cylinders, and Tanks," ANSI/NFPA 52, "Vehicular Fuel Systems Code," or the "International Fuel Gas Code," as applicable.

PRODUCT MARKINGS

These products are marked to indicate the manufacturer's name; model number; electrical input rating; IP rating; hydrogen output purity, temperature, capacity and pressure; and input fuel. Units are marked for residential use or nonresidential use as intended:

- **Residential** — Use in occupancies in which sleeping accommodations are provided for normal residential purposes and include all buildings designed to provide sleeping accommodations.
- **Nonresidential** — Use in locations other than residential, such as mercantile business, industrial and storage.

PRODUCT IDENTITY

The following product identity appears on the product:

Hydrogen Generator, Water-reaction Type

RELATED PRODUCTS

This category does not cover fuel cell systems or reversible fuel cell systems; such products are covered under Stationary Fuel Cell Systems (IRGZ), Fuel Cell Power Systems for Use in Industrial Trucks (IRGQ), Hand-held or Hand-transportable Fuel Cell Power Units and Disposable Fuel Cartridges (IRGU) or Fuel Cell Modules (IRGR2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2264B, "Outline of Investigation for Hydrogen Generators Using Water Reaction."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hydrogen Generator, Water-reaction Type."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer.

Hydrogen Generators, Water-reaction Type (NCBR)—Continued

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER-DRIVEN VENTILATORS FOR USE IN HAZARDOUS LOCATIONS (NCGV)

GENERAL

This category covers water-turbine-powered, positive-pressure ventilators intended for use in hazardous locations.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Positive-pressure Ventilation Fan for Use in Hazardous Locations
Water-driven Ventilator for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Positive Pressure Ventilation Fan for Use in Hazardous Locations" or "Water Driven Ventilator for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HYDROMASSAGE BATHTUBS (NCHX)

USE AND INSTALLATION

This category covers indoor hydromassage bathtubs (also known as whirlpool baths) rated 250 V or less, for residential and commercial use, for permanent connection to the building plumbing, and intended for installation and use in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code." They are intended for either permanent connection to the electrical supply or are provided from the factory with a maximum 3 ft. type SJ or equivalent service cord terminating in a grounding type attachment plug. A hydromassage bathtub may have provision for a maximum of two supply sources.

A hydromassage bathtub consists of a drainable tub, a recirculating pump and optional equipment such as lights, a heater, a control and an air blower. A bathtub may also be provided with an air-blower and no recirculating pump or with an integral shower unit.

This category also covers heaters intended to be installed after a hydromassage bathtub leaves the factory. These field-installed heaters are certified as hydromassage bathtub accessories. They are provided with markings on the heater and on the heater packaging to indicate the hydromassage bathtub models with which they are suitable.

Hydromassage bathtubs and hydromassage bathtub accessory heaters are intended to be protected by a ground-fault circuit interrupter.

Double Insulation — Hydromassage bathtubs may utilize double insulated pumps. These pumps are marked "Double Insulated" or "Double Insulation." Double insulated pumps intended for permanent connection to the supply may or may not have provision to terminate an equipment grounding conductor. Cord-connected double insulated pumps may be provided with a power supply cord terminating in a nongrounding type attachment plug. Double insulated pumps are not provided with a pressure wire connector for equipotential bonding.

The physiological effect of using this equipment has not been determined.

INSTRUCTIONS/MARKINGS

Factory Configuration Information — Each hydromassage bathtub is provided with a marking on the wiring diagram, in the installation instructions or on a separate configuration sheet, to identify the factory-installed components of the unit. These components include pumps, controls, heaters, luminaires, and supply cords. This configuration marking and the installation instructions are intended to be available during installation and inspection.

Field-installed Options — Field-installed options that have been investigated and found to be suitable for addition to the unit are specified in the installation instructions. Hydromassage bathtubs intended for accessory heaters to be installed in the field are factory configured with fittings for this purpose. These bathtubs are marked "Suitable for Field-Installed Heater Accessory" and "Use only Accessory Heaters Marked for Use with This Bathtub."

PRODUCT IDENTITY

One of the following product identities appears on the product:

Hydromassage Bathtub
Hydromassage Bathtub Accessory

RELATED PRODUCTS

Portable hydromassage equipment is covered under Personal Hygiene and Health Care Appliances (QGRZ). This category does not cover hydrotherapy tubs used in health care facilities. For prefabricated steam baths and showers, see Prefabricated Assemblies, Sections and Units (QOXX). For sauna and steam bath heating equipment, see Heaters, Sauna and Steam Bath (KPJV). Self-contained spas and hot tubs are covered under Self-contained Spas (WCZW).

For unjetted plastic bathtubs, shower stalls, and the like tested in accordance with the applicable ANSI Z124 series standards, see Plastic Plumbing Fixtures (QNNP).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1795, "Hydromassage Bathtubs."

The suction fittings used in these hydromassage bathtubs have been investigated with respect to body and hair entrapment to ASME/ANSI A112.19.7 (2012), "Hydromassage Bathtub Systems."

Some products covered under this category have also been investigated to ASME/ANSI A112.19.7 (2012), the water retention test requirement from ASME/ANSI A112.19.7 (2012), and/or ASME/ANSI A112.19.15 (2012), "Bathtubs/Whirlpool Bathtubs with Pressure Sealed Doors." These products are intended for installation and use in accordance with the applicable model plumbing code.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

For those products which are also certified by UL to ASME/ANSI A112.19.7 (2012) and/or ASME/ANSI A112.19.15 (2012), the following information is included on the product:

ALSO CERTIFIED TO ASME/ANSI A112.19.7 (2012)

and/or

ALSO CERTIFIED TO WATER RETENTION TEST REQUIREMENT FROM ASME/ANSI A112.19.7 (2012)

and/or

ALSO CERTIFIED TO ASME/ANSI A112.19.15 (2012)

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hydromassage Bathtub" or "Hydromassage Bathtub Accessory."

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with standards or parts detailed below from the American National Standards Institute (ANSI). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: "ALSO CLASSIFIED IN ACCORDANCE WITH *," where "*" is one of the texts detailed below:

1. ASME/ANSI A112.19.7 (2012)
2. WATER RETENTION TEST REQUIREMENT FROM ASME/ANSI A112.19.7 (2012)
3. ASME/ANSI A112.19.15 (2012)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL EQUIPMENT (NIMX)

This category covers the following devices:

- Electro-sensitive protective equipment
- Emergency stop devices
- Industrial control panels
- Industrial control switches
- Motor control centers
- Motor controllers over 1500 V
- Motor controller accessories over 1500 V
- Motor controllers
- Power circuit and motor-mounted apparatus
- Power conversion equipment (medium voltage)
- Programmable controllers
- Programmable safety controllers
- Protective relays
- Proximity switches

Enclosure Type ratings — Enclosed industrial control equipment is identified with an Enclosure Type designation and is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). Only Enclosure Type designations associated with the UL Listing Mark have been certified by UL. Open-type components investigated for mounting through the wall of specific enclosure types are marked "Suitable for use on a flat surface of a Type ___ enclosure," or the equivalent, and are provided with instructions and mounting hardware.

Open-type equipment — Unless otherwise specified in the instructions or markings on the product, open-type industrial control equipment is intended for installation within enclosures supplied in the field.

Field-wiring connections — Industrial control equipment is for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Accessories — Industrial control equipment for which accessory kits are available for the field or distributor modification of the basic product or which may be assembled in many forms from separate components are marked to indicate the suitable accessories or separate components which may be used.

Coil ratings — Unless otherwise marked, the sealed volt-ampere rating of the operating coil circuit of a magnetically-operated industrial control device is as tabulated below. For a magnetically-operated industrial control device with an ac coil, the device is investigated for operation over a range of +10% and -15% of the rated control circuit voltage. For a magnetically-operated industrial control device with a dc coil, the device is investigated for operation over a range of +10% and -20% of the maximum rated control circuit voltage.

Marked Contact Rating of Device, Amperes	Maximum Coil Volt-Amperes
30 A or less	30 VA
50 A or less	75 VA
150 A or less	100 VA
300 A or less	125 VA

Voltage ratings — Industrial control equipment is marked with the maximum voltage rating for the intended loads. When the marked voltage rating is included in one of the voltage ranges tabulated below, the equipment has been investigated for use at the corresponding maximum voltage of the range:

Marked Voltage Rating of Equipment	Maximum Use Voltage
110 - 120	120
220 - 240	240
254 - 277	277
380 - 415	415
440 - 480	480
550 - 600	600

Frequency — Unless otherwise marked on the equipment, industrial control equipment is intended for use on alternating-current supply with a rated frequency of 50/60 Hz.

Load type — Unless otherwise marked on the equipment, an ampere rating assigned to industrial control equipment is considered to be a general-purpose rating for use with a load that is continuous or with an inrush current that does not exceed the ampere rating of the device. For other specific load types, the rating is followed by one of the following terms:

Marked Rating on Device	Intended Load Type
Amperes	General use
Amperes, resistive (or res.)	Resistive
Amperes, resistance	Heater load
Amperes, ballast	Electric discharge lamp magnetic ballast load
Amperes, electronic ballast	Fluorescent lamp electronic ballast load
Amperes or watts, tungsten	Incandescent lamp load
Code designation, volt-amperes	Coil, standard or heavy duty (pilot duty)
Amperes, kVar	Capacitor switching load, full load amperes
Hp	Motor load
FLA/LRA	Hermetic refrigeration compressor motor

Number of poles — Unless otherwise marked, an industrial control device rated for a single-phase load has been investigated for controlling a single-phase load using one pole of the controller. A controller rated for a three-phase load has been investigated for controlling the three-phase load using two poles of the controller. For an industrial control device marked "break all lines" or the equivalent, such as by means of a wiring diagram, a switched pole is intended to be connected to each conductor supplying the load.

Number of phases — A marked rating for which the number of phases is not specified is considered to be for a single-phase circuit.

Ambient temperature rating — Unless otherwise specified on the product or on instructions provided with the product, enclosed industrial control equipment and open-type equipment, when installed in an enclosure, is intended for use in an ambient temperature of 0°C - 40°C (32°F - 104°F).

Surrounding air-temperature rating — Some open-type equipment is marked with a surrounding air-temperature rating. Such equipment is intended to be installed within an enclosure having sufficient volume and ventilation or is provided with additional cooling means such that while the equipment is in operation, the air immediately surrounding the equipment within the ultimate enclosure does not exceed the marked surrounding air-temperature rating.

Functional Safety and Electromagnetic Compatibility (EMC) — Unless specifically indicated in the Guide Information for each product category, the equipment listed above has not been subjected to investigation with respect to its use in applications involving functional safety or EMC.

Service equipment markings — Some industrial control equipment is suitable for use as service equipment and may be so marked. Such marking is part of the Listing Mark or is an integral part of other required markings.

Some industrial control equipment incorporates neutrals that are insulated from the frame or enclosure. Such units are marked "Suitable for Use as Service Equipment." Some industrial control equipment incorporates neutrals factory bonded to the frame or enclosure. Such units are marked "Suitable Only for Use as Service Equipment."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRO-SENSITIVE PROTECTIVE EQUIPMENT (NIOZ)

GENERAL

This category covers electro-sensitive protective equipment (ESPE) for the safeguarding of machinery. ESPE is applied to machinery that presents a risk of personal injury, and is intended to provide protection by causing the machine to revert to a safe condition before a person can be placed in a hazardous situation.

In addition to fire and electric shock hazards, these devices have been investigated for their safety-related performance features. ESPE is designated as conforming to the requirements for Type 2, 3 or 4 ESPE as shown in the individual certifications and as defined in ANSI/UL 61496-1, "Electro-Sensitive Protective Equipment, Part 1: General Requirements and Tests."

The adequacy of the dimensions or configuration of the sensing zone and its disposition in relation to hazardous parts for any particular application has not been investigated as part of this category, nor what constitutes a hazardous state of any machine. The investigation of ESPE is restricted to the functioning of the ESPE, the means by which it monitors the condition of the machine, and how it interfaces with the machine controls.

The products covered under this category may be relevant to applications other than those for the protection of persons, for example for the protection of machinery or products from mechanical damage. In those applications additional requirements may be necessary, for example when the materials that have to be recognized by the sensing function have different properties than those of persons.

Electro-sensitive Protective Equipment (NIOZ)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Active Opto-electronic Protective Devices (NIPF)

GENERAL

This category covers electro-sensitive protective equipment (ESPE) for the safeguarding of machinery, employing active opto-electronic protective devices (AOPD) for the sensing function.

The sensing function is performed by opto-electronic emitting and receiving elements detecting the interruption of optical radiations generated, within the device, by an opaque object present in the specified detection zone.

This category does not cover AOPDs employing radiation at wavelengths outside the range 400 nm to 1,500 nm.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Active Opto-electronic Protective Device
- AOPD
- Electro-sensitive Protective Equipment
- ESPE

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Electro-sensitive protective equipment (ESPE) for the safeguarding of machinery, employing active opto-electronic protective devices responsive to diffuse reflection (AOPDDR) for the sensing function is covered under Active Opto-electronic Protective Devices Responsive to Diffuse Reflection (NIPM).

Electro-sensitive protective equipment (ESPE) employing vision-based protective devices (VBPDs) for the safeguarding of machinery is covered under Active Opto-electronic Protective Devices Employing Vision-based Protective Devices (NIPJ).

ADDITIONAL INFORMATION

For additional information, see Electro-sensitive Protective Equipment (NIOZ), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," ANSI/UL 61496-1, "Electro-Sensitive Protective Equipment, Part 1: General Requirements and Tests," and ANSI/UL 61496-2, "Electro-Sensitive Protective Equipment, Part 2: Particular Requirements for Equipment Using Active Opto-Electronic Protective Devices (AOPDs)."

The safety-related software has additionally been investigated to ANSI/UL 1998, "Software in Programmable Components," or IEC 61508-3, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 3: Software Requirements," as indicated in the individual certifications.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electro-sensitive Protective Equipment" (or "ESPE") or "Active Opto-electronic Protective Device" (or "AOPD"), or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Active Opto-electronic Protective Devices Employing Vision-based Protective Devices

(NIPJ)

GENERAL

Active Opto-electronic Protective Devices Employing Vision-based Protective Devices (NIPJ)—Continued

This category covers electro-sensitive protective equipment (ESPE), employing vision-based protective devices (VBPDs) for the safeguarding of machinery.

The sensing function is performed by single-image sensing devices viewing one two-dimensional image against a passive pattern as the background and where the detection principle is blocking the view of the pattern.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Active Opto-electronic Protective Device Employing Vision-based Protection Devices
- AOPDVBP

EMERGENCY STOP DEVICES (NISD)

GENERAL

This category covers emergency stop devices, including emergency stop units and emergency stop buttons, intended to be installed in a machine control system to perform a Category 0 or Category 1 stop function as defined in ANSI/NFPA 79, "Electrical Standard for Industrial Machinery." The emergency stop actuator provided in these devices is a self-latching type. These devices have been investigated for their functionality in addition to fire and electric shock safety.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Emergency Stop Button
 - Emergency Stop Device
 - Emergency Stop Unit

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

- The basic standards used to investigate products in this category are:
 - ANSI/UL 508, "Industrial Control Equipment"
 - UL 991, "Tests for Safety-Related Controls Employing Solid-State Devices"
 - ANSI/NFPA 79, "Electrical Standard for Industrial Machinery"

EQUIPMENT USED FOR SYSTEM ISOLATION AND RATED AS A SINGLE UNIT (NISI)

USE AND INSTALLATION

This category covers equipment used for system isolation and rated as a single unit, which is factory-wired assemblies of isolating equipment incorporating electromechanical contactors remotely controlled and monitored to provide remote isolation status indication with a defined integrity level. This equipment is not intended to provide starting and stopping functions for motors and other related loads. This equipment is intended for use as an additional isolating means on the load side of the required supply-disconnecting device and over current protection for equipment and machinery with multiple entry points. This equipment may be employed to provide electrical isolation in order to prevent energy to motive forces (e.g., mechanical, electrical, pneumatic) to specific parts of machinery while maintaining functionality to other circuits within the same machinery. Equipment certified under this category is comprised of the enclosure, all components located within the enclosure, and all components mounted to the walls of the enclosure. It may also include remote mounted enclosed control and monitoring operating lockout stations which provide for remote control and status indication of the isolating electromechanical contactors within the main assembly and status indication (open/closed) of the isolating contactors.

This equipment is intended for installation in accordance with ANSI/NFPA 70 (2011), "National Electrical Code" (NEC), and ANSI/NFPA 79 (2012), "Electrical Standard for Industrial Machinery." Reference to system isolation equipment is found in Article 430.109(A)(7) of the NEC; in Clause 5.5.4(3), "Devices for Disconnecting (Isolating) Electrical Equipment," of ANSI/NFPA 79; and in Clause 5.3.2(d) of IEC 60204-1 (2009), "Safety of Machinery – Electrical Equipment of Machines – Part 1: General Requirements."

RATINGS

Equipment used for system isolation and rated as a single unit is rated 1000 V ac or less and 1500 V dc or less. The power output from the main control panel is rated for the maximum load rating of connected equipment motor current (I_{em}). The supply input to the main assembly is rated in full load amperes, rating of largest motor load, voltage, number of phases, and frequency. The supply input is additionally provided with a short-circuit-current rating indicating the maximum rms symmetrical amperes and voltage available at the input terminals of the main assembly panel and rated impulse withstand voltage for isolation.

ENVIRONMENTAL RATINGS

The main assembly panel enclosures and remote stations are marked with the enclosure type ratings for which they were investigated.

PRODUCT MARKINGS

Equipment used for system isolation and rated as a single unit is marked with the electrical ratings for each source of supply to the panel. The wiring diagram provided with the main assembly panel is marked with the electrical ratings of the intended load equipment, such as motors, heaters, lighting, or appliance loads. Equipment used for system isolation and rated as a single unit is provided with a complete schematic diagram as built by the manufacturer. When additional installation instructions are provided on a separate drawing, a reference to the drawing containing the information is marked on the nameplate of the industrial control panel.

PRODUCT CATEGORIES BY CATEGORY CODE

Equipment Used for System Isolation and Rated as a Single Unit (NISI)—Continued

The nameplate is marked with the short-circuit-current rating for each supply as follows: "Short-circuit current: ___ kA rms symmetrical, ___ V maximum," or the equivalent.

When the required branch-circuit protection is not provided, markings are provided in the installation manual specifying the type and size of branch-circuit-protective devices that must be provided in the end use.

Installation instructions indicate that field-installed interconnection wiring between remote mounted lockout stations and the main control assembly equipment is isolated and segregated from all other wiring and prevented from external contact and the maximum length of the cable.

PRODUCT IDENTITY

The following product identity appears on the product:

Equipment Used for System Isolation and Rated as a Single Unit

RELATED PRODUCTS

See Industrial Control Panels (NITW) and Factory Automation Equipment (GPNY).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 6420, "Equipment Used for System Isolation and Rated as a Single Unit."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL PANELS (NITW)

GENERAL

This category covers industrial control panels, which are factory-wired assemblies of industrial control equipment, such as motor controllers, switches, relays and auxiliary devices. The panels may include disconnect means and motor branch-circuit protective devices. An industrial control panel does not include the controlled loads, including motors, luminaires, heaters, or utilization equipment.

An enclosed industrial control panel is comprised of the enclosure, all components located within the enclosure, and all components mounted to the walls of the enclosure.

An open industrial control panel is comprised of a mounting sub-panel and all components mounted to the sub-panel, and is intended for installation into an enclosure in the field.

This category also covers industrial control panel enclosures. The enclosures may contain ventilation openings, observation windows, conduit fittings, environmental control devices, or maintenance luminaires. Industrial control panel enclosures are intended to house open-type industrial control panels or individual items of industrial control equipment installed in the field.

Industrial control panels are intended for installation in accordance with Article 409 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Unless otherwise marked, industrial control panels covered under this category are intended for general-use industrial applications for control of heaters, lighting, motors or pump loads, or a combination of these loads, and are intended for installation in accordance with Chapter 4 of the NEC.

Industrial control panels marked "Industrial Control Panel for Industrial Machinery" on the unit nameplate have been investigated to determine that they meet the requirements of ANSI/NFPA 79, "Electrical Standard for Industrial Machinery," in addition to Article 670 of the NEC. Industrial control panels designated for control of industrial machinery may not be suitable for use with other equipment.

Industrial control panels marked "Flame Control Panel" on the unit nameplate contain controls for fossil fuel-burning equipment, such as incinerators, kilns, and drying ovens, intended for industrial applications. These control panels may additionally contain controls for other loads.

Industrial control panels marked "Crane Control Panel" or "Hoist Control Panel" on the unit nameplate contain controls for overhead cranes and hoists for industrial applications. These panels are intended for installation in accordance with Article 610 of the NEC and may not be suitable for use with equipment other than cranes and hoists.

Industrial control panels marked "Industrial Control Panel for Marine Use" on the unit nameplate are intended for use aboard vessels over 65 feet

Industrial Control Panels (NITW)—Continued

(19.9 m) in length. These panels have been investigated to determine that they meet the requirements of USCG Electrical Engineering Regulations Subchapter J (46CFR, Part 110).

Industrial control panels marked "Industrial Control Panel for Refrigeration Equipment" or "Industrial Control Panel for Air Conditioning Equipment" on the unit nameplate contain controls for hermetic refrigerant compressor motors for industrial applications. These control panels are intended for installation in accordance with Article 440 of the NEC. Industrial control panels designated for control of refrigeration equipment may not be suitable for use with equipment other than refrigeration equipment.

Industrial control panels marked for service equipment use may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking, such as on a wiring diagram or on the equipment. Instructions are provided for on-site testing of the ground-fault protection at the time of installation.

Industrial control panels marked "Fountain Control Panel" on the unit nameplate are intended for control of permanently installed fountains or floating fountains. These control panels are intended for installation in accordance with Article 680 or 682 of the NEC.

Industrial control panels marked to indicate suitability of use in load-management applications contain control circuitry that limits output current to a marked maximum load.

Industrial control panels are not intended for installation in motor control center sections or units.

RATINGS

Industrial control panels are rated 600 V or less. Each power circuit output from the control panel is rated in current or power, voltage, and the intended load type, such as a motor. Each supply input to the industrial control panel is rated in full load amperes, rating of largest motor load, voltage, number of phases, and frequency. Each supply input is additionally provided with a short-circuit current rating indicating the maximum rms symmetrical amperes and voltage available at the input terminals of the industrial control panel or, for an industrial control panel not supplied with branch-circuit protection, the maximum rms symmetrical amperes and voltage available on the line side of the overcurrent protection installed in the field.

ENVIRONMENTAL RATINGS

Industrial control panel enclosures are marked with the enclosure type ratings for which they were investigated.

Enclosed industrial control panels are marked with an enclosure type rating. The type rating of the industrial control panel may differ from the rating of the basic enclosure due to the presence of components or assemblies installed through the enclosure walls by the manufacturer.

PRODUCT MARKINGS

Industrial control panels are marked with the electrical ratings for each source of supply to the panel. The panel or wiring diagram provided with the panel is marked with the electrical ratings of the intended load equipment, such as motors, heaters, lighting, or appliance loads. Industrial control panels are provided with a complete schematic diagram of the panel as built by the manufacturer. When the schematic wiring diagram includes components that are not supplied with the industrial control panel, such as remote control devices, motors or similar devices, a notation or similar means is used to identify such components. When additional installation instructions are provided on a separate drawing, a reference to the drawing containing the information is marked on the nameplate of the industrial control panel.

The nameplate of industrial control panels is marked with the short-circuit current rating for each supply as follows: "Short circuit current: ___ kA rms symmetrical, ___ V maximum," or the equivalent.

SPECIAL CONSIDERATIONS

These control panels are investigated for electrical fire and shock hazards only. The investigation of industrial control panels does not include investigation of the adequacy of the control and protective devices to supervise the functioning of the controlled equipment.

Special relationships and investigations may be necessary for the proper operation of certain equipment, as noted below:

1. Control panels investigated for use in access control systems, which provide a means of regulating or controlling entry into an area, are covered under Access Control System Units (ALVY).
2. Industrial control panels investigated with air conditioning and refrigeration equipment are covered under Heating and Cooling Equipment (LZFE) or Specialty Refrigeration Equipment (SROT).
3. Industrial control panels investigated with industrial machinery are covered under Factory Automation Equipment (GPNY).
4. Flame control panels investigated with specific burner assemblies are covered under Commercial/Industrial Gas Burners (KXWT), Gas-Oil Burners (KYKR) or Oil Burners (KYXZ).
5. Fluid-handling systems consisting of industrial control panels, pumps, valves, gauges, and piping mounted to a structural base are covered under Packaged Pumping Systems (QCZJ).

Industrial Control Panels (NITW)—Continued

6. Control panels investigated with equipment intended for use as part of a semiconductor manufacturing process are covered under Analysis and Measurement Equipment (TWLR), Miscellaneous Semiconductor Manufacturing Equipment (TWTZ), Power Supplies, Semiconductor (TWVJ) or Semiconductor Manufacturing Equipment, Limited Production (TWWU).
7. Control panels investigated for use with flammable-liquid dispensing devices are covered under Control, Monitoring and Auxiliary Equipment (EQXX). Liquids with a flash point below 100°F are defined as flammable. Liquids with a flash point of 100°F and above are defined as combustible.
8. Control panels intended for use in motor control center sections or units are covered under Motor Control Centers (NJAV).
9. Control panels intended to energize or de-energize electrical loads to achieve the desired use of electrical power are covered under Management Equipment, Energy (PAZX).

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Enclosed Industrial Control Panel
 Industrial Control Panel Enclosure
 Open Industrial Control Panel

RELATED PRODUCTS

Enclosures for general-use electrical equipment or wiring are covered under Boxes, Junction and Pull (BGUZ) or Cabinets and Cutout Boxes (CYIV).

Control panels intended for elevators, dumbwaiters, escalators, moving walks, inclined lifts and their associated equipment are covered under Elevator Control Panels (FQPB).

Control panels with connection to sensors or initiating devices to detect and activate emergency alarms are covered under Signal System Units (UDTZ).

Equipment for gas or vapor detection and intended for connection to emergency alarm equipment is covered under Gas and Vapor Detectors and Sensors (FTAM).

Control equipment intended to supply automatic illumination, power, or both, to critical areas and equipment essential to safety of human life is covered under Emergency Lighting and Power Equipment (FTBR).

Freestanding motor control center sections, motor control center units and equipment intended for field installation into a motor control center are covered under Motor Control Centers (NJAV).

Control panels intended for installation in hazardous (classified) locations are covered under Control Panels and Assemblies for Use in Hazardous Locations (NNNY).

Control panels provided with intrinsically safe circuits for extension into hazardous (classified) locations are covered under Industrial Control Panels Relating to Hazardous Locations (NRBX).

Cabinets, enclosures and rack/frame systems that include components and assemblies intended to power, protect, heat, cool or otherwise support information technology (IT), telecommunications equipment, or audio/video equipment (A/V) are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems (NWIN).

Equipment intended for the control of fuel cells, photovoltaic systems, or utility interactive systems are covered under AC Modules (QHYZ), Distributed Resource Power Systems (QIJL) or Static Inverters and Converters for Use in Independent Power Systems (QIKH).

Portable control panels containing switches, overcurrent protection, and that are cord connected via attachment plugs and receptacles for use at carnivals, circuses, fairs, exhibition halls, motion picture and television studios, theaters, construction sites and similar locations are covered under Portable Power Distribution Units and Devices (QPSH) or Portable Power Distribution Panels (QPSM).

Assemblies comprised of equipment such as circuit breakers, fuses, switches, and related accessory equipment and intended to distribute power to field installed communications equipment are covered under Power Distribution Centers for Communications Equipment (QPQY).

Control panels intended for industrial application on power-operated machines intended for such uses as pressing, punching, shearing or braking operations, and additionally investigated in accordance with the Occupational Safety and Health Administration Standard Section 1910.217 are covered under Press and Other Power-operated Machine Controls and Systems (QUEQ).

Controllers intended for electric fire pumps are covered under Pump Controllers, Fire (QYZS).

Industrial control panels additionally investigated in accordance with SEMI S2 Standards are covered under Control Panels (TWRP).

Control panels containing electrical control units for use in fire-protective signaling systems are covered under Control Units, Releasing Device (SYZV), Control Units, System (UOJZ) or Smoke Control System Equipment (UUKL).

Industrial Control Panels (NITW)—Continued

Control panels intended for use with equipment for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools are covered under Controls (WAWU).

Freestanding assemblies of circuit breakers and busses for control of electric light and power circuits of equipment for installation into dead-front switchboards are covered under Switchboards, Dead-front (WEVZ).

Enclosed assemblies consisting only of lengths of busbars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors for power circuits are covered under Termination Boxes (XCKT).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 508A, "Industrial Control Panels."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark on enclosed industrial control panels covers both the enclosure and the provided panel. The Certification Mark on industrial control panel enclosures covers only the enclosure; the compatibility of the enclosure and the installed equipment and associated wiring has not been investigated unless a Certification Mark is also present on the enclosed industrial control panel.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Open Industrial Control Panel," "Enclosed Industrial Control Panel" or "Industrial Control Panel Enclosure."

The "Enclosed Industrial Control Panel" Listing Mark covers both the enclosure and the provided panel. Open panels employ the "Open Industrial Control Panel" Listing Mark. The "Industrial Control Panel Enclosure" Listing Mark covers only the enclosure; the compatibility of the enclosure and the installed equipment and associated wiring has not been investigated unless an "Enclosed Industrial Control Panel" Listing Mark is also present.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDIUM-VOLTAGE EQUIPMENT (NJAM)**Motor and Resistive-load Controllers Over 1500 Volts (NJHU)****GENERAL**

This category covers enclosed motor controllers and resistive-load controllers having ac voltage ratings of over 1500 V, up to 15 kV, intended for starting, stopping, regulating, controlling, or protecting electric motors or other electrical loads, including refrigeration equipment.

This equipment has been investigated for use on three-phase circuits having available fault levels not exceeding the MVA or kA rating appearing on the nameplate. The three-phase available symmetrical MVA is equal to the product of the available symmetrical rms short-circuit current, the line-to-line open-circuit voltage, and a phase factor of 1.73×10^6 .

Motor controllers that are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at six times the continuous current rating of the controller at rated voltage.

Some controllers are provided with an integrally mounted surge arrester to meet the required impulse withstand.

These motor controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

These controllers may consist of a single vertical section housing one or more individual controllers, or may consist of several abutting vertical sections intended for interconnection by means of a suitable horizontal bus. These vertical sections are normally freestanding; however, a single controller may be provided in a construction intended for wall mounting.

This category covers both electromechanical and solid-state-type controllers. Solid-state controllers have static switching elements for stopping,

Motor and Resistive-load Controllers Over 1500 Volts (NJHU)—Continued

starting, and controlling the load, and are also provided with an isolating means which, when opened, provides a visible isolation gap.

ARC-RESISTANT CONTROLLERS

Controllers specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be certified as arc-resistant controllers.

Arc-resistant controllers have been investigated for installation in buildings (for indoor applications) that have sufficient overhead space to permit venting without reflecting arc products, as specified in the installation instructions.

Arc-resistant controllers are marked with an Accessibility Type designation of Type 1, 1B, 1C, 1D-SR, 1D-SL, 1D-R, 2, 2B or 2C based upon the construction.

Type 1 designates controllers with arc-resistant construction at the front only.

Type 1B designates controllers with arc-resistant construction at the front, and the low-voltage control or instrument compartment(s).

Type 1C designates controllers with arc-resistant construction at the front, and between compartments within the same section or adjacent sections. In Type 1C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent sections.

Types 1D-SR, 1D-SL and 1D-R designate controllers with arc-resistant construction in the front, and at the right side (SR), left side (SL) or the rear (R), respectively.

Type 2 designates controllers with arc-resistant construction at the front, sides and rear.

Type 2B designates controllers with arc-resistant construction at the front, sides, rear and the low-voltage control or instrument compartment(s).

Type 2C designates controllers with arc-resistant construction at the front, sides and rear, and between compartments within the same section or adjacent sections. In Type 2C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent sections.

PRODUCT IDENTITY

One of the following product identities appears on the product:

High-voltage Industrial Control Equipment
High-voltage Motor Control Equipment Section
Medium-voltage Industrial Control Equipment
Medium-voltage Motor Control Equipment Section
Medium-voltage Resistive-load Controller
Medium-voltage Resistive-load-controller Section

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate electromechanical motor controller products rated 7200 V or less in this category is ANSI/UL 347, "High Voltage Industrial Control Equipment" (4th ed.), and/or ANSI/UL 347, "Medium-Voltage AC Contactors, Controllers, and Control Centers" (5th ed.).

The basic requirements used to investigate controllers rated over 7200 V to 15 kV, and solid-state-type motor controllers rated over 1500 V to 15 kV in this category are contained in UL Subject 347B, "Outline of Investigation for Medium Voltage Motor Controllers, Up to 15 kV."

The basic requirements used to investigate solid-state resistive-load controllers rated over 1500 V to 15 kV, are contained in UL 347C, "Outline of Investigation for Medium Voltage Motor Controllers, Up to 15 kV."

In addition to the basic standards noted above, the standard used to investigate controllers certified as "arc resistant" is IEEE C37.20.7, "IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Each control equipment section includes the designation "___ of ___." The first blank is stamped with the number indicating the position that the section occupies in the series of sections constituting the control equipment. The second blank is stamped with the total number of sections in the control equipment (including sections not bearing the Certification Mark).

Each certified control equipment section consists of one or more high-voltage units. Each certified unit is individually identified as a certified product.

Motor and Resistive-load Controllers Over 1500 Volts (NJHU)—Continued

Controllers investigated as arc resistant are additionally marked with the following information:

ARC-RESISTANT MOTOR CONTROLLER
ALSO CERTIFIED TO IEEE C37.20.7

or
RESISTIVE-LOAD CONTROLLER
ALSO CERTIFIED TO IEEE C37.20.7

Where the Certification Mark includes reference to arc-resistant controllers, the Certification Mark appears on the front of each vertical section eligible for certification. The Certification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or removable units.

Each vertical section of a line-up of abutting vertical sections is provided with a "___ of ___" marking, where the first blank indicates the position (from left to right) of the vertical section bearing the Certification Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the Certification Mark).

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "High Voltage Industrial Control Equipment," "High Voltage Motor Control Equipment Section," "Medium-voltage Industrial Control Equipment," "Medium-voltage Motor Control Equipment Section," "Medium-voltage Resistive-load Controller" or "Medium-voltage Resistive-load-controller Section."

The Listing Mark for control equipment sections also includes the designation "___ of ___." The first blank is stamped with the number indicating the position that the section occupies in the series of sections constituting the control equipment. The second blank is stamped with the total number of sections in the control equipment (including sections not bearing a UL Listing Mark).

Each Listed equipment section consists of one or more units. Each Listed unit is individually identified as a Listed product.

Classification Mark for Arc-resistant Controllers

The Classification Mark of UL on controllers investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the appropriate Listing Mark (noted above) and the following additional information:

ARC-RESISTANT MOTOR CONTROLLER
ALSO CLASSIFIED IN ACCORDANCE WITH IEEE C37.20.7

or
RESISTIVE-LOAD CONTROLLER
ALSO CLASSIFIED IN ACCORDANCE WITH IEEE C37.20.7

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or removable units. Each vertical section of a line-up of abutting vertical sections is provided with a "___ of ___" marking, where the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Power Conversion Equipment, Medium Voltage (NJIC)

GENERAL

This category covers enclosed power conversion equipment with primary voltage ratings of 1501 to 15 kV, intended for use in accordance with ANSI/NFPA 70, "National Electrical Code." This equipment supplies power to control a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also covers power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for medium-voltage power conversion equipment.

PRODUCT MARKINGS

Medium-voltage power conversion equipment incorporating overload protection for motors is marked to indicate the level of protection provided in percent of full-load current. Where such protection is adjustable, a marking with instructions for adjustment is provided.

Power Conversion Equipment, Medium Voltage (NJIC)—Continued

Equipment not providing motor overload protection is marked to indicate motor protection, such as thermal overload relays, or a thermally protected motor must be otherwise provided.

Medium-voltage power conversion equipment is marked with the following electrical ratings:

- **Input Ratings:** Voltage, maximum continuous input current, frequency, number of phases, maximum allowable system symmetrical short-circuit current, and impulse withstand.
- **Output Ratings:** Maximum output voltage, rated continuous current, frequency range and number of phases.

PRODUCT IDENTITY

The following product identity appears on the product:
Medium-voltage Power Conversion Equipment

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 347A, "Outline of Investigation for Medium Voltage Power Conversion Controllers."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medium Voltage Power Conversion Equipment."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controller Accessories Over 1500 Volts (NJIJ)

USE

This category covers accessories intended for field installation in motor controllers having ac voltage ratings in the range of 1501 V to 15 kV. The motor controllers are intended for starting, stopping, regulating, controlling, or protecting electric motors or other electrical loads, including refrigeration equipment.

PRODUCT IDENTITY

The following product identity appears on the product:
High-voltage Industrial Control Equipment Accessory

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products rated 7200 V or less in this category is ANSI/UL 347, "High Voltage Industrial Control Equipment."

The basic requirements used to investigate products in this category rated 7201 V to 15 kV are contained in UL Subject 347B, "Outline of Investigation for Medium Voltage Motor Controllers, Up to 15 kV."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "High Voltage Industrial Control Equipment Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controller Accessories Over 1500 Volts (NJIJ)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR CONTROL CENTERS (NJAV)

GENERAL

This category covers motor control centers, which are floor-mounted assemblies of one or more enclosed vertical sections having a common horizontal power bus and primarily containing combination motor control units. In addition, motor control centers may contain other types of units, such as relay units, circuit breaker units, disconnect switch units, or panel-board units. Units are mounted one above the other in the vertical sections. Power may be supplied to the individual units by vertical power bus or, if the bus is omitted, by suitable wiring to the horizontal bus.

A combination motor control unit includes an externally operable circuit disconnecting means, branch circuit overcurrent protection, and a motor controller. Motor control centers are intended for installation in accordance with Article 430 of ANSI/NFPA 70, "National Electrical Code."

Motor control center sections and units are rated 600 V maximum. Motor control center sections are rated for the maximum current for horizontal and vertical bus. A motor control center section is marked "Short-circuit current rating amps – RMS symmetrical volts – maximum. Do not install on circuits with available short-circuit currents greater than the lowest short-circuit rating of any installed unit," or the equivalent.

Combination motor control center units are rated in horsepower. A motor control center unit is marked "Unit short-circuit current rating – RMS symmetrical amps – volts maximum, when equipped with fuse or circuit breaker," or the equivalent.

A motor control center section or enclosure investigated for outdoor use is marked "Rainproof." A motor control center enclosure is intended to enclose one or more motor control center sections.

USE AS SERVICE EQUIPMENT

The marking "Suitable For Use As Service Equipment" appears on each motor control center section optionally intended for use at a service.

Some motor control center sections incorporate neutrals factory bonded to the enclosure. Such sections are marked "Suitable Only For Use As Service Equipment."

A section marked for use at services may also be used to provide the main control and disconnecting means for a separately derived system.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
- Motor Control Center Rainproof Enclosure
 - Motor Control Center Section
 - Motor Control Center Unit

RELATED PRODUCTS

For information concerning overcurrent protective devices for motor controllers, see Motor Controllers (NJOT).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 845, "Motor Control Centers."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for motor control center sections also includes the marking "___ of ___." The first space is stamped with a number indicating the position that the section occupies in the series of sections constituting the motor control center. The latter space is stamped with the total number of sections in the motor control center. The Certification Mark on the motor control center section does not cover the individual units that are installed in the section.

The splice bus for interconnecting horizontal bus of abutting vertical sections in the series is also covered by the section Certification Mark.

Each certified motor control center unit is identified by its own Certification Mark. Only those sections and units that bear the Certification Mark are covered under UL's Follow-Up Service.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor Control Center Unit," "Motor Control Center Section" or "Motor Control Center Rainproof Enclosure."

Motor Control Centers (NJAV)—Continued

The Listing Mark for motor control center sections also includes the marking “___ of ___.” The first space is stamped with a number indicating the position that the section occupies in the series of sections constituting the motor control center. The latter space is stamped with the total number of sections in the motor control center. The Listing Mark on the motor control center section does not cover the individual units that are installed in the section.

The splice bus for interconnecting horizontal bus of abutting vertical sections in the series is also covered by the section Listing Mark.

Each Listed motor control center unit is identified by its own Listing Mark. Only those sections and units that bear the Listing Mark are covered under UL’s Follow-Up Service.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Control Center Accessories (NJAX)

USE

This category covers accessories, such as protective devices, wiring terminals, handle extensions and other optional equipment, intended for field installation for use only with specific motor control centers and/or motor control center units. Correct combinations of motor control centers and motor control center accessories are indicated by markings on the accessory and may also be marked on the motor control center. Correct combinations of motor control center units and motor control center unit accessories are indicated by markings on both the motor control center units and the accessory.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Motor Control Center Accessory
 Motor Control Center Unit Accessory

ADDITIONAL INFORMATION

For additional information, see Motor Control Centers (NJAV), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 845, “Motor Control Centers.”

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Motor Control Center Accessory” or “Motor Control Center Unit Accessory.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Retrofit Motor Control Center Units Certified for Use in Specified Equipment (NJBR)

GENERAL

This category covers retrofit motor control center units intended for field installation in specified motor control center sections. These products have been investigated to determine, when used in accordance with the manufacturer’s instructions, they do not adversely affect the operation of the specified motor control center section or other units within the section. The ratings on the unit apply unless the ratings on the motor control center section are lower. In either case the lower rating is applicable.

These retrofit motor control center units include an externally operable circuit-disconnecting means, branch-circuit overcurrent protection, and a motor controller intended for installation in accordance with Article 430 of ANSI/NFPA 70, “National Electrical Code.”

Retrofit Motor Control Center Units Certified for Use in Specified Equipment (NJBR)—Continued

This category does not cover the servicing or rebuilding of previously installed certified motor control center units.

PRODUCT MARKINGS

In addition to other required markings, the nameplate on the retrofit motor control center unit is marked to indicate the specified motor control center section(s) for which it is intended, including the motor control center section manufacturer and type or model number.

RELATED PRODUCTS

See Motor Control Center Accessories (NJAX).

ADDITIONAL INFORMATION

For additional information, see Motor Control Centers (NJAV), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 845, “Motor Control Centers,” in addition to the requirements contained in UL Subject 2727, “Outline of Investigation for Retrofit Motor Control Center Units for Use with Specified Motor Control Center Sections.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**RETROFIT MOTOR CONTROL CENTER UNIT
 FOR USE ONLY IN MOTOR CONTROL CENTER SECTION(S)
 AS DESIGNATED ON THE NAMEPLATE**

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**RETROFIT MOTOR CONTROL CENTER UNIT
 FOR USE ONLY IN MOTOR CONTROL CENTER SECTION(S)
 AS DESIGNATED ON THE NAMEPLATE**

Issue No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR CONTROLLERS (NJOT)

This category covers the following devices rated 600 V or less, and those rated 601–1500 V:

- Auxiliary devices
- Combination motor controllers
- Float- and pressure-operated motor controllers
- Magnetic motor controllers
- Manual motor controllers
- Mechanically-operated and solid-state motor controllers
- Overload relays
- Power conversion equipment

Horsepower ratings — Unless otherwise marked, motor controllers with three-phase horsepower ratings are intended for use with induction-type squirrel cage Design B, C or D motors. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and locked rotor current. For single-phase motors, the tested locked rotor current is at six times the motor full-load running current for ac ratings, and at ten times the motor full-load running current for dc ratings. For three-phase motors, the tested locked rotor current is as in Table 430.251(B) of ANSI/NFPA 70, “National Electrical Code” (NEC). For motor ratings in excess of 500 hp, the full-load current and locked-rotor currents are also specified. Some motor controllers are marked with the full-load current (FLA) and locked-rotor current (LRA) in lieu of horsepower when they are intended to control motors equivalent to 2 hp or smaller.

Overload relay tripping class — Overload relays or industrial control equipment incorporating overload relays are identified as to their maximum tripping time at 600% of the overload relay current-element trip rating. The designations “Class 10,” “Class 20,” and “Class 30” are used to identify the maximum tripping times, with the Class number indicating the maximum tripping time in seconds. Overload relays with maximum tripping times of 10 or 30 seconds are marked “Class 10” and “Class 30,” respectively. Over-

Motor Controllers (NJOT)—Continued

load relays with a maximum tripping time of 20 seconds may be marked "Class 20." Overload relays with tripping times in excess of 30 seconds are marked with their maximum tripping times. All unmarked overload relays have a maximum tripping time of 20 seconds.

Overload relay instructions — Open-type overload relays with replaceable heater elements, or adjustable or electronic settings, are provided with additional instructions on an adhesive-backed label that is intended to be adhered to the ultimate enclosure for the equipment. These instructions also contain short-circuit ratings and required size and type of branch-circuit protection.

Overload relays with ground-fault current-sensing feature — Some overload relays are provided with a ground-fault current-sensing feature that has been investigated as providing additional protection to the motor circuit. This ground-fault current-sensing feature is not intended to be used for ground-fault current protection required by the NEC; see Ground-fault Sensing and Relaying Equipment (KDAX). When this feature is provided and activated/selected, the overload relay is caused to trip when a differential current occurs between phases that is in excess of the pick-up current or tripping curve specified in the manufacturer's instructions.

Branch-circuit-protection requirements — Overload relays, motor controllers and motor starters (e.g., motor controllers incorporating thermal cutouts, thermal overload relays or other devices for motor-running over-current protection) are considered to be suitably protected against overcurrent due to short circuits or grounds by motor branch-circuit, short-circuit and ground-fault protective devices selected in accordance with the NEC and any additional information marked on the product. Motor controllers may specify that protection is to be provided by fuses only or, additionally, by an inverse-time circuit breaker. If there is no marking regarding the protective device type, controllers are considered suitably protected by either type of device. Motor controllers may specify a maximum rating of protective device. If not marked with a rating, the controllers are considered suitably protected by a protective device of the maximum rating permitted by the NEC.

Short-circuit-current rating — Combination motor controllers, overload relays, motor controllers rated more than 1 hp at 300 V or more, motor controllers rated more than 2 hp at any voltage, and motor starters (e.g., motor controllers incorporating thermal cutouts or overload relays) have been investigated as tabulated below. These controllers are marked "Suitable for use on a circuit capable of delivering not more than ___ rms symmetrical amps, ___ volts maximum," or the equivalent. These markings are provided on the motor controller or, for open-type motor controllers, the markings may be located on a separate adhesive-backed label (such as a heater table) packaged with the motor controller.

Motor Controllers Rated 600 V or Less, Max Hp Rating	Motor Controllers Rated 601-1500 V Max Full Load Current, Amps	Min Short-circuit-current Ratings, RMS Symmetrical Amps
1 or less	—	1,000
Over 1 to 50	50 or less	5,000
Over 1 to 200	Over 50 to 200	10,000
Over 200 to 400	Over 200 to 400	18,000
Over 400 to 600	Over 400 to 600	30,000
Over 600 to 900	Over 600 to 850	42,000
Over 900 to 1600	Over 850 to 1500	85,000
Over 1600	Over 1500	100,000

Motor controllers that have additionally been investigated for use at higher available fault currents than the minimum short-circuit-current ratings tabulated are marked "Suitable for use on a circuit capable of delivering not more than ___ rms symmetrical amps, ___ volts maximum when protected by Class ___ fuses or when protected by a circuit breaker having an interrupting rating not less than ___ rms symmetrical amperes, ___ volts maximum," as applicable.

Motor controllers intended for group installations are marked "Suitable for motor group installation on a circuit capable of delivering not more than ___ rms symmetrical amperes, ___ volts maximum."

Manual motor controllers additionally investigated for use as tap conductor protection in accordance with Section 430.53 (D)(3) of the NEC are marked "Suitable for tap conductor protection in group installations."

Controllers intended for electric-motor-driven fire pumps are covered under Pump Controllers, Fire (QYZS).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Adjustable-speed Power Drive Systems with Integral Supply Engine Generators (NKBA)

GENERAL

This category covers adjustable-speed power drive systems that are supplied by stationary electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel-fueled internal-combustion engines. The adjustable-speed drive system supplies power to and controls a motor or motors operating at a frequency or voltage different than the input supply voltage.

Supply connections between the stationary electrical generating equipment and the adjustable-speed power drive systems are factory installed. Adjustable-speed power drive systems with integral supply engine generators are of the enclosed type.

This equipment is rated 600 V or less and intended for use in unclassified locations in accordance with Articles 430 of ANSI/NFPA 70, "National Electrical Code," and ANSI/NFPA 37, "Installation and Use of Stationary Combustion Engines and Gas Turbines."

This category does not cover adjustable-speed power drive systems with integral supply engine generators intended for use in safety-related functions (i.e., functional safety applications), mounted on trailers, or intended for temporary installation.

PRODUCT MARKINGS

Adjustable-speed power drive systems with integral supply engine generators incorporating overload protection for motors and not intended for use with remote or external motor overload protection are marked to indicate the level of protection provided in percent of full-load current. Where such protection is adjustable, a marking with instructions for adjustment is provided. Equipment not providing motor overload protection is marked to indicate motor protection such as thermal overload relays, or a thermally protected motor must be otherwise provided.

Adjustable-speed power drive systems with integral supply engine generators are marked with output motor electrical ratings.

PRODUCT IDENTITY

The following product identity appears on the product:

Adjustable-speed Power Drive System with Integral Supply Engine Generator

RELATED PRODUCTS

Stationary electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel-fueled internal-combustion engines without integral supply connections to adjustable-speed power drive systems is covered under Engine Generators (FTSR).

Adjustable-speed power drive systems without integral supply connections to stationary electrical generating equipment are covered under Power Conversion Equipment (NMMS).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2200, "Stationary Engine Generator Assemblies," in addition to ANSI/UL 508C, "Power Conversion Equipment," or ANSI/UL 61800-5-1, "Adjustable Speed Electrical Power Drive Systems - Part 5-1: Safety Requirements - Electrical, Thermal and Energy."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Adjustable-speed Power Drive System with Integral Supply Engine Generator."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Auxiliary Devices (NKCR)

GENERAL

This category covers:

- Magnetically operated control switches (relays)
- Manually operated switches (push buttons, key-operated switches)
- Biometrically operated switches (fingerprint/optically operated switches)

PRODUCT CATEGORIES BY CATEGORY CODE

Auxiliary Devices (NKCR)—Continued

- Pilot lights
- Push-button stations (including parts such as pilot lights and selector switches)
- Electronic, thermal and magnetic overload relays
- Time-delay relays
- Foot-operated switches
- Flow switches
- Liquid-level controls
- Printed wiring board assemblies incorporating switched outputs

Some pilot lights and push-button assemblies are of a modular construction where individual parts, such as lenses, lampholders, operators and contact blocks, are individually certified and identified for use with mating parts.

These devices are intended for use in control circuits of magnetic motor controllers and the like. The contacts and switched outputs are marked with the voltage rating and whether they are intended for Standard Duty or Heavy Duty, or with a code designation such as A600, B600, etc. These codes represent the control circuit load that may be controlled by the device. The significance of each code is shown in the tables below. Standard Duty indicates ratings under Codes B and P; Heavy Duty indicates ratings under Codes A and N for the marked voltage rating.

Rating Codes for AC Control-circuit Contacts at 50 and 60 Hz

Contact Rating Code Dsg ^a	Thermal Test Current Amps	Max Current Amps ^b								Max Volt-amps	
		120 V		240 V		480 V		600 V		Make	Break
A150	10	60	6.00	—	—	—	—	—	—	7200	720
A300	10	60	6.00	30	3.00	—	—	—	—	7200	720
A600	10	60	6.00	30	3.00	15	1.50	12	1.20	7200	720
B150	5	30	3.00	—	—	—	—	—	—	3600	360
B300	5	30	3.00	15	1.50	—	—	—	—	3600	360
B600	5	30	3.00	15	1.50	7.5	0.75	6	0.60	3600	360
C150	2.5	15	1.5	—	—	—	—	—	—	1800	180
C300	2.5	15	1.5	7.5	0.75	—	—	—	—	1800	180
C600	2.5	15	1.5	7.5	0.75	3.75	0.375	3.00	0.30	1800	180
D150	1.0	3.60	0.60	—	—	—	—	—	—	432	72
D300	1.0	3.60	0.60	1.80	0.30	—	—	—	—	432	72
E150	0.5	1.80	0.30	—	—	—	—	—	—	216	36

^aThe numerical suffix designates the maximum voltage design values, which are to be 600 V, 300 V and 150 V for suffixes 600, 300 and 150, respectively.

^bFor maximum ratings at voltages between the maximum design value and 120 V, the maximum make and break ratings are to be obtained by dividing the volt-ampere rating by the application voltage. For voltages below 120 V, the maximum make current is to be the same as for 120 V, and the maximum break current is to be obtained by dividing the break volt-amperes by the application voltage, but are not to exceed thermal continuous test current.

These devices have not been investigated for providing restricted-access control to machinery or specifically defined areas. Such equipment is investigated to ANSI/UL 294, "Access Control System Units."

These devices have not been investigated with respect to functional-safety applications or as emergency stop switches; see Emergency Stop Devices (NISD).

Rating Codes for DC Control-circuit Contacts

Contact Rating Code Dsg ^a	Thermal Continuous Test Current Amps	Max Make or Break ^b Current Amps			Max Make or Break V Amps at 300 V or Less
		125 V	250 V	301 to 600 V	
N150	10	2.2	—	—	275
N300	10	2.2	1.1	—	275
N600	10	2.2	1.1	0.40	275
P150	5.0	1.1	—	—	138
P300	5.0	1.1	0.55	—	138
P600	5.0	1.1	0.55	0.20	138
Q150	2.5	0.55	—	—	69
Q300	2.5	0.55	0.27	—	69
Q600	2.5	0.55	0.27	0.10	69
R150	1.0	0.22	—	—	28
R300	1.0	0.22	0.11	—	28

^aThe numerical suffix designates the maximum voltage design values, which are to be 600 V, 300 V and 150 V for suffixes 600, 300 and 150, respectively.

^bFor maximum ratings at 300 V or less, the maximum make and break ratings are to be obtained by dividing the volt-ampere rating by the application voltage, but are not to exceed the thermal continuous test current.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Aux. Dev.

Auxiliary Devices (NKCR)—Continued

- Auxiliary Device
- Ind. Cont. Eq.
- Industrial Control Equipment

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear - Part 1: General Rules," and ANSI/UL 60947-5-1, "Low-Voltage Switchgear and Controlgear - Part 5-1: Control Circuit Devices and Switching Elements - Electromechanical Control Circuit Devices."

Electronic, thermal and magnetic overload relays are investigated to ANSI/UL 508, or ANSI/UL 60947-1 and ANSI/UL 60947-4-1, "Low-Voltage Switchgear and Controlgear - Part 4-1: Contactors and Motor-Starters - Electromechanical Contactors and Motor-Starters."

Overload devices providing ground-fault-sensing features are additionally investigated to ANSI/UL 1053, "Ground-Fault Sensing and Relaying Equipment."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Auxiliary Device" (or "Aux. Dev.').

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Combination Motor Controllers (NKJH)

USE AND INSTALLATION

This category covers combination motor controllers, which provide the motor branch-circuit functions of motor controller, disconnect means, short-circuit and ground-fault protection and motor overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

These products are marked "Combination Motor Controller" to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the certification of the controller.

An open-type combination motor controller is intended for factory installation in a switchboard, motor control center, industrial control panel or the like, or for field installation in an enclosure for industrial control equipment, a cabinet or a cutout box.

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Comb. Mtr. Cntrl.
- Combination Motor Controller

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear - Part 1: General Rules," and ANSI/UL 60947-4-1, "Low-Voltage Switchgear and Controlgear - Part 4-1: Contactors and Motor-Starters - Electromechanical Contactors and Motor-Starters."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Float- and Pressure-operated (NKPZ)

USE

This category covers:

- Float-operated switches, including weight-operated switches
- Pressure-operated switches, including vacuum-operated switches

These devices are intended for direct control of motors and/or control of general-use-type loads.

Unless otherwise marked, these devices are intended for use only with air, water, or other nonhazardous fluids.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Ind. Cont. Eq.
- Industrial Control Equipment

RELATED PRODUCTS

Pressure-operated switches investigated for use in connection with automatic sprinkler or similar protective equipment are covered under Switches, Pressure (VOXZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Magnetic (NLDX)

GENERAL

This category covers:

- Across-the-line starters
- Across-the-line starters with motor circuit switches
- Combined starters and speed regulators
- Reduced-voltage starters, such as autotransformer, part-winding wye-delta, reactance and resistant types
- Speed regulators

Magnetic motor controllers have been tested to determine their acceptability for continuous operation at their marked rated load.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Ind. Cont. Eq.
- Industrial Control Equipment
- Mag. Mtr. Cntrlr.
- Magnetic Motor Controller

Motor Controllers, Magnetic (NLDX)—Continued

RELATED PRODUCTS

Magnetic switches for controlling other than motor loads are covered under Switches, Industrial Control (NRNT).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear – Part 1: General Rules," and ANSI/UL 60947-4-1, "Low-Voltage Switchgear and Controlgear – Part 4-1: Contactors and Motor-Starters – Electromechanical Contactors and Motor-Starters."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Manual (NLRV)

GENERAL

This category covers the following manually-operated devices intended for across-the-line starting of motors:

- Across-the-line starters
- Autotransformer starters
- Combined starters and speed regulators
- Reactance-type starters
- Resistance-type starters
- Speed regulators

Motor disconnect switch — Manual motor controllers that have been additionally investigated for use as a motor disconnect switch are marked "Suitable as Motor Disconnect." These devices are intended to be installed on the load side of motor branch-circuit protection in accordance with Section 430.109(A)(6) of ANSI/NFPA 70, "National Electrical Code" (NEC).

Tap conductor protection — Manual motor controllers that have been additionally investigated for use as tap conductor protection within a motor group are marked "Suitable as Tap Conductor Protection in Group Installations." These devices are intended to be installed on the load side of motor branch-circuit protection for a motor group in accordance with Section 430.53(D)(3) of the NEC.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Man. Mtr. Cntrlr.
- Manual Motor Controller

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear – Part 1: General Rules," and ANSI/UL 60947-4-1, "Low-Voltage Switchgear and Controlgear – Part 4-1: Contactors and Motor-Starters – Electromechanical Contactors and Motor-Starters."

Motor Controllers, Mechanically Operated and Solid-state (NMFT)

GENERAL

This category covers the following devices intended for across-the-line starting of motors:

- Flow-operated motor controllers
- Machine-operated motor controllers
- Soft starters
- Solid-state starters
- Solid-state reduced-voltage starters
- Solid-state speed controls

These devices are intended for the direct control of motors.

Mechanically operated and solid-state motor controllers have been tested to determine their acceptability for continuous operation at their marked rated motor load.

REBUILT PRODUCTS

This category also covers mechanically operated and solid-state motor controllers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt mechanically operated and solid-state motor controllers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt mechanically operated and solid-state motor controllers are subject to the same requirements as new mechanically operated and solid-state motor controllers.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Ind. Cont. Eq.
- Industrial Control Equipment
- Solid-state Motor Controller
- Solid-state Reduced-voltage Starter

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Devices intended for use in control circuits of magnetic motor controllers and the like are covered under Auxiliary Devices (NKCR).

Devices intended for use in nonmotor circuits other than motor control circuits are covered under Switches, Industrial Control (NRNT).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear - Part 1: General Rules," and ANSI/UL 60947-4-2, "Low-Voltage Switchgear and Controlgear - Part 4-2: Contactors and Motor-Starters - AC Semiconductor Motor Controllers and Starters."

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

Motor Controllers, Mechanically Operated and Solid-state (NMFT)—Continued

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Power Conversion Equipment (NMMS)

GENERAL

This category covers equipment that supplies power to and controls a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also covers power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for power conversion equipment. Power conversion equipment may be of the open or enclosed type. This equipment is intended for use in ordinary locations in accordance with Articles 430 and 440 of ANSI/NFPA 70, "National Electrical Code."

Power conversion equipment incorporating overload protection for motors and not intended for use with remote or external motor overload protection is marked to indicate the level of protection provided in percent of full load current. Where such protection is adjustable, a marking with instructions for adjustment is provided. Equipment not providing motor overload protection is marked to indicate motor protection such as thermal overload relays, or a thermally protected motor must be otherwise provided.

Power conversion equipment is marked with input electrical ratings and output motor electrical ratings.

This category does not cover power conversion equipment intended for use in safety-related functions (i.e., functional safety applications).

REBUILT PRODUCTS

This category also covers power conversion equipment that is rebuilt by the original manufacturer or by the Applicant's authorized manufacturer as found in the original product Follow-Up Service Procedure Authorization Page or Addendum to the Follow-Up Service Procedure Authorization Page. Rebuilt power conversion equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power conversion equipment is subject to the same requirements as new power conversion equipment, including production-line tests as applicable.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Ind. Cont. Eq.
- Industrial Control Equipment
- Power Conversion Equipment

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product identity.

RELATED PRODUCTS

Power conversion equipment rated over 1500 V is covered under Power Conversion Equipment, Medium Voltage (NJIC).

Equipment intended to provide a primary, secondary, or primary and secondary power source to nonspecific loads in parallel or separate from the utility is investigated in accordance with UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources," and covered under Static Inverters and Converters for Use in Independent Power Systems (QIKH). Examples of this equipment are utility interactive, stand-alone, and multimode inverters and converters.

Products in which industrial-use power conversion equipment is integrated with a motor may be covered under Electronically Protected Motors with Integral Controllers for Industrial Use (XDNZ).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508C, "Power Conversion Equipment," or ANSI/UL 61800-5-1, "Adjustable Speed Electrical Power Drive Systems - Part 5-1: Safety Requirements - Electrical, Thermal and Energy."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Power Conversion Equipment."

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

Power Conversion Equipment (NMMS)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MANUAL-DISCONNECT SWITCHES (NMSJ)

USE

This category covers open and enclosed manual-disconnect switches intended for use in photovoltaic (PV) systems. These devices are intended for disconnecting the output of dc PV panels.

PRODUCT MARKINGS

In addition to the product markings required in ANSI/UL 508, "Industrial Control Equipment," these devices are also marked with: "Suitable as photovoltaic disconnect switch in accordance with Article 690 of NFPA 70 (NEC)."

PRODUCT IDENTITY

One of the following product identities appears on the product:
Photovoltaic Manual-disconnect Switch
PV Manual-disconnect Switch

RELATED PRODUCTS

Controllers intended for the direct control of motors are rated in horsepower and are covered under Motor Controllers, Magnetic (NLDX). Manual motor controllers and manual motor controllers suitable for disconnecting motor loads are covered under Motor Controllers, Manual (NLRV).

Mechanically operated and solid-state motor controllers are covered under Motor Controllers, Mechanically Operated and Solid-state (NMFT).

Industrial control switches intended for switching nonmotor loads are covered under Switches, Industrial Control (NRNT2).

Magnetic switches for controlling other than motor loads are covered under Switches, Industrial Control (NRNT).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," in addition to the requirements contained in UL Subject 508L, "Outline of Investigation for Manual Disconnect Switches for Use in Photovoltaic Systems."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Manual-disconnect Switch" (or "PV Manual-disconnect Switch").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER CIRCUIT AND MOTOR-MOUNTED APPARATUS (NMTR)

GENERAL

This category covers autotransformers, including motor-starting and variable-voltage types; battery chargers for industrial use; magnetically operated brakes; magnetically operated clutches; busbars; enclosed slip rings; lamp dimmers, including incandescent, fluorescent, mercury vapor, surgical light and theater use; phase converters; power-factor-correction equipment; power supplies for industrial use; reactors, including line chokes; current transformers and current transducers; voltage transformers and voltage transducers; and resistors, including motor-starting, rheostats, potentiometers, and high-impedance grounding types.

A brake or clutch may consist of several parts with the Certification Mark appearing on the main electrical part (e.g., field coil). Where other part(s) are essential to complete a certified assembly, the basic unit is marked to indicate the parts needed.

Power Circuit and Motor-mounted Apparatus (NMTR)—Continued

PRODUCT IDENTITY

One of the following product identities appears on the product:
Ind. Cont. Eq.
Industrial Control Equipment

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROGRAMMABLE CONTROLLERS (NRAQ)

GENERAL

This category covers programmable industrial control systems utilizing a programmable memory for internal storage of user-oriented instructions for specific functions, such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also covers power supplies, central processing units, input and output accessories, computer interfaces, and programming or program diagnostic units associated with programmable control systems.

All products covered under this category are marked with their electrical ratings. Output devices may have more than one rating. At least one rating is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

RECONDITIONED PRODUCTS

This category also covers programmable controllers and their accessories which have been reconditioned by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. (Reconditioned programmable controllers and their accessories may also be referred to as rebuilt.) Reconditioned programmable controllers and their accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Reconditioned programmable controllers and their accessories are subject to the same requirements as new programmable controllers and their accessories.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Ind. Cont. Eq.
Industrial Control Equipment
Prog. Cntrl.
Programmable Controller

For reconditioned products, the word "Reconditioned" or "Rebuilt" precedes the product identity.

RELATED PRODUCTS

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas-, gas-oil-, or oil-fired appliances. Such controls are covered under Controls, Primary Safety (MCCZ).

This category does not cover equipment intended for use in applications involving instruments for measurement, recording and/or control of process variables (such as temperature, pressure, flow, etc.) and auxiliary devices used with these instruments, such as sensors, transducers and valve operations. Such equipment is covered under Process Control Equipment, Electrical (QUYX).

This category does not cover programmable controllers intended for use in safety-related functions (i.e., functional safety applications). Such controllers are covered under Programmable Safety Controllers (NRGF).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

Programmable Controllers (NRAQ)—Continued

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," ANSI/UL 61131-2, "Programmable Controllers – Part 2: Equipment Requirements and Tests," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements," and ANSI/UL 61010-2-201, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-201: Particular Requirements for Control Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Programmable Controller" (or "Prog. Cntrlr.>").

For reconditioned products, the word "Reconditioned" or "Rebuilt" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROGRAMMABLE CONTROLLERS, RETROFIT, CERTIFIED FOR USE IN SPECIFIED EQUIPMENT (NRCQ)

GENERAL

This category covers certified programmable controller retrofit kits intended for use in specified equipment in general industrial-use applications. This equipment is rated 600 V or less and is intended for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). This equipment is suitable for use in lieu of certified programmable controllers. These products have been investigated by UL to determine that, when used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete unit.

These programmable controller retrofit kits require field assembly of modules or subassemblies, which are appropriately marked as indicated below.

Programmable controller retrofit kits are intended to be used to replace programmable controllers installed in the field using conversion modules, mounting hardware and associated wiring harnesses that permit the existing programmable controller wiring connectors to be used, allowing the remainder of the existing programmable controller to be replaced. The specific replacement programmable controller conversion modules, wiring harnesses, I/O modules, power-supply modules, etc., are identified as to which specific installed modules they are intended to replace.

A programmable controller utilizes a programmable memory for internal storage of user-oriented instructions for specific functions, such as logic, sequencing, counting, and control of various industrial equipment through digital or analog inputs or outputs. This category also covers power supplies, central processing units, input and output accessories, interfaces, and programming or program diagnostic units associated with programmable control systems.

This category does not cover the retrofit of functional safety programmable controllers.

PRODUCT MARKINGS

Programmable controller retrofit kits are marked "Classified for use only with Model ____ [product identifier as indicated in the individual certifications]."

RELATED PRODUCTS

Programmable controllers are covered under Programmable Controllers (NRAQ).

Programmable controllers intended for use in functional safety applications are covered under Programmable Safety Controllers (NRGF).

Primary safety controls intended for programming and monitoring the operation of the burner on gas, gas-oil, or oil-fired appliances are covered under Controls, Primary Safety (MCCZ).

Equipment intended for use in applications involving instruments for measurement, recording and/or control of process variables (such as temperature, pressure, flow, etc.) and auxiliary devices used with these instru-

ments, such as sensors, transducers and valve operations are covered under Process Control Equipment, Electrical (QUYY).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

PROGRAMMABLE CONTROLLER, RETROFIT FOR USE ONLY WITH + IDENTIFIED IN MANUFACTURER'S INSTRUCTIONS

+ CONVERSION MODULE NO. ____ or WIRING CABLE MODULE NO. ____, or other appropriate product identity as shown in the individual certifications

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

PROGRAMMABLE CONTROLLER, RETROFIT FOR USE ONLY WITH + IDENTIFIED IN MANUFACTURER'S INSTRUCTIONS

Control No.

+ CONVERSION MODULE NO. XXX or WIRING CABLE MODULE NO. XXX, or other appropriate product name as shown in the individual Classifications

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROGRAMMABLE SAFETY CONTROLLERS (NRGF)

USE AND INSTALLATION

This category covers control equipment incorporating software for use in safety-related functions. These devices are primarily intended to detect unsafe conditions, to alert operators, and/or take action based on out-of-specification parameters to place the equipment-under-control or system into a safe configuration. These devices may additionally have facilities for performing functions such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs, including dedicated safety bus architecture.

This category also covers power supplies, central processing units, input and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

This category does not cover wireless communication and nondedicated communication architecture.

These products fulfill their safety-related function only when used in accordance with the manufacturer's instructions. The equipment covered under this category has been found suitable for the implementation of safety-related control functions with a safety integrity level as stated in the manufacturer's documentation and as defined in IEC 61508-1, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 1: General Requirements," IEC 61508-2, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 2: Requirements for Electrical/Electronic/Programmable Electronic Safety-Related Systems," and IEC 61508-3, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 3: Software Requirements."

RATINGS

All products covered under this category are marked with their electrical ratings. Output devices may have more than one rating. At least one rating is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

PRODUCT IDENTITY

Programmable Safety Controllers (NRGF)—Continued

One of the following product identities appears on the product:
 Programmable Safety Controller
 Safety-related Control Device
 SRCD

RELATED PRODUCTS

This category does not cover programmable devices whose primary function is the control of industrial equipment. For those controls, see Programmable Controllers (NRAQ).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:
 ANSI/UL 508, "Industrial Control Equipment"
 ANSI/UL 1998, "Software in Programmable Components"
 ANSI/NFPA 79 (2002), "Electrical Standard for Industrial Machinery"
 IEC 61508-1, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 1: General Requirements"
 IEC 61508-2, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 2: Requirements for Electrical/Electronic/Programmable Electronic Safety-Related Systems"
 IEC 61508-3, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 3: Software Requirements"

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Programmable Safety Controller" or "Safety Related Control Device" (or "SRCD").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTIVE RELAYS (NRGU)

GENERAL

This category covers relays of types directly associated with power switchgear. Typical devices covered under this category are instantaneous-current relays, voltage-imbalance relays, high-speed differential relays, dc timing relays, time-overcurrent relays, reverse-power relays, and the like.

These devices are intended to make or transfer current only, and to operate only under abnormal conditions.

This category does not cover overload relays of types designed primarily for industrial control or types used with communication, traffic signaling, computer switching, or other equipment not intended for the direct control of power equipment. The ability of these relays to detect an internal arc or to provide additional protection for equipment or operating personnel has not been investigated. It has not been determined that these relays provide compliance with ANSI/NFPA 70E, "Electrical Safety in the Workplace."

Instrument transformers are not evaluated as part of the investigation, unless the manufacturer provides the instrument transformer as part of the protective relay.

These devices are intended for use in circuits rated 600 V maximum. They may be used to monitor circuits of higher voltage, when suitably rated instrument transformers are used in conjunction with these devices, such that the voltage input to the protective relay is 600 V or less.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Ind. Con. Eq.
 Industrial Control Equipment

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

Protective Relays (NRGU)—Continued

The basic standard used to investigate products in this category that include ground-fault protection for equipment is ANSI/UL 1053, "Ground-Fault Sensing and Relaying Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROXIMITY SWITCHES (NRKH)

USE

This category covers electronic switching devices that are actuated by position of an object without mechanical contact with the object. These proximity switches respond to inductive, capacitive, LED or photoelectric effects.

These devices are intended for use on industrial machinery or mass production industrial equipment as defined by ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

PRODUCT MARKINGS

The devices are marked with electrical ratings. At least one rating is marked on the product and additional ratings may be marked on an instruction sheet shipped with the device.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Ind. Con. Eq.
 Industrial Control Equipment
 Proximity Switch

RELATED PRODUCTS

This category does not cover equipment intended for use in safety-related functions, such as electro-sensitive protective equipment (ESPE) for the safeguarding of machinery that presents a risk of personal injury (e.g., light curtains). Such equipment is covered under Electro-sensitive Protective Equipment (NIOZ).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear – Part 1: General Rules," and ANSI/UL 60947-5-2, "Low-Voltage Switchgear and Controlgear – Part 5-2: Control Circuit Devices and Switching Elements – Proximity Switches."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, INDUSTRIAL CONTROL (NRNT)

GENERAL

This category covers:

- Magnetically operated switches
- Manually operated switches
- Photoelectric switches
- Solid-state switches

These devices are intended for the direct control of nonmotor-rated loads. Open-type switches are certified for use as parts of equipment where the acceptability of the combination has been determined by UL or where open-type switches may be employed.

Switches have been tested to determine their acceptability for continuous operation at their marked rated load.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Ind. Cont. Eq.
- Ind. Cont. Switch
- Industrial Control Equipment
- Industrial Control Switch

RELATED PRODUCTS

Switches intended for the direct control of motors are rated in horsepower and are covered under Motor Controllers, Magnetic (NLDX), Motor Controllers, Manual (NLRV) and Motor Controllers, Mechanically-operated and Solid-state (NMFT).

Switches intended for use in motor-control circuits are rated in pilot-duty code or volt-amperes and are covered under Auxiliary Devices (NKCR).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear - Part 1: General Rules," and ANSI/UL 60947-4-1, "Low-Voltage Switchgear and Controlgear - Part 4-1: Contactors and Motor-Starters - Electromechanical Contactors and Motor-Starters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Industrial Control Switch" (or "Ind. Cont. Switch").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

This category covers the following devices for use in hazardous (classified) locations:

- Auxiliary devices
- Combination motor controllers
- Control assembly covers
- Control panels and assemblies
- Enclosed slip rings
- Flame-control panels
- Float- and pressure-operated motor controllers
- Magnetic motor controllers
- Manual motor controllers
- Miscellaneous motor controllers
- Motor controllers over 1500 volts

- Power circuit and motor-mounted apparatus
- Power conversion equipment
- Programmable controllers

Open-type equipment — Open-type industrial control equipment is intended for installation within a suitable enclosure. Examples of installation issues to consider when determining the suitability of the equipment enclosure include the following, as applicable: 1) the involved area classification, 2) protection against any specific environmental conditions, 3) thread engagement, and 4) whether a tool is required for opening of the enclosure. Installation requirements relating to the suitability of the enclosure are specified in the instructions or markings for the open-type equipment.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL PANELS AND ASSEMBLIES FOR USE IN HAZARDOUS LOCATIONS (NNNY)

GENERAL

This category covers control panels and assemblies consisting of enclosures and electrical components such as push-button stations, pilot lights, motor controllers, and receptacles with plugs.

A single enclosure or a group of interconnected (modular) enclosures may be used for mounting the electrical components.

The enclosures making up a modular assembly are intended to be interconnected either at the factory or in the field by the user. Limitations on the interconnection of the enclosures are given on or with the product.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

It is intended that wiring between the electrical components of modular assemblies be field installed.

Lead wire seals are not required between the modular enclosures. However, conduit runs entering an assembly should be sealed in accordance with ANSI/NFPA 70, "National Electrical Code," unless factory-made seals are provided and the product is marked to so indicate.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor-running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other certified ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for ac horsepower ratings, and at 10 times motor full load running current for dc horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

Receptacles with plugs included on certified assemblies have been subjected to endurance and overload operation tests in the presence of the specific flammable atmospheres for Class I locations and while heavily blanketed with combustible dust for Class II locations.

The plugs of the receptacle-plug combinations are for use with Type S, SO, ST or STO flexible cord with grounding conductor.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which those assemblies having receptacles with plugs will be permitted for use. It is recognized that portable equipment should be used only where necessary.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Control Assembly Body for Use in Hazardous Locations
- Control Assembly Cover for Use in Hazardous Locations
- Control Panel for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Control Assembly Covers for Use in Hazardous Locations (NNRL)

USE AND INSTALLATION

This category covers control assembly covers consisting of devices such as push-button stations, pilot lights, snap switches, motor controllers or receptacles certified for use only with specific models of certified control assembly bodies or plugs for hazardous locations as specified in the installation instructions provided with the cover.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor-running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other certified ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for ac horsepower ratings, and at 10 times motor full load running current for dc horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

The plugs are for use with Type S, SO, ST or STO flexible cord having a grounding conductor. The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which plugs and receptacles will be permitted for use. It is recognized that portable equipment should be used only where necessary. Receptacles and plugs certified for use in Class II, Group F locations are for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

Flame-control Panels for Use in Hazardous Locations (NNTE)

GENERAL

This category covers flame-control panels intended for application in the control of fossil-fuel-burning equipment, such as incinerators, kilns and drying ovens. Flame-control panels have been certified only as to electrical fire and shock hazards. The compatibility of the panel with the controlled equipment from the standpoint of programming the burner(s) and preventing hazardous conditions due to firing of fuel has not been determined.

PRODUCT IDENTITY

The following product identity appears on the product:
Flame-control Panel for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Control Panels and Assemblies for Use in Hazardous Locations (NNNY), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 508A, "Industrial Control Panels."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. Products covered under this category are additionally marked with the following information:

AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

PRODUCT CATEGORIES BY CATEGORY CODE

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

Flame-control Panels for Use in Hazardous Locations (NNTÉ)—Continued

FLAME-CONTROL PANEL FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY
No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENCLOSED SLIP RINGS FOR USE IN HAZARDOUS LOCATIONS (NNTR)

USE AND INSTALLATION

This category covers enclosed slip rings intended to transfer power to industrial equipment. A terminal compartment is provided for connection to threaded rigid conduit systems.

PRODUCT IDENTITY

The following product identity appears on the product:
Enclosed Slip Ring for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Slip Ring for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS (NNUX)

Motor controllers are Listed under the following categories with maximum ratings of 200 hp and/or 300 amp and 600 V:

- Auxiliary Devices
- Combination Motor Controllers
- Float- and Pressure-Operated Motor Controllers
- Magnetic Motor Controllers
- Manual Motor Controllers
- Miscellaneous Motor Controllers

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings and at ten times motor full load running current for d-c horsepower ratings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

Auxiliary Devices for Use in Hazardous Locations (NOIV)

USE AND INSTALLATION

This category covers auxiliary devices intended for use in control circuits of magnetic motor controllers and the like, and consist of the following devices: machine-operated switches, push-button stations (including pilot lights and selector switches), magnetically operated switches, and miscellaneous manually operated switches.

Auxiliary devices provided with a factory seal of conductors entering the pilot light or switch enclosure are so identified by a marking on the product.

Pilot lights without guards should be used only where not subject to breakage.

Enclosures furnished without mechanisms are marked to identify the mechanisms that are to be used.

RECONDITIONED PRODUCTS

This category also covers auxiliary devices that have been reconditioned. Reconditioned auxiliary devices may also be referred to as rebuilt. Reconditioned auxiliary devices are factory reconditioned to the extent necessary by disassembly and reassembly using new or reconditioned component parts. The reconditioned auxiliary devices are subject to the same requirements as new auxiliary devices.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Industrial Control Equipment for Hazardous Locations
Industrial Control Equipment for Use in Hazardous Locations
Industrial Control Equipment Enclosure for Hazardous Locations
Industrial Control Equipment Enclosure for Use in Hazardous Locations

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

For reconditioned products, the word "Reconditioned" or "Rebuilt" precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

Electronic, thermal and magnetic overload relays in this category are investigated to ANSI/UL 508, or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear – Part 1: General Rules," and ANSI/UL 60947-4-1A, "Low-Voltage Switchgear and Controlgear – Part 4-1A: Contactors and Motor-Starters – Electromechanical Contactors and Motor-Starters."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Note: The standard edition and any revision date, if applicable, of the basic unclassified locations standard(s) used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Industrial Control Equipment for Hazardous Locations," "Industrial Control Equipment Enclosure for Hazardous Locations," "Industrial Control Equipment for Use in Hazardous Locations" or "Industrial Control Equipment Enclosure for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq.;" the words "Hazardous Locations" may be abbreviated "Haz. Loc.;" For reconditioned products, the product name is preceded by "Reconditioned" or "Rebuilt."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Combination Motor Controllers for Use in Hazardous Locations (NOTH)

GENERAL

This category covers combination motor controllers, which provide the motor branch-circuit functions of the motor controller, disconnect means, short-circuit and ground-fault protection and overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

Combination motor controllers are marked "Combination Motor Controller" to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the certification of the controller.

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

Enclosures furnished without mechanisms are marked to identify the mechanisms which should be used.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Industrial Control Equipment Enclosure for Hazardous Locations
 Industrial Control Equipment Enclosure for Use in Hazardous Locations
 Industrial Control Equipment for Hazardous Locations
 Industrial Control Equipment for Use in Hazardous Locations
 The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Industrial Control Equipment for Hazardous Locations," "Industrial Control Equipment Enclosure for Hazardous Locations," "Industrial Control Equipment for Use in Hazardous Locations" or "Industrial Control Equipment Enclosure for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Float- and Pressure-operated Motor Controllers for Use in Hazardous Locations (NOWT)

USE

This category covers float- and pressure-operated switches, including vacuum-operated switches. These devices are for direct control of motors, use in control circuits of magnetic motor controllers and the like, and control of other types of loads.

Unless otherwise indicated on the individual products, these devices are intended for use only with air, water, or other nonhazardous fluids.

Unless otherwise indicated on the individual products, these devices are intended for use in an ambient temperature normally prevailing in habitable spaces, and for use with fluids at such a temperature.

These devices have not been investigated for use in connection with automatic sprinkler or similar protective equipment.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Industrial Control Equipment for Hazardous Locations
 Industrial Control Equipment for Use in Hazardous Locations
 The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

ADDITIONAL INFORMATION

Float- and Pressure-operated Motor Controllers for Use in Hazardous Locations (NOWT)—Continued

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Hazardous Locations" or "Industrial Control Equipment for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Magnetic Motor Controllers for Use in Hazardous Locations (NPKR)

GENERAL

This category covers magnetic cross-the-line starters. Safety of operation of oil immersed-type starters will be endangered should the oil level be below the minimum shown by the indicator. These devices should be installed with a certified sealing fitting adjacent to each opening where threaded rigid conduit is connected.

Enclosures furnished without mechanisms are marked to identify the mechanisms which should be used.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Industrial Control Equipment Enclosure for Hazardous Locations
 Industrial Control Equipment Enclosure for Use in Hazardous Locations
 Industrial Control Equipment for Hazardous Locations
 Industrial Control Equipment for Use in Hazardous Locations
 The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

RELATED PRODUCTS

Magnetic switches for controlling other than motor loads are covered under Auxiliary Devices for Use in Hazardous Locations (NOIV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear - Part 1: General Rules," and ANSI/UL 60947-4-1A, "Low-Voltage Switchgear and Controlgear - Part 4-1A: Contactors and Motor-Starters - Electromechanical Contactors and Motor-Starters."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Note: The standard edition and any revision date, if applicable, of the basic unclassified locations standard(s) used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Manual Motor Controllers for Use in Hazardous Locations (NPXZ)

GENERAL

This category covers manual across-the-line starters. Overload units are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other certified ratings in order that proper overload units may be furnished.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Industrial Control Equipment for Hazardous Locations
 Industrial Control Equipment for Use in Hazardous Locations
 The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Mechanically Operated and Solid-state for Use in Hazardous Locations (NQLX)

USE

This category covers devices intended for the direct control of motors. Unless otherwise indicated on the product, these devices are intended for use in an ambient temperature normally prevailing in habitable spaces, and for use with fluids at such a temperature. These devices have not been investigated for use in locations having automatic fire sprinklers.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Industrial Control Equipment for Hazardous Locations
 Industrial Control Equipment for Use in Hazardous Locations

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

Motor Controllers, Mechanically Operated and Solid-state for Use in Hazardous Locations (NQLX)—Continued

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Devices for use in control circuits of magnetic motor controllers and the like are covered under Auxiliary Devices for Use in Hazardous Locations (NOIV).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Power Conversion Equipment for Use in Hazardous Locations (NQMD)

USE

This category covers equipment that supplies power to control a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also includes power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for power conversion equipment. Power conversion equipment may be of the open or enclosed type. This equipment is intended for use in hazardous (classified) locations in accordance with Article 500 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Power conversion equipment incorporating overload protection for motors and not intended for remote or external motor overload protection is marked to indicate the level of protection provided in percent of full load current. Where such protection is adjustable, a marking with instructions for adjustment is provided. Equipment not providing motor overload protection is marked to indicate motor protection, such as thermal overload relays, or a thermally protected motor must be otherwise provided.

Power conversion equipment is marked with input and output electrical ratings.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Ind. Cont. Eq. for Use in Haz. Loc.
 Industrial Control Equipment for Use in Hazardous Locations
 Power Conversion Equipment for Use in Hazardous Locations
 Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508C, "Power Conversion Equipment," or ANSI/UL 61800-5-1, "Adjustable Speed Electrical Power Drive Systems - Part 5-1: Safety Requirements - Electrical, Thermal and Energy."

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

Cont. Eq. for Use in Haz. Loc.") or "Power Conversion Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR CONTROLLERS OVER 1500 VOLTS FOR USE IN HAZARDOUS LOCATIONS (NRAA)

GENERAL

This category covers enclosed motor controllers having ac voltage ratings in the ranges of 2.2 kV to 2.5 kV or 3.8 kV to 5.0 kV, intended for starting, stopping, regulating, controlling, or protecting electric motors or other electrical loads, including refrigeration equipment.

This equipment has been investigated for use on three-phase circuits having available fault levels not exceeding the MVA rating appearing on the nameplate. The three-phase available symmetrical MVA is equal to the product of the available symmetrical rms short-circuit current, the line-to-line open-circuit voltage, and a phase factor of 1.73×10^6 .

Motor controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, accordingly they are tested at six times the continuous current rating of the controller at rated voltage.

Some motor controllers are provided with an integrally mounted surge arrester to meet the required impulse withstand.

These motor controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

PRODUCT IDENTITY

The following product identity appears on the product:

High-voltage Industrial Control Equipment for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 347, "High Voltage Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

Motor Controllers Over 1500 Volts for Use in Hazardous Locations (NRAA)—Continued

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "High Voltage Industrial Control Equipment for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER CIRCUIT AND MOTOR-MOUNTED APPARATUS FOR USE IN HAZARDOUS LOCATIONS (NRAD)

GENERAL

This category covers autotransformers, including motor-starting and variable-voltage types; battery chargers for industrial use; magnetically operated brakes; busbars; magnetically operated clutches; enclosed slip rings; lamp dimmers, including incandescent, fluorescent, mercury vapor, surgical light and theater use; phase converters; power factor correction equipment; power supplies for industrial use; reactors, including line chokes; and resistors, including motor-starting, rheostats, potentiometers, and high-impedance grounding types.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Industrial Control Equipment for Hazardous Locations
Industrial Control Equipment for Use in Hazardous Locations

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Use in Hazardous Locations" or "Industrial Control Equipment for Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq.,"; the words "Hazardous Locations" may be abbreviated "Haz. Loc."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROGRAMMABLE CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS (NRAG)

GENERAL

This category covers programmable industrial control systems utilizing a programmable memory for internal storage of user-oriented instructions for specific functions, such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also covers power supplies, central processing units, input

PRODUCT CATEGORIES BY CATEGORY CODE

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

Programmable Controllers for Use in Hazardous Locations (NRAG)—Continued

and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

All products covered under this category are marked with their electrical ratings. Output devices may have more than one rating. At least one rating is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas-, gas-oil-, or oil-fired appliances.

This category does not cover programmable controllers intended for use in safety-related functions (i.e., functional-safety applications).

REBUILT PRODUCTS

This category also covers programmable controllers and their accessories that are rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt programmable controllers and their accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt programmable controllers and their accessories are subject to the same requirements as new programmable controllers and their accessories.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Industrial Control Equipment for Hazardous Locations
- Industrial Control Equipment for Use in Hazardous Locations
- Programmable Controller for Use in Hazardous Locations

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

The words "Programmable Controller" may be abbreviated "Prog. Cntrl."

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements," and ANSI/UL 61010-2-201, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-201: Particular Requirements for Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Note: The standard edition and any revision date, if applicable, of the basic unclassified locations standard(s) used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Use in Hazardous Locations" (or "Ind. Cont. Eq. for Use in Haz. Loc."), "Industrial Control Equipment for Hazardous Locations" (or "Ind. Cont. Eq. for Haz. Loc.") or "Programmable Controller for Use in Hazardous Locations" (or "Prog. Cntrl. for Use in Haz. Loc."), or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured," "Reconditioned" or "Refurbished" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL EQUIPMENT RELATING TO HAZARDOUS LOCATIONS (NRAW)

INDUSTRIAL CONTROL EQUIPMENT RELATING TO HAZARDOUS LOCATIONS (NRAW)

INDUSTRIAL CONTROL PANELS RELATING TO HAZARDOUS LOCATIONS (NRBX)

GENERAL

This category covers industrial control panels relating to hazardous locations, which are factory-wired assemblies of industrial control equipment such as motor controllers, switches, relays and auxiliary devices. The panels may include disconnect means and motor branch-circuit-protective devices.

Industrial control panels relating to hazardous locations are intended for installation in unclassified locations. They are provided with intrinsically safe (low energy) circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

For intrinsically safe circuits, the energy level available in the hazardous location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated equipment be installed and interconnected in accordance with the instructions provided. The intrinsically safe circuit wiring must be routed in a separate raceway or otherwise reliably segregated from all power and other circuit wiring to preclude excessive currents and voltages from being impressed on the intrinsically safe circuit, rendering it nonintrinsically safe.

The investigation of industrial control panels relating to hazardous locations does not include investigation of the function of the controlled equipment.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Enclosed Industrial Control Panel Relating to Hazardous Locations with Intrinsically Safe Circuit Extensions
- Industrial Control Panel Relating to Hazardous Locations with Intrinsically Safe Circuit Extensions

RELATED PRODUCTS

Industrial control panels for general use and for metal-working-machine tools for use in unclassified locations are covered under Industrial Control Panels (NITW).

Equipment that has been investigated for use only in the classified locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 508A, "Industrial Control Panels,"

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 698A, "Industrial Control Panels Relating to Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Panel Relating to Hazardous Locations" or "Enclosed Industrial Control Panel Relating to Hazardous Locations" and the statement "with Intrinsically Safe Circuit Extensions."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR CONTROLLERS RELATING TO HAZARDOUS LOCATIONS (NRCY)

GENERAL

This category covers auxiliary devices and magnetic motor controllers.

These devices are for use in unclassified (ordinary) locations. They contain intrinsically safe circuits intended for extension into hazardous (classified) locations.

INDUSTRIAL CONTROL EQUIPMENT RELATING TO HAZARDOUS LOCATIONS (NRAW)

Motor Controllers Relating to Hazardous Locations (NRCY)–Continued

Motor controllers incorporating thermal cutouts, thermal relays or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motor with which they are intended to be used.

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings, and at ten times motor full load running current for d-c horsepower ratings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Auxiliary Devices Relating to Hazardous Locations (NRDZ)

USE

This category covers devices intended for use in control circuits of magnetic motor controllers and the like.

PRODUCT IDENTITY

The following product identity appears on the product:
Ind. Cont. Eq. Relating to Haz. Loc.

Industrial Control Equipment Relating to Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

Electronic, thermal and magnetic overload relays in this category are investigated to ANSI/UL 508, or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear – Part 1: General Rules," and ANSI/UL 60947-4-1A, "Low-Voltage Switchgear and Controlgear – Part 4-1A: Contactors and Motor-Starters – Electromechanical Contactors and Motor-Starters."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Note: The standard edition and any revision date, if applicable, of the basic unclassified locations standard(s) used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment Relating to Hazardous Locations" (or "Ind. Cont. Eq. Relating to Haz. Loc.").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL EQUIPMENT RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (NRFA)

INDUSTRIAL CONTROL EQUIPMENT RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (NRFA)

INDUSTRIAL CONTROL PANELS RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (NRFG)

GENERAL

This category covers industrial control panels relating to zone classified hazardous locations, which are factory-wired assemblies of industrial control equipment such as motor controllers, switches, relays and auxiliary devices. The panels may include disconnect means and motor branch-circuit-protective devices.

Industrial control panels relating to zone classified hazardous locations are intended for installation in unclassified locations. They are provided with intrinsically safe (low energy) circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

For intrinsically safe circuits, the energy level available in the hazardous location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated equipment be installed and interconnected in accordance with the instructions provided. The intrinsically safe circuit wiring must be routed in a separate raceway or otherwise reliably segregated from all power and other circuit wiring to preclude excessive currents and voltages from being impressed on the intrinsically safe circuit, rendering it nonintrinsically safe.

The investigation of industrial control panels relating to zone classified hazardous locations does not include investigation of the function of the controlled equipment.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Enclosed Industrial Control Panel Relating to Zone Classified Hazardous Locations with Intrinsically Safe Circuit Extensions

Industrial Control Panel Relating to Zone Classified Hazardous Locations with Intrinsically Safe Circuit Extensions

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

RELATED PRODUCTS

Industrial control panels for general use and for metal-working-machine tools for use in unclassified locations are covered under Industrial Control Panels (NITW).

Equipment that has been investigated for use only in the classified locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 508A, "Industrial Control Panels."

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 698A, "Industrial Control Panels Relating to Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Panel Relating to Zone Classified Hazardous Locations with Intrinsically Safe Circuit Extensions" or "Enclosed Industrial Control Panel Relating to Zone Classified Hazardous Locations with Intrinsically Safe Circuit Extensions." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRODUCT CATEGORIES BY CATEGORY CODE

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWEX)

The Listing covers the following products:

- Control Panels and Assemblies
- Motor Controllers
- Programmable Controllers

Enclosed industrial control equipment is intended for use as indicated in the general guide information at the front of Part II of this directory.

Industrial Control Equipment is for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Industrial Control Equipment, for which accessory kits are available for the field or distributor modification of the basic product or which may be assembled in many forms from separate components are marked to indicate the suitable accessories or separate components which may be used.

If the rating of the operating coil circuit of a magnetically operated industrial control device exceeds 125 volt-amperes, the coil circuit rating is marked on the device.

Overload relays or industrial control equipment incorporating overload relays are identified as to their maximum tripping time at 600 per cent of the overload relay current element trip rating. The designations "Class 10, Class 20 and Class 30" are used to identify the maximum tripping times, with the Class number indicating the maximum tripping time in seconds. Overload relays with maximum tripping times of 10 or 30 seconds are marked Class 10 or Class 30 respectively. Overload relays with a maximum tripping time of 20 seconds may be marked Class 20. Overload relays with tripping times in excess of 30 seconds are marked with their maximum tripping times. All unmarked overload relays have a maximum tripping time of 20 seconds.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL PANELS AND ASSEMBLIES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWFA)

USE AND INSTALLATION

This category covers control panels and assemblies consisting of enclosures and electrical components such as push button stations, pilot lights, motor controllers, and receptacles with plugs.

A single enclosure or a group of interconnected (modular) enclosures may be used for mounting the electrical components.

The enclosures making up a modular assembly are intended to be interconnected either at the factory or in the field by the user. Limitations on the interconnection of the enclosures are given on or with the product. Modular assemblies must be installed in accordance with the installation instructions provided with each part.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

It is intended that wiring between the electrical components of modular assemblies be field installed.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other certified ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for AC horsepower ratings and at 10 times motor full load running current for DC horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

Receptacles with plugs included on certified assemblies have been subjected to endurance and overload operation tests in the presence of the specific flammable atmospheres for Class I locations.

The plugs of the receptacle-plug combinations are for use with extra hard usage flexible cord with grounding conductor.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and main-

Control Panels and Assemblies for Use in Zone Classified Hazardous Locations (NWFA)—Continued

tained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which those assemblies having receptacles with plugs will be permitted for use. It is recognized that portable equipment should be used only where necessary.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Control Assembly Body for Use in Hazardous Locations
 - Control Assembly Cover for Use in Hazardous Locations
 - Control Panel for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are indicated in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Panel for Use in Hazardous Locations," "Control Assembly Cover for Use in Hazardous Locations" or "Control Assembly Body for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENCLOSED SLIP RINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWFC)

USE AND INSTALLATION

This category covers enclosed slip rings intended to transfer power to industrial equipment.

A terminal compartment is provided for connection to threaded rigid conduit systems.

PRODUCT IDENTITY

- The following product identity appears on the product:
 - Enclosed Slip Ring for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Zone Classified Hazardous Locations (NWEX) and Equipment for Use in and Relating to Class I, Zone 0, 1 and 2 Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, Zone 0, 1 and 2 Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Slip Ring for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE
CLASSIFIED HAZARDOUS LOCATIONS (NWEX)**
**Enclosed Slip Rings for Use in Zone Classified Hazardous
Locations (NWFC)—Continued**

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTOR CONTROLLERS FOR USE IN ZONE
CLASSIFIED HAZARDOUS LOCATIONS
(NWFE)**

Motor controllers are Listed under the following categories:

Auxiliary Devices
Combination Motor Controllers
Float-and Pressure-Operated Motor Controllers
Magnetic Motor Controllers
Manual Motor Controllers
Miscellaneous Motor Controllers

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings and at ten times motor full load running current for d-c horsepower ratings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Auxiliary Devices for Use in Zone Classified
Hazardous Locations (NWFN)**
GENERAL

This category covers devices such as machine-operated switches, push-button stations (including parts, such as pilot lights, meters, terminal blocks and selector switches), magnetically operated switches, and miscellaneous manually operated switches intended for use in control circuits of magnetic motor controllers, and the like.

Pilot lights without guards should be used only where not subject to breakage.

Auxiliary devices provided with a factory seal of conductors entering the pilot light or switch enclosure are so identified by a marking on the product.

Enclosures furnished without mechanisms are marked to identify the mechanisms intended to be used.

REBUILT PRODUCTS

This category also covers auxiliary devices that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt auxiliary devices are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt auxiliary devices are subject to the same requirements as new auxiliary devices.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Industrial Control Equipment Enclosure for Hazardous Locations
Industrial Control Equipment Enclosure for Use in Hazardous Locations

Industrial Control Equipment for Hazardous Locations
Industrial Control Equipment for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

For rebuilt products, the word "Rebuilt" or "Reconditioned" precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

Electronic, thermal and magnetic overload relays in this category are investigated to ANSI/UL 508, or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear – Part 1: General Rules," and ANSI/UL 60947-4-1A, "Low-Voltage Switchgear and Controlgear – Part 4-1A: Contactors and Motor-Starters – Electromechanical Contactors and Motor-Starters."

337

**Auxiliary Devices for Use in Zone Classified Hazardous
Locations (NWFN)—Continued**

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

Note: The standard edition and any revision date, if applicable, of the basic unclassified locations standard(s) used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Industrial Control Equipment (or Ind. Cont. Eq.) for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) for Use in Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Combination Motor Controllers for Use in Zone
Classified Hazardous Locations (NWFP)**
GENERAL

This category covers combination motor controllers.

Combination motor controllers provide the motor branch-circuit functions of motor controller, disconnect means, short-circuit and ground-fault protection and overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

Combination motor controllers are marked "Combination Motor Controller" to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the certification of the controller.

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

Enclosures furnished without mechanisms are marked to identify the mechanisms that should be used.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Industrial Control Equipment Enclosure for Hazardous Locations
Industrial Control Equipment Enclosure for Use in Hazardous Locations

Industrial Control Equipment for Hazardous Locations

Industrial Control Equipment for Use in Hazardous Locations

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWXE)

Combination Motor Controllers for Use in Zone Classified Hazardous Locations (NWFP)—Continued

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Industrial Control Equipment (or Ind. Cont. Eq.) for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) for Use in Hazardous Locations" or "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Magnetic Motor Controllers for Use in Zone Classified Hazardous Locations (NWFR)

USE

This category covers magnetic across-the-line starters. The safety of operation of oil-immersed-type starters will be endangered should the oil level be below the minimum shown by indicator. These devices should be installed with a certified sealing fitting adjacent to each opening where threaded rigid conduit is connected.

Enclosures furnished without mechanisms are marked to identify the mechanisms that should be used.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Industrial Control Equipment Enclosure for Hazardous Locations
 Industrial Control Equipment Enclosure for Use in Hazardous Locations
 Industrial Control Equipment for Hazardous Locations
 Industrial Control Equipment for Use in Hazardous Locations
 The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."
 Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Magnetic switches for controlling other than motor loads are covered under Auxiliary Devices for Use in Zone Classified Hazardous Locations (NWFN).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Zone Classified Hazardous Locations (NWFN), Industrial Control Equipment for Use in Zone Classified Hazardous Locations (NWXE) and Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear - Part 1: General Rules," and ANSI/UL 60947-4-1A, "Low-Voltage Switchgear and Controlgear - Part 4-1A: Contactors and Motor-Starters - Electromechanical Contactors and Motor-Starters."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

Note: The standard edition and any revision date, if applicable, of the basic unclassified locations standard(s) used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.

POWER CIRCUIT AND MOTOR-MOUNTED APPARATUS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWGA)

GENERAL

This category covers autotransformers, including motor-starting and variable-voltage types; battery chargers for industrial use; magnetically operated brakes; busbars; magnetically operated clutches; enclosed slip rings; lamp dimmers, including incandescent, fluorescent, mercury vapor, surgical light and theater use; phase converters; power factor correction equipment; power supplies for industrial use; reactors, including line chokes; and resistors, including motor-starting, rheostats, potentiometers, and high-impedance grounding types.

PRODUCT IDENTITY

The following product identity appears on the product:
 Ind. Cont. Eq. for Use in Hazardous Locations
 Industrial Control Equipment for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Zone Classified Hazardous Locations (NWXE) and Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWX)

PROGRAMMABLE CONTROLLERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWGD)

USE AND INSTALLATION

This category covers programmable industrial control systems utilizing a programmable memory for internal storage of user oriented instructions for specific functions such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also includes power supplies, central processing units, input and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas-, gas-oil-, or oil-fired appliances.

RECONDITIONED PRODUCTS

This category also covers programmable controllers and their accessories that have been reconditioned. Reconditioned programmable controllers and their accessories are factory reconditioned to the extent necessary by disassembly and reassembly using new or reconditioned component parts. The reconditioned programmable controllers and their accessories are subject to the same requirements as new programmable controllers and their accessories.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Industrial Control Equipment for Hazardous Locations
- Industrial Control Equipment for Use in Hazardous Locations

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

Other product identities may be used as shown in the individual certifications.

For reconditioned products, the word "Reconditioned," "Rebuilt," "Remanufactured" or "Refurbished" precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Zone Classified Hazardous Locations (NWX) and Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements," and ANSI/UL 61010-2-201, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-201: Particular Requirements for Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

Note: The standard edition and any revision date, if applicable, of the basic unclassified locations standard(s) used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.

UL MARK

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWX)

Programmable Controllers for Use in Zone Classified Hazardous Locations (NWGD)—Continued

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Use in Hazardous Locations" (or "Ind. Cont. Eq. for Use in Haz. Loc.") or "Industrial Control Equipment for Hazardous Locations" (or "Ind. Cont. Eq. for Haz. Loc.") or other appropriate product name as shown in the individual Listings.

For reconditioned products the product name is preceded by the word "Reconditioned," "Rebuilt," "Remanufactured" or "Refurbished."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INFORMATION TECHNOLOGY EQUIPMENT INCLUDING ELECTRICAL BUSINESS EQUIPMENT (NWGQ)

USE

This category covers equipment, appliances and systems rated 600 V or less normally found in offices and other business establishments, residences (homes), educational facilities, and other similar environments classified as ordinary locations.

This equipment has been investigated for installation in information technology equipment (computer) rooms as defined in ANSI/NFPA 75, "Fire Protection of Information Technology Equipment," and Article 645 of ANSI/NFPA 70, "National Electrical Code" (NEC), unless the equipment is otherwise identified by a marking or instruction.

EQUIPMENT TYPES

Equipment may be electronic or electromechanical in design or a combination thereof.

Various groupings of equipment are covered under this category, such as:

- Displays:** Flat-panel displays, LCD displays, monitors, plasma displays.
- Information processing equipment:** Central processing units (CPUs), hand-held computers (personal assistants), laptop computers, notebook computers, pen-based computers, personal computers, point-of-sale terminals, scanners (including portable barcode scanners), servers, work stations.
- Accessories:** Docking stations, flash memory cards, keyboards, mouse, PCMCIA-memory-modem cards, port replicators, trackballs.
- Information storage equipment:** Automated information storage equipment, CD-ROM/RW drives, disk drives, DVD drives, tape drives, optical drives.

Telecommunication equipment: Cellular site equipment, cordless telephone sets, facsimile machines, ISDN systems and telephones, modems, key telephone systems, powerline communication equipment, private automated branch exchanges (PABXs), telephone answering machines, telephone sets, voicemail systems, IP telephones, IP systems, wireless telephony systems.

Office appliances: Adding machines, bursters, calculators, collators, dictation and transcribing machines, electric typewriters, erasers, folding, embossing and sealing machines, label printers, microfilm readers, motor-operated file cabinets, overhead projectors, paper cutters, paper shredders, pencil sharpeners, sorters, stackers, staplers.

Printers/Reproduction equipment: Copiers, duplicating machines, microfilm printers, mimeograph machines, plotters, printers.

Mailing, banking and currency-handling equipment: Cash registers, coin counters, feeders and dispensers, accounting machines, check-writing-, -assigning, -dating, -inserting, -mailing, -numbering and -stamping machines, point-of-sale terminals.

Multimedia equipment/accessories: Cable modems, digital cameras, DLP projectors, LCD projectors, microphones, set-top boxes, speakers, video conferencing systems.

PRODUCT CATEGORIES BY CATEGORY CODE

**340 INFORMATION TECHNOLOGY EQUIPMENT INCLUDING
ELECTRICAL BUSINESS EQUIPMENT (NWGQ)**

Network equipment: Baluns, bridges, fiber optic transceivers, hubs, nodes, Power over Ethernet (PoE) equipment (e.g., power source equipment [PSE] and powered devices [PD]), repeaters, routers, switches, transceivers.

Wireless (RF, infrared) transceiving equipment: RF modems, hand-held computers with integral transceivers.

Static-neutralizing equipment: Power units with discharge bars used with or within copiers, collators, film-plate processors, digital printers, duplicating machines and similar equipment.

Interconnecting cable assemblies: Cable assemblies intended for use beneath raised floors of computer rooms. These assemblies are also covered under Computer Interconnection Cable Assemblies (DVPJ).

Included within the above groupings is equipment which is battery powered, either by standard-size consumer-replaceable batteries (e.g., AA, C, D), or nonstandard sizes specified by manufacturer, type and ratings.

This category also covers power distribution units (PDUs) and computer power centers investigated as part of a computer system for use exclusively in information technology equipment (computer) rooms in accordance with Article 645 of the NEC. This equipment is connected to branch circuits unless otherwise indicated in the manufacturer's installation instructions, and it distributes power to other units in the computer system by means of interconnecting cable assemblies complying with one or more of the wiring methods outlined in Article 645 of the NEC. Many of these units require special installation, such as a separate transformer, special grounding methods, motor-generator equipment, air conditioning, etc. Such features are covered in the manufacturer's installation instructions.

INSTALLATION

Some equipment has been investigated for installation in a restricted access location, such as a dedicated equipment room or telecommunication equipment closet, where access is limited to trained service personnel. Such equipment is provided with a marking or installation instructions that state "To be installed only in a Restricted Access Location," or similar wording. If also intended for installation over a concrete or noncombustible surface, such equipment will also be marked "Suitable for mounting on concrete or other noncombustible surface only," or similar wording.

Equipment installed in a restricted access location generally receives power from a centralized d.c. power source. If field wiring terminals are not contained in an internal compartment, both protection of exposed wiring terminals and wiring methods used for such equipment are intended to be provided in accordance with (1) markings on or instructions with the equipment, and (2) the provisions of Sections 110.26 and 110.27 of the NEC.

Products such as LAN transceivers and baluns investigated for use in air-handling spaces are marked "Suitable for Use in Other Environmental Air Space in Accordance with Section 300.22, (C) of the National Electrical Code" or "Suitable for Use in Air Handling Spaces." These products have been additionally investigated to UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and their Accessories Installed in Air-Handling Spaces." Products that bear the marking are suitable for installation in accordance with Section 300 of the NEC, Chapter 4 of ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," Section 602 of the "International Mechanical Code," and Section 602 of the "Uniform Mechanical Code."

When certified equipment intended for use with a detachable power-supply cord is not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit should be separately provided.

Equipment intended to be installed in closed and multiunit standard racks and cabinets has been determined to be suitable for use in ambient temperatures not exceeding the manufacturer's recommended ambient temperature as specified in the equipment's installation instructions.

Equipment identified with an Enclosure Type designation, or as "Rain-tight" or "Rainproof," is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

ACCESSORIES

Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either a specific or generic certified equipment specified in the markings or instructions.

OUTPUT CONNECTORS/CIRCUITS

Class 2 circuits are marked "Class 2." All other output circuits, including those associated with the Universal Serial Bus (USB), IEEE 1394 bus and PS/2 connectors are limited-power circuits supplied by ANSI/UL 60950-1 limited-power sources, unless:

- the circuits are clearly telecommunication circuits (e.g., RJ series modular jack, 50-pin commercial connectors with insulation-piercing terminals). These circuits are limited to telecommunication network voltages (TNV) and are suitable for connection to the telecommunication network and distribution wiring in accordance with Article 800 of the NEC; or
- the circuits are marked, or otherwise identified in the installation instructions with the type of circuit (e.g., Class 1), intended cable type (e.g., DP-2) or specific equipment intended to be interconnected (e.g., mfr/model printer).

**INFORMATION TECHNOLOGY EQUIPMENT INCLUDING
ELECTRICAL BUSINESS EQUIPMENT (NWGQ)**

Limited-power circuits of certified ITE supplied by limited-power sources are recognized by Section 725.41(A)(4) of the NEC as being equivalent to Class 2 circuits for purposes of applying Article 725 Class 2 wiring requirements.

SPECIAL CONSIDERATIONS

The ability or reliability of these products to perform their intended function in a particular application has not been investigated.

Equipment investigated with respect to security or burglary resistance is covered under Access Control System Units (ALVY), Antitheft Alarms and Devices (ATJT) and other associated categories. Card readers, badge readers and similar identification equipment covered under this category has not been investigated with respect to security.

The burglary and theft protection features of coin-operated equipment, banking and currency-handling equipment, cash registers, coin counters and the like have not been investigated.

Automated teller machines (ATMs) investigated for security and burglary resistance are covered under Automated Teller Systems (TPEU). ATMs that have not been investigated for security protection are covered under Bank Equipment (BALI).

Equipment intended for use on commercial transport aircraft and passenger areas of commercial cargo aircraft, as specified in the individual certifications, are investigated within the scope of the standard(s) noted under **REQUIREMENTS** below. The investigation addresses use in unclassified locations as well as on aircraft, and specifically takes into account appropriate operating parameters and installation considerations including, as applicable, (a) electrical clearances based on a cabin pressurization of approximately 8000 ft (2400 m), (b) aircraft cabin temperature per the manufacturer's specification, (c) interface with the aircraft electrical infrastructure using a method that the aircraft has been designed to accommodate (such as by common electrical attachment plug and outlet configurations, special-purpose mated connections, standard communication and data ports), and (d) the equipment either being such size as to be covered under the existing airline regulations for stowage of portable electronic devices (such as laptops) during takeoff and landing, or having provision for stowage by airline personnel during takeoff and landing so as to not introduce a risk of injury due to kinetic energy (such as service-cart-mounted devices). The investigation does not take into account governmental regulations for airworthiness and therefore Authorities Having Jurisdiction should be consulted for the use on aircraft.

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated.

For equipment establishing a virtual environment (virtual reality) as a function, the physiological effects of cyber sickness, motion sickness and similar side effects have not been investigated. Use of the equipment, including related precautions, if any, is intended to be in accordance with the manufacturer's instructions.

CATEGORY IDENTIFIER

One of the following category identifiers appears on the product:

60950-1
60950-21
60950-22
60950-23
ANSI/UL 60950-1
ANSI/UL 60950-21
ANSI/UL 60950-22
ANSI/UL 60950-23
Copier
Cordless Telephone
Info. Tech. Equip.
Information Technology Equipment
I.T.E.
ITE
Modem
NWGQ
Paper Shredder
Personal Computer
UL 1950
UL 60950
UL 60950-1

Other category identifiers may be used as shown in the individual certifications.

The category identifier for field-installed accessories includes the word "Accessory."

RELATED EQUIPMENT

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment (QPQY). Uninterruptible power-supply (UPS) equipment intended for indoor and outdoor use that may be stationary or fixed is covered under Uninterruptible Power-supply Equipment (YEDU).

Automatic transfer switches intended for use in optional standby systems in accordance with Article 702 of the NEC are covered under Automatic Transfer Switches for use in Optional Standby Systems (WPXT).

Power supplies for information technology and telecommunication equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ) and Power Supplies, Telephone (QQJE).

Secondary (rechargeable) battery packs for use in transportable equipment are covered under Batteries, Household and Commercial (BBFS).

Static neutralizing equipment is covered under Static Neutralizing Equipment (VWWZ). High-voltage parts that may be accessible after installation have been investigated as limited-current circuits.

Air conditioning equipment for use in computer rooms or other areas in which information technology equipment is installed is covered under Air Conditioners, Special Purpose (ACVS) and Heating and Cooling Equipment (LZFE).

Fire-resistant materials, sprinklers, extinguishers and associated equipment intended for use in computer rooms is covered under Carbon Dioxide Extinguishers (FXHV) and Halogenated Agent Extinguishing System Units (GLER).

Filing cabinets covered under this category have not been investigated with respect to fire resistance or security. Fire-resistant filing cabinets are covered under Record Protection Equipment (RYPH).

Smoke detectors are covered under Smoke-automatic Fire Detectors (UROX); alarm equipment is covered under Single- and Multiple-station Smoke Alarms (UTGT).

Other equipment associated with information technology/processing but not intended for use in offices, residences or computer rooms is covered under Graphics Arts Equipment (KCQT), Inspection and Measuring Electrical Equipment (NYOK), Teaching and Instruction Equipment (WYFW), Laboratory Use Electrical Equipment (OGTK), Medical Equipment (PIDF), Marking and Coding Equipment, Electronic (PGBE) and Photographic Equipment (QINT). Other multimedia equipment and accessories are covered under Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZU). Other telecommunication appliances and equipment is covered under Telephone Appliances and Equipment (WYQQ).

Modular assemblies of telecommunication equipment (e.g., racks, circuit card assemblies) designed for field installation by trained service personnel are covered under Custom-built Telecommunication Equipment (WYKM).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communication companies, is covered under Communication Service Equipment (DUZO).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunication equipment, but include components and assemblies that are intended to power, protect, heat, cool of otherwise support IT or telecommunication equipment that will be installed at a later time are covered under Information Technology and Telecommunication Equipment Cabinets, Enclosures and Racks (NWIN).

Power distribution products intended for indoor use as relocatable multiple-outlet extensions of a single branch circuit not for exclusive use of ITE and consisting of an attachment plug and a single length of flexible cord terminated in a single enclosure in which one or more receptacles are mounted are covered under Relocatable Power Taps (XBYS).

Power distribution products intended for installation in modular furniture are covered under Furniture Power Distribution Units (IYNO).

Equipment intended to protect against mains transients is covered under Surge-protective Devices (VZCA).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements," in conjunction with ANSI/UL 60950-21, "Information Technology Equipment – Safety – Part 21: Remote Power Feeding," ANSI/UL 60950-22, "Information Technology Equipment – Safety – Part 22: Equipment to be Installed Outdoors," and/or ANSI/UL 60950-23, "Information Technology Equipment – Safety – Part 23: Large Data Storage Equipment."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number or file number, and one of the following category identifiers: "UL 1950," "UL 60950," "UL 60950-1," "Information Technology Equipment" (or "Info. Tech. Equip.," "I.T.E." or "ITE"), "NWGQ," or the standard number with or without the "ANSI/UL" prefix (e.g., "ANSI/UL 60950-1," "60950-1"). The Listing Mark may also include one of the following product names: "Copier," "Modem," "Paper Shredder," "Personal Computer," "Cordless Telephone," or other appropriate product name as shown in the individual Listings.

The category identifier for field-installed accessories includes the word "Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INFORMATION TECHNOLOGY EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWHC)

GENERAL

This category covers information technology equipment for use in hazardous (classified) locations such as, but not limited to, personal computers, card readers and printers, rated 600 V or less, normally used in business establishments and other similar environments.

REBUILT PRODUCTS

This category also covers information technology equipment that is rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt information technology equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt information technology equipment is subject to the same requirements as new information technology equipment, including production-line tests as applicable.

The equipment and appliances may be electromechanical and/or electronic.

SPECIAL CONSIDERATIONS

Card readers, badge readers and similar identification equipment covered under this category has not been investigated with respect to security or burglary resistance.

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated.

For equipment establishing a virtual environment (virtual reality) as a function, the physiological effects of cyber sickness, motion sickness and similar side effects have not been investigated. Use of the equipment, including related precautions, if any, is intended to be in accordance with the manufacturer's instructions.

PRODUCT IDENTITY

The following product identity appears on the product:

Info. Tech. Equip. for Use in Hazardous Locations
Information Technology Equipment for Use in Hazardous Locations
Information Technology Equipment for Hazardous Locations
I.T.E. for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

The words "Information Technology Equipment" may be abbreviated "Info. Tech. Equip." or "I.T.E."

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product identity.

RELATED EQUIPMENT

Graphic display and touch panel equipment for information technology and telecommunications equipment is covered under Programmable Controllers for Use in Zone Classified Hazardous Locations (NWGD).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

**342 INFORMATION TECHNOLOGY EQUIPMENT FOR USE IN
ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWHC)**

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

The ability or reliability of these products to perform their intended function in a particular application has not been investigated.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Information Technology Equipment for Use in Hazardous Locations" (or "I.T.E. for Use in Hazardous Locations" or "Info. Tech. Equip. for Use in Hazardous Locations") or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INFORMATION TECHNOLOGY
EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (NWHP)**

GENERAL

This category covers information technology equipment such as, but not limited to, personal computers, card readers and printers, rated 600 V or less, normally used in business establishments and other similar environments.

The equipment and appliances may be electromechanical and/or electronic.

REBUILT PRODUCTS

This category also covers information technology equipment that is rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt information technology equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt information technology equipment is subject to the same requirements as new information technology equipment, including production-line tests as applicable.

SPECIAL CONSIDERATIONS

Card readers, badge readers and similar identification equipment covered under this category have not been investigated with respect to security.

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated.

For equipment establishing a virtual environment (virtual reality) as a function, the physiological effects of cyber sickness, motion sickness and similar side effects have not been investigated. Use of the equipment, including related precautions, if any, is intended to be in accordance with the manufacturer's instructions.

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Information Technology Equipment for Hazardous Locations" (or "Info. Tech. Equip. for Hazardous Locations," "Info. Tech. Equip. for Haz. Loc.," "I.T.E. for Hazardous Locations" or "I.T.E. for Haz. Loc.") or "Information Technology Equipment for Use in Hazardous Locations" (or "Info. Tech. Equip. for Use in Hazardous Locations," "Info. Tech. Equip. for Use in Haz. Loc.," "I.T.E. for Use in Hazardous Locations" or "I.T.E. for Use in Haz. Loc."), or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Reconditioned" or "Refurbished" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**AUDIO/VIDEO, INFORMATION AND
COMMUNICATION TECHNOLOGY
EQUIPMENT CABINET, ENCLOSURE
AND RACK SYSTEMS (NWIN)**

GENERAL

This category covers cabinet, enclosure and rack/frame systems that are not complete but include components and assemblies that are intended to power, protect, heat, cool, or otherwise support information technology (IT) or telecommunications equipment, audio/video equipment (A/V), or the like that will be installed at a later time. They usually include mounting hardware, shelves or space for the installation of additional electronic equipment. These cabinet, enclosure and rack/frame systems are intended to be used by manufacturers in the construction of complete IT and communications equipment, or by service providers for the installation of network infrastructure equipment.

Equipment identified in the individual certifications as an enclosure is constructed to provide a degree of protection to personnel against accidental contact with equipment, parts involving a risk of personal injury or energized parts. It is also constructed to minimize the spread of fire or flames from within and to provide a degree of protection to the enclosed equipment against physical damage or specified environmental conditions.

Equipment identified in the individual certifications as an equipment cabinet is a closed storage system with a surrounding case or housing that does not provide the degrees of protection of an enclosure. An equipment cabinet is used to store or mount equipment that is provided with its own enclosure or may be used in place of an equipment enclosure if in a restricted-access location that is limited to access by service personnel only. Equipment cabinets are intended for indoor installation only.

Equipment identified in the individual certifications as an equipment frame or equipment rack is an open-frame mounting system, usually either in a two-post or four-post frame design that does not provide the degrees of protection of an enclosure. A frame or rack is used to store or mount equipment that is provided with its own enclosure or is intended for use only in restricted-access locations limited to service personnel only. Frames and

**AUDIO/VIDEO, INFORMATION AND COMMUNICATION
TECHNOLOGY EQUIPMENT CABINET, ENCLOSURE AND
RACK SYSTEMS (NWIN)**

racks are intended for indoor installations only or in outdoor environments when additionally installed in a suitably rated enclosure.

A marking includes a configuration list, or diagram of the components, and assemblies provided with the product covered under the system category. It is the responsibility of the Authority Having Jurisdiction over the final installation to determine if the final configuration meets the necessary criteria for installation and use.

As appropriate, this equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and/or the applicable sections of ANSI C2, "National Electrical Safety Code." Equipment intended for installation in information technology equipment (computer) rooms is intended to be installed in accordance with ANSI/NFPA 75, "Fire Protection of Information Technology Equipment."

Equipment covered under this category includes, but is not limited to, indoor and outdoor cabinets and enclosures, racks, frames (nonenvironmentally controlled cabinets, pedestals, enclosures, etc.), and the like. For the purpose of identification in this Guide Information, all of the equipment (cabinets, racks and enclosures) covered under this category is referred to as "ITC equipment cabinets."

Equipment intended for outdoor use is marked with an Enclosure Type rating, or as "Raintight" or "Rainproof," and provides a degree of protection as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). The absence of a Type rating will presume no environmental conditions have been assessed, and will automatically designate the equipment with a "Type 0" rating. Cabinets and enclosures may incorporate multiple Type designations for differing compartments if marked on the equipment. In addition, equipment may optionally be investigated and marked for ingress protection in accordance with IEC 60529, "Degrees of Protection Provided by Enclosures (IP Code)." IP codes are not intended to replace Type ratings.

Except for equipment identified with a specific temperature range, outdoor equipment has been investigated over a temperature range of -33°C to +40°C. The effects of insolation (solar loading) have also been considered.

For equipment containing certified primary protectors for telecommunications circuits (see QVGV), the individual certification information for the protectors should be consulted for information regarding the installation and use of the protectors.

INSTALLATION

Some ITC equipment cabinet, enclosure, and rack/frame systems have been investigated for installation in a restricted access location, such as a dedicated equipment room or telecommunications equipment closet, where access is limited to trained service personnel. Such ITC equipment is provided with a marking or installation instructions which state "To be installed only in a Restricted Access Location," or similar wording. If also intended for installation over a concrete or noncombustible surface, such equipment is also marked "Suitable for mounting on concrete or other noncombustible surface only," or similar wording.

Equipment installed in a restricted access location generally receives power from a centralized dc power source. If field-wiring terminals are not contained in an internal compartment, both protection of exposed wiring terminals and wiring methods used for such equipment are intended to be provided in accordance with (1) markings on or instructions with the equipment, and (2) the provisions of Sections 110.26 and 110.27 of the NEC.

All wiring is intended to conform to the NEC. Wiring in an IT equipment (computer) room is intended to conform to Article 645 of the NEC.

ACCESSORIES

Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with certified equipment as specified in the markings or instructions.

PRODUCT MARKINGS

The product marking includes a configuration list or diagram of components and accessories when included with the product.

Equipment containing service equipment is marked with the service panel input and output ratings. Short-circuit capacity may additionally be investigated and marked.

Equipment containing air conditioning or heat exchangers is marked with the BTU rating for the heat it can eliminate from the equipment interior. This rating is based solely on the manufacturer's specifications and has not been investigated or verified by UL. In addition, the heat-release data for any installed equipment that is part of the cabinet system is also included. The heat release from power supplies is specified for the power supply operating under full load (basically the inefficiency of the power conversion process) but the heat release from powered equipment not included as part of the cabinet system is not included.

Equipment containing ac or dc power supplies or distribution is marked with an appropriate electrical rating for the power it can provide to installed units.

Products investigated for use in other spaces used for environmental air (spaces not specifically fabricated for environmental air-handling purposes but used for air-handling purposes, such as a plenum) are marked "Suit-

SYSTEMS (NWIN)**

343

able for Use in Other Space Used for Environmental Air (Plenums)," "Suitable for Use in Air-handling Spaces," or equivalent wording. When these products employ combustible outer enclosures they have been additionally investigated to UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces." Products that bear one of the aforementioned markings are suitable for installation in accordance with Article 300 of the NEC, Chapter 4 of ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," Section 602 of the "International Mechanical Code," and Section 602 of the "Uniform Mechanical Code." These enclosure systems are considered to have adequate fire-resistant and low-smoke-producing characteristics and limit the amount of smoke that can escape into the air-handling space.

FACTORS NOT INVESTIGATED

Other features that may affect the operation or performance of the installed equipment have not been investigated.

The suitability of an enclosure system, including any installed equipment, to connect to environmental air-distribution systems in buildings has not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

A/V Cabinet System
A/V Enclosure System
A/V Rack System
CATV Cabinet System
CATV Enclosure System
CATV Rack System
Communications Cabinet System
Communications Enclosure System
Communications Rack System
IT Cabinet System
IT Enclosure System
IT Rack System
ITC Cabinet System
ITC Enclosure System
ITC Rack System
Telecom Cabinet System
Telecom Enclosure System
Telecom Rack System
Telecommunications Cabinet System
Telecommunications Enclosure System
Telecommunications Rack System

Other product identities may be used as shown in the individual certifications, preceded by the word "Telecom," "Telecommunications," "Communications," "IT," "ITC," "A/V" or "CATV," and a specific application, such as "Cell System," "Wireless" or "Remote Terminal," or other applications as shown in the individual certifications (e.g., "Remote Terminal IT Enclosure System").

The product identity for field-installed accessories includes the word "Accessory."

RELATED PRODUCTS

Complete ITC equipment cabinets are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ), Telephone Appliances and Equipment (WYQQ), Communication Service Equipment (DUZO), Custom-built Telecommunications Equipment (WYKM), Communications-circuit Accessories (DUXR), Audio and Video Equipment (AZUJ), Audio and Radio Equipment, Commercial (AZCY), Commercial Audio and Radio Equipment, Systems and Accessories (AZJX), Commercial Phonographs, Tape-playing and Recording Appliances and Accessories (AZQW), Audio/Video Apparatus (AZSQ), Closed-circuit Television Equipment (DRQH), Television/Video Equipment for Use in Health Care Facilities (KFCV), Video and Audio Equipment, Professional (ZCBy), and similar categories that cover complete equipment.

Cabinets and enclosures that do not include any additional components or assemblies may also be covered under Industrial Control Panels (NITW) and investigated to ANSI/UL 50, "Enclosures for Electrical Equipment."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 2416, "Outline of Investigation for Audio/Video, Information and Communication Technology Equipment Cabinet, Enclosure and Rack Systems."

Outdoor Type ratings are investigated to ANSI/UL 50E, "Enclosures for Electrical Equipment, Environmental Considerations."

Alternative tests for "Raintight" and "Rainproof" designations are found in UL 2416.

Components, assemblies and subassemblies provided/installed as part of enclosure, cabinet or rack systems are investigated to the applicable UL requirements as appropriate for the component, assembly or subassembly. Some examples are:

AUDIO/VIDEO, INFORMATION AND COMMUNICATION TECHNOLOGY EQUIPMENT CABINET, ENCLOSURE AND RACK SYSTEMS (NWIN)

344

Protectors for paired-conductor communications circuits (see QVGV) are investigated to ANSI/UL 497, "Protectors for Paired Conductor Communications Circuits."
 Service equipment is investigated to UL 869A, "Reference Standard for Service Equipment."
 Special-purpose air conditioners (see ACVS) are investigated to ANSI/UL 484, "Room Air Conditioners."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number or file number, and one of the following product names: "Enclosure System," "Cabinet System," "Rack System," preceded by "Telecom," "Telecommunications," "Communications," "IT," "ITC," "A/V," "CATV," a specific application such as "Cell System," "Wireless" or "Remote Terminal," or other appropriate product name as shown in the individual Listings.

For field-installed accessories, the product name includes the word "Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSPECTION AND MEASURING ELECTRICAL EQUIPMENT (NYOK)

USE

This category covers equipment intended primarily for the purpose of identifying, examining and investigating materials, and making measurements and tests such as might be associated with manufacturing processes and quality control procedures.

These products have been investigated with respect to risk of fire, shock and injury to persons. The accuracy of measured, analyzed or prepared quantities has not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Inspection Equipment
- Measuring Equipment

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Inspection and measuring equipment for specialized use is covered under appropriate product categories such as Garage Equipment (JGVV) and Photographic Equipment (QINT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 61010A-1, "Electrical Equipment for Laboratory Use; Part 1: General Requirements," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inspection Equipment" or "Measuring Equipment," or the name of the specific type of product as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

INSPECTION AND MEASURING ELECTRICAL EQUIPMENT (NYOK)

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSPECTION AND MEASURING ELECTRICAL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NYPA)

USE

This category covers equipment intended primarily for the purpose of identifying, examining and investigating materials, and making measurements and tests such as might be associated with manufacturing processes and quality-control procedures.

The accuracy of the equipment has not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Inspection Equipment for Use in Hazardous Locations
- Measuring Equipment for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 3101-1, "Electrical and Measuring Test Equipment: Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inspection Equipment for Use in Hazardous Locations" or "Measuring Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSPECTION AND MEASURING ELECTRICAL EQUIPMENT, SPECIAL INSPECTION EQUIPMENT (NYQD)

GENERAL

This category covers portable, mobile, stationary, and fixed units or systems intended primarily for the purpose of identifying materials, examining and investigating materials, including x-ray scanning (luggage) units, and other equipment that uses special technologies to perform its function.

Equipment not covered under this category includes, but is not limited to, medical x-ray equipment (including x-ray equipment designed to operate on supply potentials of over 600 V), equipment incorporating unenclosed aerial conductors, separate devices, such as tables, timers, etc., that are not limited in design to x-ray applications, and equipment which is not necessary for successful operation of x-ray equipment. See Inspection and Measuring Electrical Equipment (NYOK) and Medical Equipment (PIDF).

This equipment has been Classified as to electrical fire, shock, and mechanical hazards only.

The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in ANSI/NFPA 70, "National Electrical Code."

The nature of some of this equipment is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such

features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and must, in all cases, be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

FACTORS NOT INVESTIGATED

These products generate radiation or contain radioactive materials or involve working with toxic materials, or other potentially harmful technologies, where data regarding levels of exposure and physiological effects are not investigated. The accuracy of measured, analyzed or prepared quantities has not been investigated.

X-radiation safety and performance requirements are regulated under Public Law 90-602 and are enforced by the U.S. Department of Health, Education and Welfare. Compliance with the applicable regulations under conditions of normal and abnormal operation has not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Special Inspection Equipment
- Special Measuring Equipment

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 61010A-1, "Electrical Equipment for Laboratory Use: Part 1: General Requirements," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO ELECTRICAL FIRE, SHOCK AND MECHANICAL HAZARDS ONLY

**Alternate UL Mark
UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]

WITH RESPECT TO ELECTRICAL FIRE, SHOCK AND MECHANICAL HAZARDS ONLY

Control No.

* **SPECIAL INSPECTION EQUIPMENT** or **SPECIAL MEASURING EQUIPMENT**, or the name of the specific type of product

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INSTRUMENTATION TRAY CABLE
(NYTT)**

GENERAL

This category covers Type ITC instrumentation tray cable for use only in industrial establishments in accordance with Article 727 of ANSI/NFPA 70, "National Electrical Code" (NEC). The cable consists of two or more insulated copper or thermocouple alloy conductors enclosed within a non-metallic jacket. The cable may have a metal sheath or armor over the non-metallic jacket, and may contain grounding conductors and/or optical fiber members.

The cable is rated 300 V and is intended for use on circuits rated 150 V or less and 5 A or less. The cable is certified in conductor sizes 22 to 12 AWG. Conductor sizes within a cable may be mixed.

Regarding cable seals outlined in Article 501 of the NEC, Type ITC cable has a sheath considered to be gas/vapor tight but the cable has not been investigated for inability to transmit gases through its core.

PRODUCT MARKINGS

The cable identification "TYPE ITC" and other markings are visible on the surface of the nonmetallic jacket.

Cable with thermocouple alloy conductors is intended for thermocouple extension use only and is so marked or has the marking "THCPL EXTN."

The temperature rating of the cable is 60°C unless otherwise marked on the cable.

Cable containing optical fiber members is identified with the suffix "OF." Cable investigated in accordance with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is marked with the suffix "-LS."

Cable investigated for direct burial in the earth is marked "DIRECT BURIAL" (or "DIR BUR").

Cable permitted to be used between cable trays and utilization equipment in accordance with Section 727.4(5) of the NEC is surface marked with the supplementary letters "-ER" (formerly marked "Open Wiring").

Cable marked "Wet" or "Wet Location" is suitable for use in wet locations.

Cable for use in hazardous (classified) locations, Class I, Division 1, Groups A, B, C and D, and Class I, Zone 1, Groups IIA, IIB and IIC in accordance with the NEC is marked "Type ITC-HL."

PRODUCT IDENTITY

The following product identity appears on the product:

Instrumentation Tray Cable, Type ITC

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2250, "Instrumentation Tray Cable."

The basic standard used to investigate cable marked "Type ITC-HL" in this category is ANSI/UL 2225, "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

See Cable for Use in Hazardous Locations (PJPP) for Certification Mark requirements for "Type ITC-HL."

The Certification Mark for this category requires the use of a holographic label.

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Instrumentation Tray Cable, Type ITC."

See Cable for Use in Hazardous Locations (PJPP) for Certification Mark requirements for "Type ITC-HL."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSULATING DEVICES AND MATERIALS (NYYV)

INSULATING BUSHINGS (NZMT)

USE

This category covers insulating bushings intended for the protection of wire, cable and flexible cord where it passes through walls or barriers of metal.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Bushing
- Insulated Bushing

RELATED PRODUCTS

Insulating bushings intended for use on the ends of conduit in boxes, gutters, etc. are covered under Conduit Fittings (DWTT).

Insulating bushings intended for use on the ends of rigid or flexible conduit, electrical metallic tubing, or armored cable, where a change to open wiring is made, are covered under Outlet Bushings and Fittings (QCRV).

ADDITIONAL INFORMATION

Insulating Bushings (NZMT)—Continued

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 635, "Insulating Bushings."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Bushings" or "Insulated Bushing."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSULATING TAPE (OANZ)

USE

This category covers rubber insulating tape for insulating joints and splices in electrical conductors where an outer covering of protective material, such as friction tape, is intended to be applied over the insulating tape.

This category also covers thermoplastic tape intended for use as the sole insulation and covering of joints and splices in electrical conductors.

This tape is suitable as electrical insulation at not more than 600 V and at temperatures not exceeding 80°C (176°F).

PRODUCT MARKINGS

The wrapper or carton containing a single roll of tape, or the central paper core on which the tape is wrapped, is marked with (1) the manufacturer's name or trademark, (2) the catalog or type number, and (3) the words "For use at not more than 600 V and at not more than 80°C (176°F)," or an equivalent statement.

Tape determined to be flame retardant is marked "Flame Retardant."

Tape determined to be suitable for exposure to sunlight is marked "Sunlight Resistant."

Tape determined to be suitable to insulate splices while subjected to temperatures down to -10°C is marked "Cold Resistant."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Elect. Insul. Tape
- Elec. Tape
- Electrical Insulating Tape
- Electrical Tape
- Insul. Tape
- Insulating Tape

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 510, "Polyvinyl Chloride, Polyethylene, and Rubber Insulating Tape."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Insulating Tape" (or "Insul. Tape"), "Electrical Tape" (or

Insulating Tape (OANZ)—Continued

"Elec. Tape") or "Electrical Insulating Tape" (or "Elect. Insul. Tape"), or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSULATING DEVICES AND MATERIALS, MISCELLANEOUS (OCDT)

GENERAL

This category covers miscellaneous insulating devices and materials, such as insulating caps, closures, covers and links.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Insulating Closure
- Insulating Cover
- Insulating Link

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 746A, "Polymeric Materials - Short Term Property Evaluations," ANSI/UL 746B, "Polymeric Materials - Long Term Property Evaluations," and ANSI/UL 746C, "Polymeric Materials - Use in Electrical Equipment Evaluations."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Insulating Link," "Insulating Cover" or "Insulating Closure," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INTERCOMMUNICATION SYSTEMS FOR USE IN HAZARDOUS LOCATIONS, MARINE (ODJV)

TELEPHONES FOR USE IN HAZARDOUS LOCATIONS, MARINE (OEPX)

GENERAL

This category covers telephone sets with a handset-type transmitter and receiver, and sound-powered telephone handsets for installation with circuit wiring, except cord assembly, using wiring materials specified by the Electrical Engineering Regulations of Subchapter J, Title 46, Code of Federal Regulations, Parts 110 to 113 inclusive. The sound-powered telephones are intrinsically safe and should not be installed with any other equipment or wiring that may impart dangerous currents to them.

These telephones are intended for use on ocean-going vessels and are designed to operate without causing ignition of surrounding flammable gas or vapor-air atmospheres covered by the Class I, Divisions 1 and 2 hazardous locations groups under which they are certified. Telephones certified for use in any of the groups under Class II, Divisions 1 and 2 hazardous locations have been tested for dust-tightness and safe operation in the presence of the specific combustible dusts.

Telephones for Use in Hazardous Locations, Marine (OEPX)—Continued

This category also covers telephones for use in Division 2 only of one or more of the hazardous locations groups. Such telephones are similar to those for Division 1 locations except that ordinary handsets are provided that do not have any switches or arcing parts. These telephones are marked with the words "Division 2 Only."

The handset and cord assembly should be carefully inspected and should be replaced if there is any evidence of damage or deterioration or corrosion.

Station equipment, power supply equipment, and protectors, when used with these telephones, should be located outside the hazardous area. Information with regard to telephone supply line protection is given in the individual certifications.

PRODUCT IDENTITY

The following product identity appears on the product:
Telephone for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Marine Products (AAMP) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "MARINE," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Marine Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL symbol with the word "MARINE" above the UL symbol (as illustrated in the Introduction of this Directory), the word "LISTED," a control number, and the product name "Telephone for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EQUIPMENT AND SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (OERX)

GENERAL

This category covers products and systems investigated for use in hazardous (classified) locations. Included are intrinsically safe products, intrinsically safe systems, associated apparatus with intrinsically safe circuit extensions, and other arrangements involving intrinsic safety as identified in the individual certifications, together with nonincendive types of protection.

This equipment has not been investigated for performance of its intended function.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
- Carbon Monoxide Detector for Use in Hazardous Locations
- Combustible-gas Detector for Use in Hazardous Locations
- Flashlight for Use in Hazardous Locations
- Headlight for Use in Hazardous Locations
- Ultrasonic Sensor for Use in Hazardous Locations

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Gas detectors investigated for their performance relative to their ability to detect gas are covered under Gas and Vapor Detection Equipment Listed for Use in Hazardous Locations (JTPX).

Equipment investigated for use only in the hazardous locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are ANSI/UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations," and ANSI/ISA-12.12.01, "Nonincendive Electrical Equipment for Use in Class I and II, Division 2 and Class III, Divisions 1 and 2 Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO INTRINSIC SAFETY ONLY

or

AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME] FOR USE IN HAZARDOUS LOCATIONS ONLY AS TO INTRINSIC SAFETY

Control No.

or

[PRODUCT NAME] FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY

Control No.

The words "HAZARDOUS LOCATIONS" may be abbreviated "HAZ. LOC."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ION GENERATORS (OETX)

GENERAL

This category covers portable air ionizers of the household and commercial types intended for emitting charged ions into the atmosphere. These appliances may or may not employ mechanical filters.

REBUILT PRODUCTS

This category also covers ion generators that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt ion generators are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt ion generators are subject to the same requirements as new ion generators.

FACTORS NOT INVESTIGATED

The physiological effects of the operation of these appliances, beneficial or otherwise, have not been investigated.

PRODUCT IDENTITY

The following product identity appears on the product:

Ion Generator

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Electrostatic air cleaners and fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners (AGGZ).

Air-filtering appliances utilizing mechanical filtration only or ultraviolet/germicidal lamps are covered under Air-filtering Appliances (AEDX).

Deodorizers intended to be used in treating air by dispersal of chemicals or by scenting the air are covered under Deodorizers and Air Fresheners (EOGX).

Appliances employing ultraviolet lamps or ionization tubes for the purpose of treating air and having provisions for connection to heating and ventilation ducts used for air distribution are covered under Accessories, Air Duct Mounted (ABQK).

PRODUCT CATEGORIES BY CATEGORY CODE

Power supplies intended for use in electrostatic air-cleaning equipment are covered under Power Supplies, Electrostatic Air-cleaning Equipment (QQCH2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 867, "Electrostatic Air Cleaners."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ion Generator," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INTRINSICALLY SAFE EQUIPMENT AND SYSTEMS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (OEVS)

GENERAL

This category covers products and systems investigated as to intrinsic safety only, as it pertains to use in hazardous (classified) locations. Included are intrinsically safe products, intrinsically safe systems, associated apparatus with intrinsically safe circuit extensions, and other arrangements involving intrinsic safety as identified in the individual certifications.

This equipment has not been investigated for performance of its intended function.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Carbon Monoxide Monitor for Use in Hazardous Locations
 - Multi-gas Monitor for Use in Hazardous Locations
 - Pressure Transducer for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are ANSI/UL 60079-0, "Electrical Apparatus for Explosive Gas Atmospheres – Part 0: General Requirements," and ANSI/UL 60079-11, "Electrical Apparatus for Explosive Gas Atmospheres – Part 11: Intrinsic Safety 'i'."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO INTRINSIC SAFETY ONLY

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY] FOR USE IN HAZARDOUS LOCATIONS ONLY AS TO INTRINSIC SAFETY

Control No.

INTRINSICALLY SAFE EQUIPMENT AND SYSTEMS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (OEVS)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

IRRIGATION CABLE (OFFY)

GENERAL

This category covers irrigation cable for use with electrically driven or controlled irrigation machines in accordance with Article 675 of ANSI/NFPA 70, "National Electrical Code."

Irrigation cable used to interconnect enclosures on the structure of an irrigation machine is an assembly of stranded, insulated conductors with non-hygroscopic fillers in a core of moisture and flame resistant, nonmetallic material overlaid with a metallic covering and jacketed with a moisture, corrosion and sunlight-resistant nonmetallic material. Irrigation cable is suitable for direct burial in the earth and may, optionally, be so marked.

This cable may consist of a composite of power, control and grounding conductors in sizes 18 AWG and larger, stranded copper, and is rated 75°C and 600 V.

PRODUCT IDENTITY

The following product identity appears on the product:
Irrigation Cable

RELATED PRODUCTS

Fittings for use with this cable are covered under Outlet Bushings and Fittings (QCRV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1263, "Outline of Investigation for Irrigation Cables."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Irrigation Cables."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (OGNA)

GENERAL

This category covers laboratory equipment and accessories designed for technological activities involving:

1. The measurement of physical or chemical properties of materials.
2. The measurement, control, and/or display of the functional performance of a piece of equipment.
3. Qualitative or quantitative constituent analysis of substances.
4. Preparation of materials for further analysis or measurements.

These products have been investigated with respect to risk of fire, shock, and injury to persons. The accuracy of measured, analyzed, or prepared quantities has not been investigated.

This category does not cover laboratory equipment intended for patient contact.

In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use, the necessary instructions are marked on the equipment or provided in the instructions.

REBUILT PRODUCTS

LABORATORY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (OGNA)

This category also covers laboratory equipment and accessories that are rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt laboratory equipment and accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment and accessories are subject to the same requirements as new laboratory equipment and accessories.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Laboratory Equipment for Use in Hazardous Locations
 Motor-operated Laboratory Equipment for Use in Hazardous Locations
 Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Other equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory for Use in Hazardous Locations (KGIZ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 61010A-1, "Electrical Equipment for Laboratory Use; Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor-operated Laboratory Equipment for Use in Hazardous Locations" or "Laboratory Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (OGNM)

GENERAL

This category covers laboratory equipment and accessories designed for technological activities involving:

1. The measurement of physical or chemical properties of materials.
2. The measurement, control, and/or display of the functional performance of a piece of equipment.
3. Qualitative or quantitative constituent analysis of substances.
4. Preparation of materials for further analysis or measurements.

These products have been investigated with respect to risk of fire, shock, and injury to persons. The accuracy of measured, analyzed, or prepared quantities has not been investigated.

This category does not cover laboratory equipment intended for patient contact.

In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use, the necessary instructions are marked on the equipment or provided in the instructions.

REBUILT PRODUCTS

This category also covers laboratory equipment and accessories that are rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt laboratory equip-

LABORATORY EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (OGNM)

ment and accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment and accessories are subject to the same requirements as new laboratory equipment and accessories.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Laboratory Equipment for Use in Hazardous Locations
 Motor-operated Laboratory Equipment for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 61010-1, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY HOODS AND CABINETS (OGOY)

USE AND INSTALLATION

This category covers laboratory hoods, biological safety cabinets and laminar flow cabinets certified as to fire, electrical and mechanical hazards only.

Laboratory hoods are intended to provide an enclosed countertop work area with exhaust for capture and removal of vapors, mists and particulate matter from the work area.

Biological safety cabinets are intended to provide an enclosed countertop work area for handling and containment of biological materials.

Laminar flow cabinets are ventilated, partially enclosed cabinets using laminar air flow and intended to provide "clean" air flow over the work surface.

Effectiveness and reliability of air flow for capture, containment and exhaust have not been investigated. Unless specifically marked on the equipment, suitability for use with perchloric acid, radiological materials, or the like has not been investigated.

Requirements for the installation of this equipment are included in ANSI/NFPA 45 (1982), "Fire Protection for Laboratories Using Chemicals."

PRODUCT MARKINGS

Laboratory hoods and cabinets are marked with (1) the manufacturer's name, trade name or trademark or other descriptive marking by which the organization responsible for the product may be identified, (2) a distinctive catalog or model number or the equivalent, (3) the electrical rating, and (4) the date or other dating period of manufacture not exceeding any three consecutive months.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Laboratory Cabinet
 Laboratory Hood

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1805, "Laboratory Hoods and Cabinets."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

PRODUCT CATEGORIES BY CATEGORY CODE

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

UL 1805

or

AS TO FIRE, ELECTRICAL AND MECHANICAL HAZARDS ONLY

Alternate UL Mark

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY]

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY-USE ELECTRICAL EQUIPMENT (OGTK)

USE

This category covers laboratory equipment used to measure, indicate, monitor or analyze substances, or to prepare materials, including in vitro diagnostic (IVD) equipment. Examples include but are not limited to blood/tissue/gas analyzers, centrifuges, hot plates and stirrers, sterilizers, fiber-optic illuminators and laboratory mixers.

MODULAR SYSTEMS

Laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

ACCESSORIES AND SUBASSEMBLIES

Field-installed accessories and subassemblies (component assemblies) to certified equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

REBUILT PRODUCTS

This category also covers laboratory equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt laboratory equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment is subject to the same requirements as new laboratory equipment.

FACTORS NOT INVESTIGATED

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically certified in the individual certifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Laboratory Equipment
- Laboratory Equipment Accessory (for field-installed accessories)
- Laboratory Equipment Module (for field-installed modules)
- Laboratory Equipment Subassembly (for field-installed subassemblies)

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" (or "Refurb") or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Laboratory equipment intended for patient contact is covered under Medical Equipment (PIDF).

Additional equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory (KQLR) and Measuring, Testing and Signal Generation Equipment (PICQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control and Laboratory Use – Part 1: General Requirements," and one or more of the following Particular Standards as applicable:

IEC 61010-2-010, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-010: Particular Requirements for Laboratory Equipment for the Heating of Materials"

IEC 61010-2-020, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-020: Particular Requirements for Laboratory Centrifuges"

IEC 61010-2-040, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-040: Particular Requirements for Sterilizers and Washer-Disinfectors Used to Treat Medical Materials"

IEC 61010-2-051, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-051: Particular Requirements for Laboratory Equipment for Mixing and Stirring"

IEC 61010-2-061, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-061: Particular Requirements for Laboratory Atomic Spectrometers with Thermal Atomization and Ionization"

IEC 61010-2-081, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-081: Particular Requirements for Automatic and Semi-Automatic Laboratory Equipment for Analysis and Other Purposes"

IEC 61010-2-101, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-101: Particular Requirements for In Vitro Diagnostic (IVD) Medical Equipment"

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

When the size or shape of a subassembly makes it impractical to bear the complete Certification Mark, the product may be marked with the UL symbol, "OGTK" and the file number, provided that the complete Certification Mark appears on the smallest shipping container.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Laboratory Equipment," or other appropriate product name as shown in the individual Listings.

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, "OGTK" and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

For field-installed modules, accessories and subassemblies, the product name includes the word "Module," "Accessory" or "Subassembly" (e.g., "Laboratory Equipment Accessory").

For rebuilt equipment, the word "Rebuilt," "Remanufactured," "Refurbished" (or "Refurb") or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY ELECTRICAL EQUIPMENT FOR USE IN HEALTH CARE APPLICATIONS (OGUI)

USE

This category covers laboratory equipment for health care applications, used to measure, indicate, monitor or analyze substances, or to prepare materials. Examples include but are not limited to centrifuges, hot plates and stirrers, sterilizers, fiber-optic illuminators and laboratory mixers.

MODULAR SYSTEMS

Laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

ACCESSORIES AND SUBASSEMBLIES

Field-installed accessories and subassemblies (component assemblies) to certified equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

REBUILT PRODUCTS

LABORATORY-USE ELECTRICAL EQUIPMENT (OGTK)

Laboratory Electrical Equipment for Use in Health Care Applications (OGUI)—Continued

This category also covers laboratory equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt laboratory equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment is subject to the same requirements as new laboratory equipment.

FACTORS NOT INVESTIGATED

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically certified in the individual certifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Laboratory Electrical Equipment for Use in Health Care Applications
- Laboratory Electrical Equipment Accessory for Use in Health Care Applications (for field-installed accessories)
- Laboratory Electrical Equipment Module for Use in Health Care Applications (for field-installed modules)
- Laboratory Electrical Equipment Subassembly for Use in Health Care Applications (for field-installed subassemblies)

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" (or "Refurb") or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Laboratory equipment intended for patient contact is covered under Medical Equipment (PIDF).

Additional equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory (KQLR), Measuring, Testing and Signal Generation Equipment (PICQ) and Laboratory Use Electrical Equipment (OGTK).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 61010A-1, "Electrical Equipment for Laboratory Use – Part 1: General Requirements," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control and Laboratory Use – Part 1: General Requirements," and one or more of the following Particular Standards as applicable:

- IEC 61010-2-010, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-010: Particular Requirements for Laboratory Equipment for the Heating of Materials"
- IEC 61010-2-020, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-020: Particular Requirements for Laboratory Centrifuges"
- IEC 61010-2-041, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-041: Particular Requirements for Autoclaves Using Steam for the Treatment of Medical Materials, and for Laboratory Processes"
- IEC 61010-2-042, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-042: Particular Requirements for Autoclaves and Sterilizers Using Toxic Gas for the Treatment of Medical Materials, and for Laboratory Processes"
- IEC 61010-2-043, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-043: Particular Requirements for Dry Heat Sterilizers Using Either Hot Air or Hot Inert Gas for the Treatment of Medical Materials, and for Laboratory Processes"
- IEC 61010-2-045, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-045: Particular Requirements for Washer Disinfectors Used in Medical, Pharmaceutical, Veterinary and Laboratory Fields"
- IEC 61010-2-051, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-051: Particular Requirements for Laboratory Equipment for Mixing and Stirring"
- IEC 61010-2-061, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-061: Particular Requirements for Laboratory Atomic Spectrometers with Thermal Atomization and Ionization"
- IEC 61010-2-081, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-081: Particular Requirements for Automatic and Semi-Automatic Laboratory Equipment for Analysis and Other Purposes"

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

When the size or shape of a subassembly makes it impractical to bear the complete Certification Mark, the product may be marked with the UL symbol, "OGUI" and the file number, provided that the complete Certification Mark appears on the smallest shipping container.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Laboratory Electrical Equipment for Use in Health Care Applications," or other appropriate product name as shown in the individual Listings.

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, "OGUI" and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

For field-installed modules, accessories and subassemblies, the product name includes the word "Module," "Accessory" or "Subassembly" (e.g., "Laboratory Equipment Accessory").

For rebuilt equipment, the word "Rebuilt," "Remanufactured," "Refurbished" (or "Refurb") or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY-USE ELECTRICAL EQUIPMENT, SPECIAL LABORATORY EQUIPMENT (OGVH)

GENERAL

This category covers laboratory equipment that uses special technologies to measure, indicate, monitor or analyze substances, or to prepare materials, or to sterilize materials or areas, and other laboratory equipment that uses special technologies to perform its function. Examples include but are not limited to room sterilizers, equipment sterilizers, disinfection equipment, laboratory air cleaners, and decontamination equipment.

This equipment has been certified as to electrical fire, shock and mechanical hazards only.

The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in ANSI/NFPA 70, "National Electrical Code."

The nature of some of this equipment is such that it involves features of installation and use not ordinarily presented in utilization equipment.

Such features are covered in the manufacturer's installation instructions. Installation should, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons, and should also be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

MODULAR SYSTEMS

Special laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

ACCESSORIES AND SUBASSEMBLIES

Field-installed accessories and subassemblies (component assemblies) to certified equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

FACTORS NOT INVESTIGATED

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically certified in the individual certifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Laboratory Disinfecting Equipment

352 LABORATORY-USE ELECTRICAL EQUIPMENT, SPECIAL LABORATORY EQUIPMENT (OGVH)

Laboratory Disinfecting Equipment Accessory (for field-installed accessories)
 Laboratory Disinfecting Equipment Module (for field-installed modules)
 Laboratory Disinfecting Equipment Subassembly (for field-installed subassemblies)
 Room Decontamination Equipment
 Room Decontamination Equipment Accessory (for field-installed accessories)
 Room Decontamination Equipment Module (for field-installed modules)
 Room Decontamination Equipment Subassembly (for field-installed subassemblies)
 Room Sanitizer
 Room Sanitizer Accessory (for field-installed accessories)
 Room Sanitizer Module (for field-installed modules)
 Room Sanitizer Subassembly (for field-installed subassemblies)
 Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Laboratory equipment intended for patient contact is covered under Medical Equipment (PIDF).
 Additional equipment that may be used in laboratories is covered under: Heaters, Industrial and Laboratory (KQLR)
 Laboratory Electrical Equipment for Use in Health Care Applications (OGUJ)
 Laboratory In Vitro Diagnostic Electrical Equipment (OGUR)
 Laboratory-use Electrical Equipment (OGTK)
 Measuring, Testing and Signal-generation Equipment (PICQ)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO ELECTRICAL FIRE, SHOCK AND MECHANICAL HAZARDS ONLY

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME*]

AS TO ELECTRICAL FIRE, SHOCK AND MECHANICAL HAZARDS ONLY

Control No.

* LABORATORY DISINFECTING EQUIPMENT, ROOM DECONTAMINATION EQUIPMENT, ROOM SANITIZER, or other appropriate product name as shown in the individual Classifications

For field-installed modules, accessories and subassemblies, the product name includes the word "MODULE," "ACCESSORY" or "SUBASSEMBLY" (e.g., "ROOM SANITIZER ACCESSORY").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lamp holders, Electric Discharge, 1000 Volts or Less (OKCT)

USE

This category covers lampholders and combination lampholders with starter holders intended for use with electric discharge or fluorescent lamps. This category also covers GU24 and GU24-1 holders for fluorescent and LED self-ballasted lamps and lamp adapters with mating pin bases.

Lamp holders for High Temperature — Thermoplastic lampholders investigated for use at temperatures greater than 90°C (194°F) are indicated in the individual certifications. These products are marked with "HT#" (where "#" is the temperature rating).

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Electric Discharge Lampholder
 Lampholder

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Separate starter holders are covered under Holders for Automatic Starters (FLPZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lamp holders."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a

control number, and the product name “Lampholder” or “Electric Discharge Lampholder,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMP HOLDERS, FITTINGS (OKQR)

USE

This category covers attachments and parts that modify lampholders for certain conditions of usage.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Lampholder Fitting
- Shadeholder

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, “Lampholders.”

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

LAMP HOLDERS, INCANDESCENT (OLDZ)

Lampholders, Adapters (OLRX)

GENERAL

This category covers screw-shell lamp adapters. Included are male-to-female screw-shell adapters and screw-shell adapters provided with attachment-plug blades or receptacles.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Adapter
- Incandescent Lampholder Adapter
- Lampholder Adapter

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

For plug-in devices with a lampholder intended to be used as a night-light, see Nightlights (QOYX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, “Lampholders.”

Lampholders, Candelabra and Miniature (OMFV)

GENERAL

This category covers screw-shell lampholders of the candelabra (E12) and miniature (E10) base sizes.

Candle lampholders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used in addition to the paper covering on the screw shell and terminals, to enclose the entire lampholder and provide the required depth of lamp cavity.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Candelabra Lampholder

Lampholders, Medium Base (ONHR)

GENERAL

This category covers screw-shell lampholders of the admedium (E29) and medium (E26) base sizes.

Candle lampholders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used, in addition to the paper covering on the screw shell and terminals, to enclose the entire lampholder and provide the required depth of lamp cavity.

Admedium (E29) bases are not intended for use with ordinary incandescent lamps.

Switched lampholders are tested on circuits involving a potential to ground of 125 V.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Incandescent Lampholder
Lampholder
Medium Lampholder

ADDITIONAL INFORMATION

LAMPS (OOKH)**LAMPS, SELF-BALLASTED AND LAMP ADAPTERS (OOLR)****USE AND INSTALLATION**

This category covers self-ballasted lamps consisting of a ballast, transformer or power supply, and an integrated or replaceable lamp, for direct connection to a lampholder. Products in this category employ various lamp technologies including, but not limited to, fluorescent lamps and high-intensity-discharge (HID) lamps. Devices with an integral lamp are termed “self-ballasted”; devices with a replaceable lamp are termed “adapters.” These products are intended for operation at the voltage marked on the product.

This category also covers fluorescent lamp adapters intended as direct substitutes for specific fluorescent lamps (e.g., F40T12RS), and designed to operate a more energy-efficient fluorescent lamp directly from the existing ballast without modifying the luminaire (e.g., T12 to T5 lamp adapters).

This category does not cover:

Self-ballasted lamps and lamp adapters rated 50 W or greater for installation in specific luminaires

LED lamps

These products are intended for connection to lampholders for outlet boxes and lampholders provided in luminaires, portable luminaires and signs. They are provided with ANSI lamp bases. ANSI base configurations are covered in standards such as NEMA_ANSLG C81.61, “Electrical Lamp Bases – Specifications for Bases (Caps) for Electric Lamps.” When differentiating between low-voltage and line-voltage ANSI lamp bases, consideration is given to Tables 7.3.3.1 and 7.3.3.2 in ANSI/UL 1598, “Luminaires.”

These products are generally for use in indoor, dry locations unless additionally investigated and marked for applications such as damp locations (not directly exposed to water). Products investigated and marked for wet locations may have additional restrictions regarding use or orientation.

These products have been investigated for use in the smaller of a 6 in. (152 mm) or 8 in. (203 mm) diameter, totally enclosed, recessed luminaire, if they will physically fit, unless marked not for use in a totally enclosed luminaire.

These products may be used with dimmers unless marked to prohibit such use (e.g., “DO NOT USE WITH DIMMERS” or “NOT FOR USE WITH DIMMERS”).

These products have not been investigated for use in emergency lighting equipment or exit signs.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Lamp Adapter

Self-ballasted Lamp

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Self-ballasted lamps and lamp adapters rated 50 W or greater for installation in specific luminaires are covered under Lamps, Self-ballasted and Lamp Adapters (OOLR2).

Self-ballasted light-emitting-diode (LED) lamps are covered under Lamps, Self-ballasted, Light-emitting-diode Type (OOLV).

LED lamps intended for specific luminaires or special applications are covered under Lamps, Self-ballasted, Light-emitting-diode Type (OOLV2).

User-replaceable solid-state (LED) light engines are covered under Solid-state Light Engines (OORA).

Solid-state (LED) light engines not intended for user replacement, or intended for specific luminaires or special applications are covered under Solid-state Light Engines (OORA2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1993, “Self-Ballasted Lamps and Lamp Adapters.”

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control num-

ber, and the product name “Self-ballasted Lamp” or “Lamp Adapter,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPS, SELF-BALLASTED, LIGHT-EMITTING-DIODE TYPE (OOLV)**USE AND INSTALLATION**

This category covers self-ballasted light-emitting-diode (LED) lamps, rated up to 277 V ac nominal, provided with ANSI lamp bases.

Self-ballasted lamps have integral control and driver circuitry allowing direct connection to a voltage source (e.g., mains, transformer) without the use of an external constant-current source such as a driver or ballast. Such lamps are intended for operation at their marked voltage(s).

This category also covers lamps intended as direct substitutes for specific fluorescent lamps, and designed to operate directly from the existing fluorescent ballast without modifying the luminaire.

These products are intended for connection to lampholders for outlet boxes and lampholders provided in luminaires, portable luminaires and signs. They are provided with ANSI lamp bases. ANSI base configurations are covered in standards such as NEMA_ANSLG C81.61, “Electrical Lamp Bases – Specifications for Bases (Caps) for Electric Lamps.” When differentiating between low-voltage and line-voltage ANSI lamp bases, consideration is given to Tables 7.3.3.1 and 7.3.3.2 in ANSI/UL 1598, “Luminaires.”

These products are generally for use in indoor, dry locations unless additionally investigated and marked for applications such as damp locations (not directly exposed to water). Products investigated and marked for wet locations may have additional restrictions regarding use or orientation.

LED lamps intended to replace or supplant traditional incandescent lamps have been investigated for use in the smaller of a 6 in. (152 mm) or 8 in. (203 mm) diameter, totally enclosed, recessed luminaire, if they will physically fit, unless marked not for use in a totally enclosed luminaire.

LED lamps intended to replace or supplant traditional fluorescent lamps have been investigated for use in totally enclosed lamp compartments with 1 in. (25.4 mm) of clearance around the sides and underneath the lamp, unless marked not for use in a totally enclosed luminaire.

Products marked “Suitable for Use in Open Luminaires” are intended to replace tungsten-halogen lamps in applications where the luminaire is open and does not require an additional lamp containment barrier.

These products may be used with dimmers unless marked to prohibit such use (e.g., “DO NOT USE WITH DIMMERS” or “NOT FOR USE WITH DIMMERS”).

These products have not been investigated for use in emergency lighting equipment or exit signs.

PRODUCT IDENTITY

The following product identity appears on the product:

LED Lamp

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

LED lamps intended for connection to constant-current power sources (e.g., LED drivers), or those intended for specific luminaires or special applications are covered under Lamps, Self-ballasted, Light-emitting-diode Type (OOLV2).

User-replaceable solid-state (LED) light engines are covered under Solid-state Light Engines (OORA).

Solid-state (LED) light engines not intended for user replacement, or intended for specific luminaires or special applications are covered under Solid-state Light Engines (OORA2).

LED retrofit kits intended for field installation in UL-certified luminaires or office-furnishing lights are covered under Light-emitting-diode Luminaire Retrofit Kits (IFAR).

Self-ballasted fluorescent and high-intensity-discharge (HID) lamps and lamp adapters are covered under Lamps, Self-ballasted and Lamp Adapters (OOLR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1993, “Self-Ballasted Lamps and Lamp Adapters.”

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify

LAMPS, SPECIALTY (OONB)

USE

This category covers specialty lamps, usually of the common bulb shapes, containing assemblies of light sources (such as miniature incandescent bulbs, light-emitting diodes) and associated electrical components, and provided with bases of various sizes, usually of the standard configurations covered in ANSI/ANSI/ANSI C81.61, "American National Standard for Electrical Lamp Bases - Specifications for Bases (Caps) for Electric Lamps."

These lamps are intended for use in certified equipment, such as exit fixtures or exit lights, where the product marking specifies the use of a lamp covered under this category.

PRODUCT MARKINGS

The lamp or the smallest unit container is marked with the wattage, voltage, manufacturer's identification and catalog number.

FACTORS NOT INVESTIGATED

Interchangeability of these lamps with commonly available lamps has not been investigated.

PRODUCT IDENTITY

The following product identity appears on the product:
Specialty Lamp

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 496, "Lampholders," and ANSI/UL 1993, "Self-Ballasted Lamps and Lamp Adapters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR USE IN PRODUCTS MARKED

TO USE UL-CERTIFIED LAMP, [company identification], [lamp catalog number(s)]

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. (++) Lamp catalog number

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPS, TUNGSTEN HALOGEN (OOOJ)

GENERAL

This category covers tungsten halogen lamps employing an integral shield that has only been investigated in accordance with the guard and shield requirements applicable to lighting products for use with tungsten halogen lamps.

These lamps may be used in all certified lighting products with or without a containment barrier where permitted by the product markings.

The lamp or the smallest unit container is marked with the wattage, voltage, lamp type, manufacturer and model number.

PRODUCT IDENTITY

The following product identity appears on the product:
Tungsten Halogen Lamp

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR PARTICLE CONTAINMENT ONLY

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TUNGSTEN HALOGEN LAMP

FOR PARTICLE CONTAINMENT ONLY

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ORGANIC LIGHT-EMITTING-DIODE PANELS (OOQS)

USE

This category covers organic light-emitting-diode (OLED) panels intended for installation directly to a building structure. Unless otherwise marked, they are intended for connection to an isolating power source that limits the voltage to no more than 30 V ac or 60 V dc, and the current to no more than 5 A.

PRODUCT MARKINGS

These panels are marked either for use with a specific power source (manufacturer and model number) or with its electrical input ratings (voltage, frequency, current and wattage).

PRODUCT IDENTITY

The following product identity appears on the product:
OLED Panel

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 8752, "Organic Light Emitting Diode (OLED) Panels."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "OLED Panel."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLID-STATE LIGHT ENGINES (OORA)

USE AND INSTALLATION

This category covers user-replaceable, solid-state, light-emitting-diode (LED) light engines, which are solid-state light sources incorporating one or more LED packages or arrays, an LED driver and a mains connection system. They are intended for mains connection through a "defined-fit system" of a compatible luminaire rated no more than 277 V to ground.

A "defined-fit system" is identified by a marking or a proprietary or industry designation assigned to a light engine interface (i.e., base) and its intended holder to control interchangeability.

These products do not employ ANSI standardized base configurations (e.g., Edison base) that are typically used for incandescent or fluorescent lamps.

These products are generally for use in indoor, dry locations unless additionally investigated and marked for applications such as damp locations (not directly exposed to water). Products investigated and marked for wet locations may have additional restrictions regarding use or orientation.

These products have not been investigated for use in emergency lighting equipment or exit signs.

RATINGS

Solid-state light engines are rated in ac or dc volts, watts and amperes. If intended for ac supplies, they are additionally rated in frequency.

All products are marked with their defined-fit system designation, a thermal fit code (when applicable), a maximum case-temperature rating and a test point (t_c).

PRODUCT IDENTITY

One of the following product identities appears on the product:

- LED Light Engine
- Solid-state Light Engine

RELATED PRODUCTS

Solid-state (LED) light engines not intended for user replacement, or intended for specific luminaires or special applications are covered under Solid-state Light Engines (OORA2).

Self-ballasted fluorescent or high-intensity-discharge (HID) lamps provided with bases standardized for incandescent and fluorescent luminaires are covered under Lamps, Self-ballasted and Lamp Adapters (OOLR).

Self-ballasted light-emitting-diode (LED) lamps provided with bases standardized for incandescent and fluorescent luminaires are covered under Lamps, Self-ballasted, Light-emitting-diode Type (OOLV).

LED retrofit kits intended for field installation in UL-certified luminaires or office-furnishing lights are covered under Light-emitting-diode Luminaire Retrofit Kits (IFAR).

LED light sources having provision for field wiring in accordance with ANSI/NFPA 70, "National Electrical Code," are luminaires and covered under Light-emitting-diode Surface-mounted Luminaires (IFAM) or Light-emitting-diode Recessed Luminaires (IFAO).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 8753, "Field-Replaceable Light Emitting Diode (LED) Light Engines."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Intro-

Solid-state Light Engines (OORA)—Continued

tion of this Directory) together with the word "LISTED," a control number, and the product name "Solid-state Light Engine" or "LED Light Engine."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LEAK-DETECTION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (OPDH)

GENERAL

This category covers leak-detection equipment, including control units, indicators, sensors, probes and auxiliary devices, used as part of leak-detection systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Leak-detection Equipment for Use in Hazardous Locations
- Leak-detection Equipment (Associated Apparatus)

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Leak Detection Equipment for Use in Hazardous Locations" or "Leak Detection Equipment (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIGHTING AND POWER EQUIPMENT, AUXILIARY (OUST)

USE AND INSTALLATION

This category covers equipment intended to be used in conjunction with a facility emergency lighting and power system. The equipment may consist of battery assemblies, unit equipment, remote light sources, illuminated signs, or related devices.

This equipment is intended for indoor, dry locations only unless marked for damp or wet locations.

This equipment has not been investigated for compliance with the performance criteria of Article 700 of ANSI/NFPA 70, "National Electrical Code," ANSI/NFPA 101, "Life Safety Code," or the "Uniform Fire Code."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Auxiliary Lighting Equipment
- Auxiliary Power Equipment

358 LIGHTING AND POWER EQUIPMENT, AUXILIARY (OUST)

RELATED PRODUCTS

See Emergency Lighting and Power Equipment (FTBR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 924, "Emergency Lighting and Power Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Auxiliary Lighting Equipment" or "Auxiliary Power Equipment."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIGHTING AND POWER EQUIPMENT, AUXILIARY FOR USE IN HAZARDOUS LOCATIONS (OUSZ)

USE AND INSTALLATION

This category covers equipment intended to be used in conjunction with a facility emergency lighting and power system. The equipment may consist of battery assemblies, unit equipment, remote light sources, illuminated signs, or related devices.

This equipment is intended for indoor, dry locations only unless marked for damp or wet locations.

This equipment has not been investigated for compliance with the performance criteria of Article 700 of ANSI/NFPA 70, "National Electrical Code," ANSI/NFPA 101, "Life Safety Code," or the "Uniform Fire Code."

PRODUCT IDENTITY

One of the following product identities appears on the product:

Auxiliary Lighting Equipment for Use in Hazardous Locations

Auxiliary Power Equipment for Use in Hazardous Locations

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

RELATED PRODUCTS

See Emergency Lighting Equipment for Use in Hazardous Locations (FTEV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 924, "Emergency Lighting and Power Equipment."

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 844, "Luminaires for Use in Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LIGHTNING PROTECTION (OVGR)
LIGHTNING CONDUCTORS, AIR TERMINALS
AND FITTINGS (OVTZ)**

GENERAL

LIGHTNING PROTECTION (OVGR)

Lightning Conductors, Air Terminals and Fittings (OVTZ)—Continued

This category covers lightning-protection components intended to be installed to provide a lightning-protection system complying with UL 96A, "Installation Requirements for Lightning Protection Systems," and ANSI/NFPA 780, "Installation of Lightning Protection Systems," as evidenced by UL's Master Label® Certificate. These components should be installed using the prescribed manufacturer's installation instructions.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Air Terminal

Fitting

Lightning Conductor

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 96, "Lightning Protection Components."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lightning Conductor," "Air Terminal" or "Fitting," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIGHTNING PROTECTION SYSTEM INSTALLATIONS (OWAY)

GENERAL

This category covers the installation of lightning protection systems on structures to protect them from damage by lightning. The issuance of a Master Label® Certificate is evidence that the installation of the lightning protection system (1) has been made by an installer that subscribes to UL's Follow-Up Service, (2) employs materials subject to factory inspection service and bears the UL Mark, and (3) is subject to a field inspection program covering proper installation of the system.

RELATED PRODUCTS

Manufacturers of Listed ground rods suitable for use in installations of lightning protection equipment are covered under Grounding and Bonding Equipment (KDER).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate the lightning protection systems in this category are UL 96A, "Installation Requirements for Lightning Protection Systems," or ANSI/NFPA 780, "Installation of Lightning Protection Systems," or IEC 62305-1 (2010), "Protection Against Lightning - Part 1: General Principles," and IEC 62305-3 (2010), "Protection Against Lightning - Part 3: Physical Damage to Structures and Life Hazard."

Inspection of the surge suppression may be excluded at the request of the installer.

UL CERTIFICATE

The Master Label® Certificate of UL is the only method provided by UL to identify lightning protection systems covered under its Certificate and Follow-Up Service. Installations for which Certificates are issued are considered by UL to be compliant with the applicable requirements at the time of issuance. The Certificate identifies the standard used for the investigation. The Master Label® Certificate is limited to five years from the date of issue and must be renewed to remain in effect.

At the request of the installer, surge protection may be excluded from the scope of the inspection. The Certificate specifically states this exclusion with one of the following statements, as applicable:

"Surge protection was not inspected."

Lightning Protection System Installations (OWAY)—Continued

“The electrical service entrance surge protection system was not inspected.”

“The communication surge protection system was not inspected.”

The above wording is followed by the cautionary statement:

“Surge protection devices are an integral component of a complete lightning protection system and should be provided on all incoming and exiting electric, power, data, and communication services.”

UL maintains a factory inspection service for counterchecking conductors, air terminals and fittings, and also a field inspection service for counterchecking installations.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURGE-PROTECTIVE DEVICES CERTIFIED FOR USE IN SPECIFIED EQUIPMENT (OWIW)

GENERAL

This category covers surge-protective devices (SPDs) rated 120/240 V maximum, intended to be connected to circuits having an available system short-circuit current of 10 kA maximum and suitable for use as plug-in devices in specified panelboards. The SPDs are certified for use in specified panelboards in accordance with the details on the SPD or in the publication provided with the SPD.

PRODUCT MARKINGS

The SPDs are marked on the side with the statement: “Classified for use only in specified panelboards where the available short-circuit current is 10 kA, 120/240 volts ac or less. Do not use in equipment connected to circuits having an available system short-circuit current in excess of 10 kA, 120/240 volts ac.”

In addition, one of the following statements (or the compatibility list) is marked on the side of the SPD: “For catalog numbers of compatible panelboards, refer to the installation instructions provided with the SPD,” or “For catalog numbers (or equivalent) of specified panelboards, refer to Publication No. ___ provided with this SPD.” The referenced publication is a compatibility list that tabulates the company name, catalog number and electrical ratings of the certified SPD, in addition to the company name and catalog number of the applicable UL-certified panelboards for which the certified SPD has been investigated for use. One copy of the compatibility list is provided with each SPD.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- SPD
- Surge-protective Device

RELATED PRODUCTS

See Surge-protective Devices (VZCA), Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ) and Circuit Breakers, Molded Case, Certified for Use in Specified Equipment (DIXF).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1449, “Surge Protective Devices,” in addition to the requirements contained in Supplement SC of ANSI/UL 67, “Panelboards.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**FOR CATALOG NUMBERS OF COMPATIBLE PANELBOARDS,
REFER TO THE INSTALLATION INSTRUCTIONS PROVIDED WITH
THE SPD**

Alternate UL Mark

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]

**FOR CATALOG NUMBERS OF COMPATIBLE PANELBOARDS,

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LINE ISOLATION MONITORS (OWLS)

GENERAL

This category covers line isolation monitors, with or without supplementary remote indicating units, designed to supervise the isolated power-supply circuits in hospital inhalation anesthetizing locations.

The monitor and supplementary indicating units are intended to be installed in any of the following locations in conformity with the applicable requirements of ANSI/NFPA 99, “Health Care Facilities Code,” and ANSI/NFPA 70, “National Electrical Code”:

- (a) Nonhazardous anesthetizing area
- (b) Above a hazardous area (5 ft or more above the floor)
- (c) Included as part of an isolated power-supply center

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Line Isolation Monitor
- Line Isolation Monitor Accessory

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1022, “Line Isolation Monitors.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Line Isolation Monitor” or “Line Isolation Monitor Accessory.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC POWER- SWITCHING DEVICES (PAPU)

GENERAL

This category covers devices such as low-voltage ac power circuit breakers, low-voltage dc power circuit breakers, low-voltage ac power circuit protectors, low-voltage ac integrally-fused power circuit breakers, and low-voltage power-switching device adapters.

Low-voltage power-switching devices have been investigated for continuous duty at 100% of their current ratings and are designed to provide service-entrance, feeder or branch-circuit protection. They may be manually and/or electrically operable.

These low-voltage power-switching devices, enclosures and adapters are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and are on a wiring diagram or other readily-visible location.

Stationary equipment is normally bus connected. However, terminal pads are provided which can accommodate field-installed pressure-wire connectors.

PRODUCT MARKINGS AND RATINGS

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and on the use of 75°C wire for higher amp-rated circuits.

Low-voltage power-switching devices suitable for use with an accessory are marked to indicate the accessory(s), the electrical rating and proper connections (if not obvious).

Low-voltage power-switching devices without enclosures are intended for use only in Listed enclosures or as part of other Listed equipment which has been and are marked for use with a specific low-voltage power switching device.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ACCESSORIES, LOW-VOLTAGE POWER-SWITCHING DEVICES (PAQF)

GENERAL

This category covers accessories such as shunt trip devices, undervoltage trip devices, alarm switches and auxiliary switches intended for field installation for use only with specific low-voltage power-switching devices. Correct combinations of low-voltage power-switching devices and accessories are indicated by markings on or with the accessory and/or the low-voltage power-switching device.

PRODUCT IDENTITY

The following product identity appears on the product:

Low-voltage Power-breaker Accessory

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.13, "Low-Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/NEMA C37.50, "Switchgear – Low Voltage AC Power Circuit Breakers Used in Enclosures – Test Procedures."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage Power Breaker Accessory," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ADAPTERS, LOW-VOLTAGE AC POWER-SWITCHING DEVICES (PAQQ)

GENERAL

This category covers equipment designed to adapt low-voltage power-switching devices to receiving devices, such as individual enclosures, dead-front switchboards (switchgear), panelboards, etc. Field installation is intended only in those receiving devices which are specifically marked for their use.

These adapters have been investigated in conjunction with power-switching devices and have been found suitable to carry 100% of the current rating of the power-switching device, and to withstand the maximum fault-current levels specified on the power-switching device.

PRODUCT MARKINGS

The adapters are marked to indicate the power-switching device with which they may be used.

PRODUCT IDENTITY

The following product identity appears on the product:

Low-voltage Power-switching-device Adapter

Adapters, Low-voltage AC Power-switching Devices (PAQQ)–Continued

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/NEMA C37.50, "Switchgear – Low Voltage AC Power Circuit Breakers Used in Enclosures – Test Procedures," and ANSI/IEEE C37.20.1, "Standard for Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage Power Switching Device Adapter."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RETROFIT LOW-VOLTAGE AC POWER-SWITCHING-DEVICE ADAPTERS CERTIFIED FOR USE IN SPECIFIED EQUIPMENT (PAQR)

GENERAL

This category covers retrofit adapters for use in specified equipment, intended to adapt certified low-voltage power ac circuit breakers in place of those of another manufacturer. The specified equipment includes dead-front switchboards, switchgear, and the like. These retrofit adapters have been investigated in conjunction with low-voltage power AC circuit breakers and have been found suitable to carry 100% of the current rating of the low-voltage power AC circuit breakers, and to withstand the maximum fault-current levels specified on the low-voltage power ac circuit breakers.

PRODUCT MARKINGS

In addition to other required markings, the nameplate for these adapters is marked to indicate the specified equipment, including the manufacturer and model number or type, for which the adapters are intended.

RELATED PRODUCTS

See Retrofit Low-voltage AC Power Circuit Breakers Classified for Use in Specified Equipment (PASD) and Adapters, Low-voltage AC Power-switching Devices (PAQQ).

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," and ANSI/IEEE C37.59, "IEEE Standard Requirements for Conversion of Power Switchgear Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

RETROFIT LOW-VOLTAGE POWER-SWITCHING-DEVICE ADAPTER FOR USE ONLY IN EQUIPMENT AS DESIGNATED ON THE NAMEPLATE

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Retrofit Low-voltage AC Power-switching-device Adapters Certified for Use in Specified Equipment (PAQR)—Continued

RETROFIT LOW-VOLTAGE POWER-SWITCHING-DEVICE ADAPTER FOR USE ONLY IN EQUIPMENT AS DESIGNATED ON THE NAMEPLATE
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC FUSE DRAW-OUTS (PAQT)
GENERAL

This category covers fuse draw-outs intended to be installed in switchgear and connected in series with certified low-voltage ac power circuit breakers in order to extend the short-circuit current rating of the circuit breaker.

Fuse draw-outs consist of fuses or current limiters and an open fuse-trip device in a draw-out-type assembly. The open fuse-trip device will cause the associated circuit breaker to trip when any fuse or current limiter opens.

These devices have been investigated in combination with specific circuit breakers for use on circuits having an available fault current of 200,000 rms symmetrical amps, maximum, 3-phase.

PRODUCT MARKINGS

Fuse draw-outs are marked with maximum voltage, frequency, continuous current and short-circuit current ratings, and the type or catalog number designation of the circuit breaker with which it is intended to be used.

PRODUCT IDENTITY

The following product identity appears on the product:

Low-voltage AC Fuse Draw-out

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/NEMA C37.50, "Switchgear – Low Voltage AC Power Circuit Breakers Used in Enclosures – Test Procedures," and ANSI/IEEE C37.20.1, "Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage AC Fuse Draw-Out."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC POWER CIRCUIT BREAKERS (PAQX)
GENERAL

This category covers low-voltage power circuit breakers specifically designed to provide service-entrance, feeder or branch-circuit protection or serve as a disconnecting means. This category also covers power circuit breaker enclosures. They are covered by the classifications indicated by the label designation as follows:

Low-voltage ac power circuit breaker — Without enclosure, and with or without noninterchangeable trip devices.

Low-voltage ac power breaker frame — Frame only of power circuit breaker with provision for interchangeable trip devices. A certified low-

LOW-VOLTAGE AC POWER-SWITCHING DEVICES (PAPU)

361

Low-voltage AC Power Circuit Breakers (PAQX)—Continued

voltage power circuit breaker frame is certified for use only with a certified low-voltage ac power circuit breaker trip device.

Low-voltage ac power circuit breaker trip device — Trip device only of a power circuit breaker having provisions for interchangeable trip devices.

Low-voltage ac power-switching device enclosure — Enclosure only for individual 1-, 2- or 3-pole power circuit breaker.

The frame size determines the maximum continuous-current rating for all parts of a low-voltage ac power circuit breaker except the coils of the direct-acting trip device. The rating of the trip device determines the actual continuous-current rating.

The trip devices may contain ground-fault current, longtime-delay overcurrent, short-time-delay overcurrent and instantaneous overcurrent trip elements that may be adjustable. The tolerance of the marked position of the longtime-delay overcurrent trip setting is plus or minus 10%.

A ground-fault current trip element is one that functions at all values of current at or above a predetermined value of fault current to ground.

An instantaneous overcurrent trip element is one that functions with no purposely delayed action at all values of current at or above a predetermined value of overcurrent.

A long-time overcurrent trip element is one that functions with a purposely delayed action at all values of current between a predetermined value of overcurrent and the short-time or instantaneous pick-up settings of the circuit breaker.

A short-time-delay overcurrent trip element is one that functions with a purposely delayed action at all values of current between a predetermined value of overcurrent and the short-time current rating of the circuit breaker.

Circuit breakers without trip devices cannot of themselves respond to overcurrent, short-circuit or ground faults and are marked "No Over-Current Protection Provided" or "If Over-Current Protection is Required, Use With Type ___ Protective Relays." Circuit breakers without trip devices can respond to overcurrent when properly connected to protective relays.

PRODUCT MARKINGS

Low-voltage ac power circuit breakers are marked with maximum voltage, frequency, continuous current, short-time current, short-circuit current (interrupting rating) and control-voltage ratings. The short-time current rating is the designated limit of fault current that the low-voltage ac power circuit breaker can successfully carry for a short interval. Other rating information, such as the nominal design voltage and time-delay overcurrent trip setting, may be provided.

The short-circuit current rating of a low-voltage ac power circuit breaker may be extended by connecting a low-voltage ac fuse draw-out in series. When such connection is used, the circuit breaker is provided with means for tripping by way of a signal from an open fuse-trip device. The open fuse-trip device may be either on the fuse draw-out or on the circuit breaker. Circuit breakers are marked with the catalog or type designation of the fuse draw-out with which they are intended to be used.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Low-voltage AC Power Circuit Breaker
Low-voltage AC Power Breaker Frame
Low-voltage AC Power Circuit-breaker Trip Unit
Low-voltage AC Power-switching-device Enclosure

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are: ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.13, "Low-Voltage AC Power Circuit Breakers Used in Enclosures," IEEE C37.13A (2012), "Low-Voltage AC Power Circuit Breakers Used in Enclosures — Amendment 1: Increase of Voltages to 1000 V AC and Below" IEEE C37.17 (2012), "Trip Systems for Low-Voltage (1000 V and Below) AC and General Purpose (1500 V and Below) DC Power Circuit Breakers" ANSI/NEMA C37.50, "Switchgear – Low Voltage AC Power Circuit Breakers Used in Enclosures – Test Procedures."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Secondary Network Protectors (PARZ)

USE

This category covers secondary network protectors for use in spot or grid networks rated 600 V or less. These protectors consist of a circuit breaker and its control equipment. They are used for automatically disconnecting a transformer from a secondary network in response to predetermined electrical conditions on the primary feeder or transformer. They are also used for connecting a transformer to a secondary network either through manual control or automatic control responsive to predetermined electrical conditions on the feeder and the secondary network.

PRODUCT MARKINGS

Each secondary network protector is marked with the company name, model number and its electrical ratings, which includes the maximum short circuit rating of the device.

PRODUCT IDENTITY

The following product identity appears on the product:
Secondary Network Protector

ADDITIONAL INFORMATION

For additional information, see Low Voltage AC Power Circuit Breakers (PAQX), Low Voltage AC Power Switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is IEEE C57.12.44, "IEEE Standard Requirements for Secondary Network Protectors."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Secondary Network Protector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RETROFIT LOW-VOLTAGE AC POWER
CIRCUIT BREAKERS CERTIFIED FOR USE
IN SPECIFIED EQUIPMENT (PASD)**

GENERAL

This category covers retrofit low-voltage ac power circuit breakers of present design that have been modified and investigated for use in place of low-voltage power ac circuit breakers of another manufacturer. These circuit breakers are intended to be installed in equipment such as dead-front switchboards, switchgear, and the like.

PRODUCT MARKINGS

In addition to other required markings, the nameplate for these circuit breakers is marked to indicate the specified equipment, including the manufacturer and model number or type, for which the circuit breakers are intended.

RELATED PRODUCTS

Retrofit Low-voltage AC Power Circuit Breakers Certified for Use in Specified Equipment (PASD)—Continued

See Low-voltage AC Power Circuit Breakers (PAQX) and Retrofit Low-voltage AC Power-switching-device Adapters Classified for Use in Specified Equipment (PAQR).

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," and ANSI/IEEE C37.59, "IEEE Standard Requirements for Conversion of Power Switchgear Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**RETROFIT LOW-VOLTAGE AC POWER CIRCUIT BREAKER
FOR USE ONLY IN EQUIPMENT AS DESIGNATED ON THE
NAMEPLATE**

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**RETROFIT LOW-VOLTAGE AC POWER CIRCUIT BREAKER
FOR USE ONLY IN EQUIPMENT AS DESIGNATED ON THE
NAMEPLATE**

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LOW-VOLTAGE AC INTEGRALLY-FUSED
POWER CIRCUIT BREAKERS (PASQ)**

GENERAL

This category covers low-voltage ac integrally fused power circuit breakers rated 600 V maximum. Low-voltage ac integrally fused power circuit breakers include all the mechanical features of low-voltage ac power circuit breakers and, in addition, have current limiters or current-limiting fuses that function to increase the fault-current interrupting rating of the low-voltage ac integrally fused power circuit breakers.

These devices have been investigated for use on three-phase circuits having available fault currents of 200,000 rms symmetrical amps, maximum.

In addition to overcurrent trip elements of the low-voltage ac power circuit breakers, these are provided with an anti-single-phase tripping device that automatically opens the circuit breaker contacts in response to circuit interruption by the current limiter or the current-limiting fuse.

These devices are intended for use in certified switchgear or switchboards with certified adapters.

PRODUCT MARKINGS

Low-voltage ac integrally fused circuit breakers are marked with the maximum voltage, frequency, continuous current, short-circuit current (interrupting rating), intended fuse rating and type, and control voltage ratings. Other rating information, such as the nominal design voltage and time-delay over-current tripping setting, may be provided.

PRODUCT IDENTITY

The following product identity appears on the product:
Low-voltage AC Integrally Fused Power Circuit Breaker

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.13, "Low-Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/NEMA C37.50, "Switchgear – Low Voltage AC Power Circuit Breakers Used in Enclosures – Test Procedures."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Low-voltage AC Integrally-fused Power Circuit Breakers (PASQ)—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark
UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage AC Integrally Fused Power Circuit Breaker."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE DC POWER CIRCUIT BREAKERS (PAXW)

USE

This category covers stationary and draw-out low-voltage dc power circuit breakers specifically designed to provide service-entrance, feeder or branch-circuit protection. Low-voltage dc power circuit breakers are separated into four types: general purpose, rectifier, high speed and semi-high speed.

These products are intended for use in certified switchgear or switchboards with certified adapters.

PRODUCT MARKINGS

These products are marked with the type of circuit breaker, frame size, rated maximum voltage, rated continuous current, rated peak current (when applicable), rated short-time current (where applicable), rated short-circuit current and rated control voltage.

PRODUCT IDENTITY

The following product identity appears on the product:
Low-voltage DC Power Circuit Breaker

ADDITIONAL INFORMATION

For additional information, see Low Voltage AC Power Switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," and ANSI/IEEE C37.14, "Low-Voltage DC Power Circuit Breakers Used in Enclosures."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark
UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRIP DEVICES CERTIFIED FOR USE IN LOW-VOLTAGE AC POWER CIRCUIT BREAKERS (PAYK)

USE

This category covers trip devices suitable for use in place of the original trip device of a low-voltage ac power circuit breaker. Certification covers only the trip device in its ability to sense and respond to overcurrent and fault-current conditions.

This category does not cover the circuit breaker on which the trip device is mounted.

Trip Devices Certified for Use in Low-voltage AC Power Circuit Breakers (PAYK)—Continued

PRODUCT IDENTITY

The following product identity appears on the product:
Trip Device

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/IEEE C37.59 (1996), "IEEE Standard Requirements for Conversion of Power Switchgear Equipment," which references ANSI/IEEE C37.13 (1990), "Low-Voltage AC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.17 (1997), "Trip Devices for AC and General Purpose DC Low Voltage Power Circuit Breakers," ANSI/NEMA C37.50 (1989), "Switchgear Low Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

ANSI/IEEE C37.59
Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TRIP DEVICE
IN ACCORDANCE WITH IEEE C37.59-[date]
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE DISTRIBUTION SYSTEMS AND EQUIPMENT FOR DESK AND SIMILAR WORK-SURFACE INSTALLATIONS (PAYN)

USE AND INSTALLATION

This category covers low-voltage distribution systems and equipment intended for installation and use indoors in dry locations, other than hazardous (classified), in accordance with ANSI/NFPA 70, "National Electrical Code."

These systems are intended to be installed on a desk or similar work surface. A system consists of:

1. A single supply connection to the premises branch circuit,
2. A power supply with Class 2 output(s) operating at 30 V ac (42.4 V peak) or less, or 60 V dc or less,
3. An interconnecting system (such as a track, rail, conductors or cords) for connecting the Class 2 source to the low-voltage equipment, and
4. Low-voltage equipment electrically connected to the interconnecting system.

A system may also include standard AC convenience receptacles rated 125 or 250 V, 15 or 20 A.

A low-voltage system is typically intended for installation in or on work surfaces such as desks in office environments (home or commercial). These systems are not intended for locations such as kitchen counters, bathrooms, or similar locations near plumbing fixtures or heating surfaces.

INSTALLATION INSTRUCTIONS

Instructions accompanying the power supply and interconnection system describe the installation of the Class 2 power supply and its connection to the branch circuit, the interconnecting system, and the Class 2 wiring method intended to be used between the Class 2 power supply, the low-voltage interconnecting system, and the low-voltage equipment.

**LOW-VOLTAGE DISTRIBUTION SYSTEMS AND EQUIPMENT
FOR DESK AND SIMILAR WORK-SURFACE
INSTALLATIONS (PAYN)**

364

Instructions accompanying the low-voltage equipment include a) a product description, b) a statement to identify the low-voltage system, c) a description of the parts intended to be used, and d) instructions describing how the parts are intended to be installed.

PRODUCT MARKINGS

System components are marked with:

1. The Listee's name, trade name, trademark or other descriptive marking by which the manufacturer responsible for the product may be identified.
2. A distinctive catalog number or the equivalent.
3. The electrical rating.
4. The date or other dating period of manufacture of the product not exceeding any three consecutive months.

Low-voltage equipment — In addition to the required markings specified above for system components, each piece of low-voltage equipment is marked with:

1. A product type, and
2. The specific low-voltage system with which it is intended to be used.

Class 2 power supplies — In addition to the required markings specified above for system components, each power supply is marked with the specific low-voltage system with which it is intended to be used.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Work-surface Low-voltage Distribution System
- Work-surface Low-voltage Equipment

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 2851, "Outline of Investigation for Low-voltage Distribution Systems and Equipment for Desk and Similar Work-surface Installations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MANAGEMENT EQUIPMENT, ENERGY
(PAZX)**

USE

This category covers energy management equipment that energizes or de-energizes electrical loads to achieve the desired use of electrical power. This equipment normally controls electrical loads by responding to sensors or transducers monitoring power consumption, by sequencing, by cycling the loads through the use of preprogrammed data logic circuits, or any combination thereof. Devices responding to signals from a utility company may receive the signals over the power lines or as radio signals. This category includes component devices that are part of the smart grid system, other than for industrial applications.

These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety. When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled load.

This category also covers controls and components that may form part of building automation systems or subsystems.

Typical loads controlled are space heating, air conditioning, lighting and other similar loads.

Class 2 Output Circuits

A Class 2 output circuit is a device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit that is marked to permit wiring as specified in Article 725 of ANSI/NFPA 70, "National Electrical Code" (NEC), for the Class 2 circuit.

Ratings

This equipment has a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of this equipment are based on the manufacturer's declarations and verified through testing. An input/output circuit that fulfills the requirements for both SELV and limited-energy not exceeding 15 W is considered to address the risk of fire and electric shock. An input/output circuit is marked "Class 2" when the electrical characteristics of the circuits meet the requirements in Article 725 of the NEC, specifically Table 11(A) or 11(B) in Chapter 9, under normal and single-component fault operating condition.

MANAGEMENT EQUIPMENT, ENERGY (PAZX)

Classification

Controls are classified based on their unique features, intended applications and environment, level of reliability, etc. These classifications are noted in ANSI/UL 60730-1, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements." Two of the more common classifications are:

Type 1 action — Automatic action for which the manufacturing deviation and the drift (calibration) of its operating value, operating time, or operating sequence have not been declared and tested under this standard.

Type 2 action — Automatic action for which the manufacturing deviation and the drift (calibration) of its operating value, operating time, or operating sequence have been declared and tested under this standard.

Type of Disconnection

Full disconnection on operation (Type 1.A or 2.A) — Contact separation in all supply poles other than earth so as to provide the equivalent of basic insulation between the supply mains and those parts intended to be disconnected.

Micro-disconnection on operation (Type 1.B or 2.B) — Adequate contact separation in at least one pole so as to provide functional security.

Micro-interruption on operation (Type 1.C or 2.C) — Interruption of a circuit by contact separation, by a cycling action, or by a noncycling action which does not provide full disconnection or micro-disconnection.

Electronic disconnection on operation (Type 1.Y or 2.Y) — A noncycling interruption by an electronic device of a circuit for functional disconnection and which provides a disconnection other than by means of an air gap by satisfying certain electrical requirements in at least one pole.

Devices are intended to be used only within the manufacturer's brand and product series as indicated in the manufacturer's instructions. Exceptions are specifically identified.

FACTORS NOT INVESTIGATED

The effects of the controls on the performance ratings of the connected loads have not been investigated.

PRODUCT MARKINGS

"Energy Management Equipment Enclosure," "Energy Management Equipment Enclosure Part," "Energy Management Equipment Subassembly," "Energy Management Equipment Accessory" and the like require modular labeling. The marking on the individual subassembly, or smallest container, will make reference to 1) a wiring diagram for interconnection of a system, and 2) the various combinations of subassemblies that may be employed to comprise the system unit.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Building Management Equipment
- Building Management System
- Enclosed Energy Management Equipment
- Energy Management Equipment
- Energy Management Equipment Accessory
- Energy Management Equipment Enclosure
- Energy Management Equipment Enclosure Part
- Energy Management Equipment Subassembly
- Open Energy Management Equipment

The word "Management" may be abbreviated "Mgmt" or "Mgt" (with or without a period); the word "Equipment" may be abbreviated "Equip" or "Eqpt" (with or without a period).

RELATED PRODUCTS

Signal system units incorporating energy management systems are covered under Signal System Units (UDTZ).

Switching devices operated by a clock mechanism and other similar type products used to energize or de-energize loads are covered under Switches, Clock Operated (WGZR).

Energy-usage-monitoring equipment (not controlling loads directly) is covered under Energy Usage Monitoring Systems (FTRZ).

Measurement equipment is covered under Measuring, Testing and Signal-generation Equipment (PICQ).

Temperature-indicating and -regulating switches are covered under Temperature-indicating and -Regulating Equipment (XAPX) and Controllers, Refrigeration (SDFY).

Nonindustrial photoelectric switches for lighting control and/or motion-sensitive switches intended for nonindustrial applications are covered under Switches, Photoelectric (WJCT).

Plug-in, locking-type photocontrols for use with area lighting intended for parking lot and roadway lighting are covered under Photocontrols, Plug-in, Locking Type (WJFX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 916, "Energy Management Equipment," or ANSI/UL 60730-1, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements."

UL MARK

MANAGEMENT EQUIPMENT, ENERGY (PAZX)

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Building Management System," "Building Management Equipment," "Energy Management Equipment," "Open Energy Management Equipment," "Enclosed Energy Management Equipment," "Energy Management Equipment Enclosure," "Energy Management Equipment Enclosure Part," "Energy Management Equipment Subassembly" or "Energy Management Equipment Accessory."

The word "Management" may be abbreviated "Mgmt" or "Mgt" (with or without a period); the word "Equipment" may be abbreviated "Equip" or "Eqpt" (with or without a period).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANUFACTURED HOME KITCHEN CABINETRY AND BATHTUB AND SHOWER UNITS (PDLT)

GENERAL

This category covers finished units, components, and/or materials have been certified in accordance with the flammability requirements of the Federal Manufactured Home Construction and Safety Standards; Section 3280.203(b)(5) for kitchen cabinet doors, counter tops, back splashes, exposed bottoms, and end panels or Section 3280.203(b)(6) for plastic bathtubs, shower units, and tub or shower doors.

The insulating, acoustical, structural, toxicity of products of combustion and other properties have not been investigated. The certification pertains to the finished units, components, and/or materials themselves, and not to the structures in which they are installed.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANUFACTURED HOMES (PDOV)

GENERAL

This category covers manufactured homes, which are structures, transportable in one or more sections, built on a permanent chassis and designed to be used with or without a permanent foundation.

All manufactured homes include provisions for attachment to anchoring and tie-down devices and suitable piers and footings at the installation site.

Manufactured homes are intended for installation subject to approval by the Authority Having Jurisdiction.

PRODUCT IDENTITY

The following product identity appears on the product:
Manufactured Home

RELATED PRODUCTS

Prefabricated modular buildings are covered under Composite Panels (QRSY).

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic standard used to investigate manufactured homes intended for use as dwelling units is 24CFR3280, "Manufactured Home Construction and Safety Standards" (December 18, 1975).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

One Certification Mark is applied near the data plate (single-wide) or near the data plate and at eye level in the largest bedroom closet of each additional transportable section (double- and triple-wide) of each manufactured home intended for use as a dwelling unit. In addition, information concerning the equipment and appliances factory furnished as part of the manufactured home is included on a data plate posted within the building.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**SEE HUD LABEL
Alternate UL Mark
UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. MARINA AND BOATYARD CABLE (PDYQ)

USE

PRODUCT CATEGORIES BY CATEGORY CODE

This category covers cable intended for use as flexible branch circuit and feeder wiring in marinas and boatyards in accordance with Article 555 of ANSI/NFPA 70, "National Electrical Code."

The cable is rated 600 V, 75°C and is suitable for exposure to sunlight, fresh water, salt water, gasoline, diesel fuel and lubricating oil.

PRODUCT IDENTITY

The following product identity appears on the product:
Marina and Boatyard Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Marine Products (AAMP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 83, "Thermoplastic-Insulated Wires and Cables."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "MARINE," the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marina and Boatyard Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MARKING AND CODING EQUIPMENT, ELECTRONIC (PGBE)

USE AND INSTALLATION

This category covers electronic marking and coding equipment rated 600 V or less. Included in this category are ink jet printers or similar systems for production line labeling and/or coding. Units covered under this category normally are located in commercial or industrial environments. This equipment may be cord connected or have provision for field wiring. The units are marked with the type or types of ink for which they have been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Ink Jet Coding Machine
Ink Jet Marking Machine
Laser Coding Machine
Laser Marking Machine
Marking and Coding Equipment

RELATED PRODUCTS

Printing equipment intended for use in other applications is covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ) or Graphic Arts Equipment (KCQT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1950, "Safety of Information Technology Equipment, Including Electrical Business Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Marking and Coding Equipment," "Ink Jet Coding Machine," "Ink Jet Marking Machine," "Laser Coding Machine" or "Laser Marking Machine."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MATTRESSES AND PADS, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (PHLV)

USE

This category covers mattresses and pads provided with a sheet covering made of cotton material coated with an electrically conductive natural or synthetic rubber, and intended for use in flammable anesthetizing locations where it is necessary for safety to avoid the accumulation of static electricity.

Tests indicate that the electrical resistance conforms to ANSI/NFPA 99, "Health Care Facilities Code," and that the mattresses and pads, when in contact with grounded objects, will prevent accumulation of dangerous amounts of static electrical charges.

As oil is injurious to rubber compounds and impairs the electrical conductive properties of these materials, contact with oil should be avoided.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Electrically Conductive Mattress Relating to Hazardous Locations
Electrically Conductive Pad Relating to Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1067, "Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrically Conductive Mattress Relating to Hazardous Locations" or "Electrically Conductive Pad Relating to Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEASURING, TESTING AND SIGNAL-GENERATION EQUIPMENT (PICQ)

GENERAL

This category covers equipment that generates electrical signals (transducers, waveform generators, and the like) or that measures, indicates and/or records electrical or nonelectrical signals, quantities, or other parameters generated by other equipment.

This equipment may incorporate circuits used to visually and audibly indicate various wiring conditions in 15 or 20 A branch circuits along with markings or instructions to identify the probable wiring conditions which cannot be determined by the tester.

The devices may include provisions for checking the functions of a ground-fault circuit interrupter (GFCI) connected to the branch circuit, or for indicating that a branch circuit is connected to an arc-fault circuit interrupter (AFCI).

AFCI indicators operate by producing a waveform similar to an arc fault. Since these devices cannot produce an actual arc fault, an AFCI indicator may not trip every AFCI. AFCI indicators are provided with markings or instructions that state the following or equivalent: "CAUTION: AFCIs rec-

MEASURING, TESTING AND SIGNAL-GENERATION EQUIPMENT (PICQ)

ognize characteristics unique to arcing, and AFCI indicators produce characteristics that mimic some forms of arcing. Therefore the indicator may provide a false indication that the AFCI is not functioning properly. If this occurs, recheck the operation of the AFCI using the test and reset buttons. The AFCI button test function will demonstrate proper operation.”

Equipment intended to be installed only in process control panels is so identified.

Equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

Open-type measuring, testing and signal generation equipment is not provided with a complete enclosure and is intended to be placed in an industrial control panel or similar type of enclosure.

FACTORS NOT INVESTIGATED

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically certified in the individual certifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Measuring and Testing Equipment
- Measuring Equipment
- Open-type Measuring and Testing Equipment
- Open-type Measuring Equipment
- Open-type Signal-generation Equipment
- Open-type Testing Equipment
- Signal-generation Equipment
- Testing Equipment

Other product identities may be used as shown in the individual certifications, or combinations of the product identities.

RELATED PRODUCTS

This category does not cover medical and dental or process control metering and testing equipment. Certifications of equipment which measures the functional performance (nonelectrical or nonelectronic) of other equipment, the physical or chemical properties of materials or qualitative or quantitative constituent analysis of materials and preparation of materials for further analysis or measurement are covered under Laboratory Use Electrical Equipment (OGTK).

Additional certifications are covered under Electrical and Electronic Measuring and Testing Equipment (FHCW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 61010B-1, “Electrical Measuring and Test Equipment – Part 1: General Requirements,” or ANSI/UL 61010-1, “Electrical Equipment for Measurement, Control and Laboratory Use – Part 1: General Requirements,” and IEC 61010-2-032, “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-032: Particular Requirements for Hand-Held and Hand-Manipulated Current Sensors for Electrical Test and Measurement,” as applicable.

Equipment incorporating circuits to indicate wiring conditions in branch circuits, GFCI functions, or to indicate that a branch circuit is connected to an AFCI is additionally investigated to UL 1436, “Outlet Circuit Testers and Similar Indicating Devices.”

Some products covered under this category have also been investigated to Levels I, II, III and/or IV of Annexes A and B of Performance Specification TSB-155, “Transmission Performance Specifications for Field Testing of Unshielded Twisted-Pair Cabling Systems.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

For those products which are also certified by UL to Annexes A and B of Performance Specification TSB-155, the statement “ALSO CERTIFIED TO LEVEL(S) * OF TSB-155” is included on the product.

* I, II, III and/or IV

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Measuring and Testing Equipment,” “Measuring Equipment,” “Testing Equipment,” “Signal Generation Equipment,” or the name

MEASURING, TESTING AND SIGNAL-GENERATION EQUIPMENT (PICQ)

of the specific type of product as shown in the individual Listings, or combinations of the preceding identities. The product name may be preceded by the words “Open-type.”

Combination Listing/Verification Mark — A Listing Mark combined with a Verification Mark is provided on products that have additionally been investigated to Levels I, II, III and/or IV of Annexes A and B of Performance Specification TSB-155. The combined Listing/Verification Mark consists of the Listing Mark elements detailed above and the statement “ALSO VERIFIED IN ACCORDANCE WITH LEVEL(S) * OF TSB-155.”

* I, II, III and/or IV

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEASUREMENT EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (PICX)

GENERAL

This category covers equipment intended for measuring physical properties, such as thickness and density, on a production line.

This equipment has been investigated for risk of explosion, fire and electric shock only.

PRODUCT IDENTITY

The following product identity appears on the product:

Measurement Equipment for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, “Industrial Control Equipment.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MEASUREMENT EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS

AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDICAL EQUIPMENT (PIDF)

USE AND INSTALLATION

This category covers equipment intended to diagnose, treat, or monitor a patient under medical supervision, and which makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category also covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

PRODUCT CATEGORIES BY CATEGORY CODE

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer.

This equipment has been certified with respect to electric shock, fire, mechanical and other specified hazards incident to its use in unclassified locations. The other specified hazards are those that are included in UL 60601-1 (formerly UL 2601-1) and the Particular and/or Collateral Standards to which the equipment has been investigated.

The wiring methods for installation of these products are covered by Article 517 of ANSI/NFPA 70, "National Electrical Code" (NEC). The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in the NEC.

The nature of some of this equipment, such as X-ray, nuclear imaging, and magnetic resonance equipment, is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and, in all cases, be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

X-radiation safety and performance requirements are regulated under Public Law 90-602 and are enforced by the U.S. Department of Health and Human Services. These criteria are outlined in Code of Federal Regulations, Title 21, Parts 1000 to 1999. Compliance with the applicable regulations under the conditions of normal and abnormal operation has not been investigated by UL.

Some of the Medical Equipment certifications are predicated on the provision of one of two alternate attachment plugs specifically referred to in Attachment Plugs, Fuseless (AXUT). One is a locking type identified by the marking "Hospital Only" and the other is a nonlocking type ANSI Standard configuration grounding type identified by the marking "Hospital Grade" and a green dot on the body. The identification is visible after installation on the flexible cord.

Baby incubators and similar equipment for use with oxygen-enriched atmospheres have been investigated with respect to the increased hazard resulting from the presence of oxygen and electrical parts within the equipment. Motor-operated beds are marked if they are suitable for use with oxygen.

Oil bath sterilizers and similar equipment have been investigated with respect to their use with oils such as are recommended by the sterilizer manufacturer.

Individual components of the end products in this category have been investigated to applicable UL component requirements. Also, investigation of components to applicable international component requirements has been performed by UL or other appropriate certifying agency (as determined by UL). UL Follow-Up Service at the end-product manufacturing facility also determines that such components continue to bear the appropriate designated certifying agency's mark.

REBUILT PRODUCTS

This category also covers medical equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt medical equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt medical equipment is subject to the same requirements as new medical equipment.

FIELD-INSTALLED EQUIPMENT

Products covered under this category include equipment intended to be field installed, in accordance with the instructions provided, to certified equipment of the same manufacturer. Field-installed equipment is appropriately marked as noted below.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, that may be produced by this equipment have not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Field-installed Medical Equipment
Medical Equipment

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Medical equipment that includes refrigerated components, such as refrigeration therapy equipment, is covered under Refrigerated Medical Equipment (SOPT).

Equipment investigated to determine its suitability for use in hazardous (classified) locations as defined in the NEC is covered under Medical Equipment for Use in Hazardous Locations (PINR).

For household health care equipment, see Personal Hygiene and Health Care Appliances (QGRZ).

For heating pads, see Heating Pads, Electric (MNUV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 60601-1 (formerly UL 2601-1), "Safety of Medical Electrical Equipment, Part 1: General Requirements." Note that although redesignated as UL 60601-1, UL 2601-1 is identical to UL 60601-1 except for formatting. Therefore, products identified as investigated to either standard are subject to identical technical requirements.

Particular Standards — UL 60601-1 contains requirements for safety which are generally applicable to all medical equipment. For certain types of equipment, these requirements are supplemented or modified by the special requirements of a Particular Standard (IEC 60601-2-XX). However, unless otherwise indicated in the deviations, the requirements of a Particular Standard do not modify the deviations. Where Particular Requirements exist, the General Standard is not used alone.

Collateral Standards — When the equipment falls within the scope of one or more Collateral Standards (IEC 60601-1-XX) such standard(s) may, optionally, also be used. Unless otherwise indicated in the deviations, the requirements of a Collateral Standard do not modify the deviations.

Product Marking (with respect to applicable standards) — As part of the Certification Mark, reference to UL 60601-1 and/or UL 2601-1 is included. For products that have been investigated to the applicable Particular (IEC 60601-2-XX) and/or Collateral (IEC 60601-1-XX) Standards, reference to these standards is made on the product or in the accompanying documents.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY IN ACCORDANCE WITH [standard*]

* Based on the certification coverage of the product, the standard may be UL 60601-1, UL 2601-1 or both, applicable Particular (IEC 60601-2-XX) and/or related Collateral (IEC 60601-1-XX) Standards for which the product has been found to comply by UL.

Alternate Marking Options

1. The Certification Mark includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), a file number, the phrase "SEE ACCOMPANYING DOCUMENTS" or "IEC 348, Symbol 14 Δ ," and the standard number*. At a minimum, the standard number* always includes UL 60601-1, UL 2601-1 or both. In addition, the product's accompanying documents will contain the complete Certification Mark as described above.
2. For products with limited space for markings, the Certification Mark includes the UL symbol, the words "CERTIFIED" and "SAFETY," and the IEC 348, Symbol 14 Δ . In addition, the product's accompanying documents will contain the complete Certification Mark as described above.
3. For products (such as implantable devices) where the Certification Mark is not feasible, the complete Certification Mark will appear on the carton or on the smallest unit container in which the product is packaged. The product's accompanying documents may also contain the complete Certification Mark as described above.

* Based on the certification coverage of the product, the standard may be UL 60601-1, UL 2601-1 or both, applicable Particular (IEC 60601-2-XX) and/or related Collateral (IEC 60601-1-XX) Standards for which the product has been found to comply by UL.

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MEDICAL EQUIPMENT+ WITH RESPECT TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY IN ACCORDANCE WITH [standard*] Control No.

+ or other appropriate product name as shown in the individual Classifications

For rebuilt or remanufactured products the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product name.

For field-installed products the words "Field Installed" precedes the product name.

Alternate Marking Options

1. The Classification Mark includes the UL symbol, the word "CLASSIFIED" above the UL symbol, the product name as described above, the phrase "SEE ACCOMPANYING DOCUMENTS," or the symbol of a triangle containing the exclamation point (IEC 348, Symbol 14 – \triangle), the standard number* and a control number. As a minimum, the standard number* always includes UL 60601-1, UL 2601-1 or both. In addition, the product's accompanying documents will contain the complete Classification Mark.
2. For products with limited space for markings, the Classification Mark includes the UL symbol, the word "CLASSIFIED" above the UL symbol, the symbol of a triangle containing the exclamation point (IEC 348, Symbol 14 – \triangle), and a control number. In addition, the product's accompanying documents will contain the complete Classification Mark.
3. For products (such as implantable devices) where the Classification Mark is not feasible, the complete Classification Mark will appear on the carton or smallest unit container in which the product is packaged. The product's accompanying documents may also contain the complete Classification Mark.

* Based on the certification coverage of the product, the standard may be UL 60601-1, UL 2601-1 or both, applicable Particular (IEC 60601-2-XX) and/or related Collateral (IEC 60601-1-XX) Standards for which the product has been found to comply by UL.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDICAL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (PINR)

GENERAL

This category covers portable suction, pressure and anesthesia units, portable baby incubators, surgical devices and similar equipment designed for professional use by attendants in hospitals. This equipment has been investigated solely from the standpoint of electrical, fire, explosion, and accident hazards. Other hazards, such as physiological effects, have not been investigated.

Except for low-voltage battery-powered devices, connections to supply lines require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, certified for the specified hazardous locations. The flexible cord connected to the units should be frequently inspected and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

These devices are intended for use in accordance with ANSI/NFPA 99, "Health Care Facilities Code."

PRODUCT IDENTITY

The following product identity appears on the product:

Medical Equipment for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medical Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDIUM-VOLTAGE POWER CABLE (PITY)

GENERAL

This category covers medium-voltage cable rated 2400 to 35,000 V intended for use and installation in accordance with Article 328 of ANSI/NFPA 70, "National Electrical Code" (NEC).

The cable is single or multiconductor, aluminum or copper, with solid extruded dielectric insulation and may have an extruded jacket, metallic covering or combination of both over the single conductors or over the assembled conductors in a multiconductor power cable.

All insulated conductors rated higher than 2400 V have electrostatic shielding. Cable rated 2400 V is nonshielded.

Nonshielded cable is intended for use where conditions of maintenance and supervision ensure that only competent individuals service and have access to the installation.

PRODUCT MARKINGS

Shielded cable is marked "MV-90" or "MV-105" and is suitable for use in wet or dry locations at 90 or 105°C.

Nonshielded cable is marked either "MV-90" indicating suitability for use in wet or dry locations at 90°C maximum, or "MV-90 Dry Locations Only" indicating suitability for use only in dry locations at 90°C maximum.

Cable marked "Oil Resistant I" or "Oil Resistant II" is suitable for exposure to mineral oil at 60°C or 75°C, respectively.

Cable marked "Sunlight Resistant" may be exposed to the direct rays of the sun.

Cable intended for installation in cable trays in accordance with Article 392 of the NEC is marked "For Use in Cable Trays" (or "For CT Use").

Cable with aluminum conductors is marked with the word "Aluminum" (or "AL").

The cable is marked with the conductor size, voltage rating and insulation level (100% or 133%).

PRODUCT IDENTITY

The following product identity appears on the product:

Medium-voltage Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1072, "Medium-Voltage Power Cables."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medium-Voltage Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDIUM-VOLTAGE CABLE CERTIFIED TO UL 1072, WITH METRIC CONDUCTOR SIZES (PIVW)

GENERAL

This category covers medium-voltage cable rated 2400 to 35,000 V and in conductor sizes 10 through 500 sq mm.

The cable complies with all requirements specified in ANSI/UL 1072, "Medium-Voltage Power Cables," except that metric conductor sizes are used instead of AWG sizes. The cable is for use in jurisdictions where metric conductor sizes are required or permitted.

370 MEDIUM-VOLTAGE CABLE CERTIFIED TO UL 1072, WITH METRIC CONDUCTOR SIZES (PIVW)

The cable is single or multi-conductor, aluminum or copper, with solid extruded dielectric insulation. An extruded jacket, metallic covering, or combination of both may be provided over single conductors or over the assembled conductors in a multi-conductor power cable.

All insulated conductors rated higher than 2400 V have electrostatic shielding. Cable rated 2400 V is nonshielded.

Nonshielded cable is intended for use where conditions of maintenance and supervision ensure that only competent individuals service and have access to the installation.

PRODUCT MARKINGS

Shielded cable is marked "MV-90" or "MV-105" and is suitable for use in wet or dry locations at 90°C or 105°C.

Nonshielded cable is marked either "MV-90" indicating suitability for use in wet or dry locations at 90°C maximum, or "MV-90 Dry Locations Only."

Cable marked "oil resistant I" or "oil resistant II" is suitable for exposure to mineral oil at 60°C or 75°C, respectively.

Cable marked "sunlight resistant" may be exposed to the direct rays of the sun.

Cable intended for installation in cable trays is marked "For CT Use" or "For Use In Cable Trays."

Cable with aluminum conductors is marked with the word "Aluminum" or the letters "AL."

Cable is marked with conductor size in sq mm, voltage rating and insulation level (100% or 133%).

PRODUCT IDENTITY

The following product identity appears on the product:

Medium-voltage Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1072, "Medium-Voltage Power Cables."

UL MARK

The Certification Mark of UL on the product, the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

UL 1072

WITH METRIC CONDUCTOR SIZES

Alternate UL Mark

The Classification Mark of UL on the product, the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products shall only be as illustrated below:

MEDIUM VOLTAGE CABLE

**CLASSIFIED BY UNDERWRITERS LABORATORIES INC®
IN ACCORDANCE WITH UL 1072, WITH METRIC
CONDUCTOR SIZES**

No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METAL-CLAD CABLE (PJAZ)

GENERAL

This category covers Type MC metal-clad cable. The cable is rated for use up to 2000 V, and certified in sizes 18 AWG through 2000 kcmil for copper, 12 AWG through 2000 kcmil for aluminum or copper-clad aluminum, and employs thermoset or thermoplastic insulated conductors. It is intended for installation in accordance with Article 330 of ANSI/NFPA 70, "National Electrical Code" (NEC).

The cable consists of one or more insulated circuit conductors, a grounding path (grounding conductor, metal sheath, or combination thereof) as described below, one or more optional optical fiber members, and an overall metal sheath. The metal sheath is an interlocked metal tape, a corrugated metal tube, or a smooth metal tube. The metal sheath of single-conductor cable is nonferrous. A nonmetallic jacket may be provided under and/or over the metal sheath. Cable with metal armor, rated 2400 to 35,000 V is covered under Medium-voltage Power Cable (PITY) and is marked "Type MV or MC."

Cable with interlocked armor that has been determined to be suitable for use as a grounding means has interlocked aluminum or steel armor in

METAL-CLAD CABLE (PJAZ)

direct contact with a single, full-sized, bare aluminum grounding/bonding conductor. This cable is marked to indicate that the armor/grounding conductor combination is suitable for ground. The equipment grounding conductor required within all other cable with interlocked armor may be insulated or bare, may be sectioned, and is located in the cable core but not in contact with the armor. Any additional grounding conductors of either design have green insulation. One insulated grounding conductor may be unmarked, one other may have only a yellow stripe and the balance have surface markings that indicate they are additional equipment grounding conductors or isolated grounding conductors.

The sheath of the smooth or corrugated tube Type MC cable or a combination of the sheath and a supplemental bare or unstriped green insulated conductor is suitable for use as the ground path required for equipment grounding. The supplemental grounding conductor may be sectioned. When sectioned, all sections are identical. Each additional green insulated grounding conductor has either a yellow stripe or a surface marking or both to indicate that it is an additional equipment or isolated grounding conductor. Additional grounding conductors, however marked, are not smaller than the required grounding conductor.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and AWG size is shown either on a marker tape under the armor or on the surface of a nonmetallic jacket, if used.

Copper-clad aluminum conductors are surface printed "AL (CU-CLAD)" or "Cu-clad AL." Aluminum conductors are surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Cable suitable for use in cable trays, direct sunlight or direct burial application is so marked. Cable marked for direct burial is also considered acceptable for encasement in concrete.

Cable marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is marked "Oil Resistant II" (or "Oil Res II").

Cable containing one or more optical fiber members is marked "MC-OF."

Cable with a nonmetallic outer jacket that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," and all unjacketed metal-clad cable may be marked with the suffix "-LS."

Cable with an interlocked armor that is intended as a ground path is marked "armor is grounding path component," and is provided with installation instructions.

Cable intended for use in hazardous (classified) locations, Class I, Division 1, Groups A, B, C and D; Class II, Division 1, Groups E, F and G; Class I, Zone 1, Groups IIA, IIB and IIC in accordance with the NEC, is marked "MC-HL." See Cable for Use in Hazardous Locations (PJPP) for Certification Mark requirements for cable marked "MC-HL."

PRODUCT IDENTITY

One of the following product identities appears on the product:

Metal-clad Aluminum Cable (for metal-clad cable that contains aluminum conductors)

Metal-clad Cable (for metal-clad cable that contains copper or copper-clad aluminum conductors)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1569, "Metal-Clad Cables."

Cable marked "MC-HL" has been additionally investigated to ANSI/UL 2225, "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark

for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-clad Cable"; metal-clad cable that contains aluminum conductors has the product name "Metal-clad Aluminum Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METAL-CLAD CABLE CONNECTORS, TYPE MC (PJOX)

GENERAL

This category covers fittings for use with metal-clad cable, Type MC, employing (a) interlocking aluminum or steel tape, (b) interlocking aluminum or steel armor ground cable, (c) smooth aluminum tube, or (c) corrugated aluminum or copper tube. The interlocking aluminum or steel armor ground cable is intended for use as a ground and is marked "Armor is equipment grounding path component." This product is intended for installation and use in accordance with the following information and the limitations specified in Metal-clad Cable (PJAZ).

All male threaded fittings have only been investigated for use with lock-nuts.

Connector Selection — Connectors are intended to be selected in accordance with the size and type of cable for which they are designated. Bronze connectors are intended for use only with cable employing corrugated copper tube. Aluminum connectors are intended for use only with cable employing corrugated aluminum, interlocking aluminum or smooth aluminum tube, unless marked otherwise on the carton (see **PRODUCT MARKINGS** below).

Use in Concrete — Fittings made of aluminum are not considered suitable for use in concrete or cinder fill unless protected with asphalt paint or the equivalent. Fittings suitable for use in concrete are identified by a marking on the carton.

Grounding — Metal-clad-cable connector and cable combinations in the following table are suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code."

Cable	Connector Type
Interlocking aluminum or steel armor ground cable	MCIA
Corrugated aluminum or copper tube	MCC
Smooth aluminum tube	MCS

Connector types are specifically identified on the manufacturer's product or on the smallest unit container in which the product is packaged.

Dry and Wet Locations — Nonmetallic parts, such as glands or seals, are suitable for use at a temperature of 90°C in dry and wet locations. The fittings are suitable for use in dry or wet locations unless marked otherwise (see **PRODUCT MARKINGS** below).

Use with Armored Cable — Metal-clad-cable connectors also suitable for use with armored cable, Type AC, are so marked on the device or carton. Certified armored cable, Type AC, is covered under Armored Cable Connectors, Type AC (AWSX).

Use with Flexible Metal Conduit — Metal-clad-cable connectors also suitable for use with flexible metal conduit, Types FMC, RWFC and XRWFMC, are so marked on the device or carton. Certified flexible metal conduit connectors, Types FMC, RWFC and XRWFMC, are covered under Conduit Fittings (DWTI).

Reusability — Connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

PRODUCT MARKINGS

Metal-clad-cable fittings or the smallest unit shipping cartons are marked with (1) the range of cable diameters and the type of cable sheath (corrugated, interlocking or smooth), (2) the material of the sheath (aluminum, copper or steel) for which they have been investigated, (3) "Concrete-tight" if suitable for use in poured concrete, (4) "For Type AC Cable" (or equivalent wording) if suitable for that use, and (5) "For FE or AL (unless for use with both) FMC, RWFC or XRWFMC" (or equivalent wording). See the following table for additional carton markings. Metal-clad-cable fittings suitable for use only in dry locations are marked "Dry Locations" on the device and smallest unit carton.

Type of Metal-clad Cable	Abbreviation
Metal-clad interlocking armor cable	MCI
Metal-clad interlocking armor ground cable	MCI-A
Metal-clad continuous smooth sheath armor cable	MCS
Metal-clad continuous corrugated sheath armor cable	MCC
Metal-clad continuous corrugated sheath armor cable, flat	FLAT

PRODUCT IDENTITY

The following product identity appears on the product:
Metal-clad (Type MC) Cable Connector

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings." Products not identified with a specific standard reference are investigated to the 6th ed. (issued July 13, 2012; last revised June 4, 2014). All other products are identified by the specific standard/edition/date in the individual certifications.

UL MARK

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metal-clad (Type MC) Cable Connector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METAL-CLAD CABLE CERTIFIED TO UL 1569, WITH METRIC CONDUCTOR SIZES (PJPJ)

GENERAL

This category covers Type MC metal-clad cable. It is rated for use up to 2000 V, and certified in sizes 1.5 through 35 sq mm copper, 4.0 through 35 sq mm aluminum or copper-clad aluminum and employs thermoset or thermoplastic insulated conductors.

The cable complies with all the requirements specified in UL 1569, "Metal-Clad Cables," except that metric conductor sizes are used instead of AWG/kcmil sizes. This cable is for use in jurisdictions where metric conductor sizes are required or permitted.

Type MC cable is of three designs (a) interlocked metal tape, (b) corrugated tube and (c) smooth tube, and all are intended for aboveground use except when marked for direct burial.

The armor of the interlocked metal tape type may or may not be used for grounding. Interlocked armor constructions that may be used as a ground path have a grounding/bonding conductor outside the cable core and in direct contact with the armor. Interlocked armor constructions that are not intended as a ground path have a grounding conductor inside the cable core and not in contact with the armor. The tube of corrugated or smooth tube Type MC Cable in combination with the equipment grounding conductor, when provided, is suitable for grounding; otherwise the tube by itself is suitable for grounding.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and sq mm size is shown either on a marker tape under the armor or on the surface of a nonmetallic jacket, if used.

Copper-clad aluminum conductors are surface printed "AL (CU-CLAD)" or "Cu-Clad Al." Aluminum conductors are surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

METAL-CLAD CABLE CERTIFIED TO UL 1569, WITH METRIC CONDUCTOR SIZES (PJPJ)

372

Cable suitable for use in cable trays, direct sunlight or direct burial application is so marked.

Cable marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is marked "Oil Resistant II" (or "Oil Res II").

Cable with an interlocked armor that is intended as a ground path is marked "armor is grounding path component," and is provided with installation instructions.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Metal-clad Aluminum Cable (for metal-clad cable that contains aluminum conductors)

Metal-clad Cable (for metal-clad cable that contains copper or copper-clad aluminum conductors)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1569, "Metal-Clad Cable."

UL MARK

The Certification Mark of UL on the product, the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**UL 1569
WITH METRIC CONDUCTOR SIZES
Alternate UL Mark**

The Classification Mark of UL on the product, the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products shall only be as illustrated below using the appropriate product name: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-Clad Cable"; metal-clad cable that contains aluminum conductors has the product name "Metal-Clad Aluminum Cable."

**[PRODUCT NAME]
CLASSIFIED BY UNDERWRITERS LABORATORIES INC.
IN ACCORDANCE WITH UL 1569, WITH METRIC
CONDUCTOR SIZES
No.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE FOR USE IN HAZARDOUS LOCATIONS (PJPP)

GENERAL

This category covers Type MC-HL metal-clad cable and Type ITC-HL instrumentation tray cable for use in Class I and II hazardous (classified) locations in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers Type TC-ER-HL tray cable for use in Class I, Zone 1, Groups IIA, IIB and IIC hazardous (classified) locations in accordance with the NEC.

Type MC-HL cable is rated up to 35,000 V, and certified in sizes 18 AWG through 2000 kcmil for copper, 12 AWG through 2000 kcmil for aluminum, or copper-clad aluminum, and employs thermoset- or thermoplastic-insulated conductors. It is intended for installation in accordance with Articles 330, 501 502 and 505 of the NEC. Cable containing conductors rated 2 kV may be used in circuits operating at 2 kV, nominal or less, in accordance with Articles 600 and 490 of the NEC. Cable containing conductors rated 5,000 to 35,000 V is intended for installation and use in accordance with Articles 328, 501, 502 and 505 of the NEC.

Type MC-HL cable consists of two or more insulated conductors, one or more grounding conductors, and an overall gas/vapor tight continuous corrugated metallic sheath. A nonmetallic jacket is provided over the metal sheath.

The equipment grounding conductor required within Type MC-HL cable may be insulated or bare and may be sectioned. Any additional grounding conductors have green insulation.

CABLE FOR USE IN HAZARDOUS LOCATIONS (PJPP)

Type ITC-HL cable is rated for use on circuits up to 150 V and 5 A. The conductors are size 22 AWG through 12 AWG copper or thermocouple alloy with thermoset or thermoplastic insulation. The cable is intended for installation in accordance with Articles, 501, 502, 505 and 727 of the NEC.

Type ITC-HL cable consists of two or more insulated conductors, with an overall gas-/vapor-tight continuous corrugated metallic sheath and with nonmetallic jackets both under and over the metal sheath. An equipment-grounding conductor may be provided within a Type ITC-HL cable and may be insulated or bare.

Type TC-ER-HL cable is rated for 600 V nominal. Overall cable diameters are 25 mm (1 inch) or less. At least one copper equipment grounding conductor is provided and it is sized in accordance with the grounding conductor tables in Section 8 of ANSI/UL 1277, "Electrical Power and Control Tray Cables with Optional Optical-Fiber Members."

Type TC-ER-HL cable is for use as exposed runs between a cable tray and utilization equipment where the cable is continuously supported and protected against physical damage using mechanical protection such as struts, angles or channel in accordance with 336.10(7) and 505.15(B)(1)(i) and as permitted in 501.10(A)(2) of the NEC.

Field-wiring conductors are intended to be copper for type of protection "e," in accordance with 505.18(A) of the NEC.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and AWG size is shown on the surface of a nonmetallic jacket. The cable is marked as described in Metal-clad Cable (PJAZ), Power and Control Tray Cable (QPOR) or Instrumentation Tray Cable (NYTT), except the suffix "-HL" follows "MC," "TC-ER" or "ITC."

PRODUCT IDENTITY

One of the following product identities appears on the product:

Metal-clad Aluminum Cable for Use in Hazardous Locations (for metal-clad cable that contains aluminum conductors)

Metal-clad Cable for Use in Hazardous Locations (for metal-clad cable that contains copper or copper-clad aluminum conductors)

Instrumentation Tray Cable for Use in Hazardous Locations (for metal-clad cable that contains aluminum conductors)

Type TC-ER-HL Tray Cable for Use in Hazardous Locations

RELATED PRODUCTS

See Cable Fittings for Use in Hazardous Locations (CYMX) and Cable Fittings for Use in Class I, Zone Classified Hazardous Locations (CYMJ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1569, "Metal-Clad Cables," ANSI/UL 2250, "Instrumentation Tray Cable," ANSI/UL 1277, "Electrical Power and Control Tray Cables with Optional Optical-Fiber Members," and UL 2225, "Metal-Clad Cables and Cable-Sealing Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-clad Cable for Use in Hazardous Locations"; metal-clad cable that contains aluminum conductors has the product name "Metal-clad Aluminum Cable for Use in Hazardous Locations," "Type TC-ER-HL Tray Cable for Use in Hazardous Locations" or "Instrumentation Tray Cable for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER-MOUNTING EQUIPMENT (PJSR)

This category covers meter-mounting equipment, which consists of an enclosure, wiring terminals and provision for fastening the meter to the

equipment. Meter-mounting equipment does not include a meter, overcurrent devices, instrument transformers, arcing or switching parts, or the like. A meter socket may include provisions for installation of current transformers within the meter socket enclosure.

Meter-mounting equipment is marked with a continuous amp rating and may, in addition, have a maximum use (intermittent) amp rating of not more than 125% of the continuous amp rating. Meter-mounting equipment accommodating two or more meters is marked with a continuous current line bus rating (may also be referred to as an overall assembly rating) and may, in addition, have an overall maximum use (intermittent) line bus rating (or overall assembly rating) of not more than 125% of the continuous line bus rating.

This equipment is intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is on a wiring diagram or other readily visible location and is independent of any marking on a terminal connector unless the terminal connector is an integral, nonremovable part of the meter socket jaw.

Wire connectors in Listed meter-mounting equipment are intended to accommodate one conductor only unless use with more than one conductor is clearly indicated on the wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 75°C ampacities for wire as specified in Table 310.15(B)(16) of ANSI/NFPA 70, "National Electrical Code" (NEC). However, 3-wire, single-phase service entrance or feeder conductors for dwelling units may be as covered in Section 310.15(B)(7) of the NEC. Termination provisions are determined based on values provided in Table 310.15(B)(16) or Section 310.15(B)(7), with no adjustment made for correction factors.

Meter-mounting equipment is marked with the enclosure type described in Electrical Equipment for Use in Ordinary Locations (AALZ).

A post-mounted meter socket, having an open bottom for the entry of underground conductors, is provided with:

- A marking showing the final grade level, which should be no less than 2 ft (0.6 m) above the lower end of the enclosure for a self-supported post and 18 in. (457 mm) for a separately supported post, and
- Instructions for setting the post in concrete or for securing to other mounting support.

A pedestal-mounted meter socket is intended to be mounted on a concrete base through which the underground conductors enter the enclosure by means of conduit. Mounting pedestals constructed of a coated aluminum base are provided with recommended installation procedures to avoid damage to the pedestal.

Meter-mounting equipment with a mounting post or pedestal either has ventilation to inhibit condensation or is provided with instructions for the use of sealing facilities.

Unless marked otherwise, meter-mounting equipment with a post or pedestal is not intended to serve as the sole support of a mast for overhead wiring.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER FITTINGS (PJVV)

GENERAL

This category covers meter fittings, which are designed to accommodate bolt-in type watt-hour meters and similar meters.

Ratings of certified meter fittings are limited to 600 V ac maximum and 400 A maximum.

Meter fittings are marked with their short-circuit current rating in rms symmetrical amps. For short-circuit ratings exceeding 10 kA rms symmetrical, the marking includes the type and rating of overcurrent protection to be used with the meter fitting.

PRODUCT IDENTITY

The following product identity appears on the product:
Meter Fitting

ADDITIONAL INFORMATION

For additional information, see Meter-mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Meter Fittings (PJVV)—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter Fitting."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER-SOCKET BASES (PJWT)

GENERAL

This category covers meter-socket bases, which are bases intended to accommodate plug-in-type watt-hour and similar meters rated for use with current transformers. They are designed to be installed, with the meter, inside enclosures to allow for connection in accordance with ANSI/NFPA 70, "National Electrical Code."

Meter-socket bases are rated 600 V ac maximum. Meter-socket bases rated over 30 A are marked with their short-circuit-current rating in rms symmetrical amps. For short-circuit-current ratings exceeding 10 kA, the marking includes the type and rating of overcurrent protection to be used with the meter socket.

Meter-socket bases are marked with a continuous amp rating and may, in addition, have a maximum use (intermittent) rating of not more than 125% of the continuous amp rating.

PRODUCT IDENTITY

The following product identity appears on the product:
Unenclosed Meter Socket

RELATED PRODUCTS

Meter sockets with meters protruding through the enclosure are covered under Meter Sockets (PJYZ).

ADDITIONAL INFORMATION

For additional information, see Meter-mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark UL MARK

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unenclosed Meter Socket."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METERING TRANSFORMER CABINETS (PJXS)

GENERAL

This category covers metering transformer cabinets, which consist of an enclosure and provisions for accommodating current transformers. They do not include the current transformers. They may have provision for the mounting of plug-in-type watt-hour meters. They may also include wiring terminals and buses to accommodate bus-type current transformers.

Metering transformer cabinet interiors are intended for field installation into enclosures. Unless marked for use in a specific enclosure, wiring space has not been investigated.

Ratings of certified metering transformer cabinets and interiors are limited to 600 V ac maximum and 6000 A maximum.

Metering Transformer Cabinets (PJXS)—Continued

Metering transformer cabinets intended for use with specific metering transformer cabinet interiors and the interiors themselves are marked with their short-circuit-current rating in rms symmetrical amps.

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metering Transformer Cabinet" or "Metering Transformer Cabinet Interior."

METER SOCKETS (PJYZ)

GENERAL

This category covers meter sockets, which are complete enclosures accommodating plug-in-type watt-hour and similar meters. They provide terminating means for conductors of wiring systems recognized by ANSI/NFPA 70, "National Electrical Code."

The tightening torque required for terminal screws is specified by a marking.

Terminal-wire connectors may be omitted and, if omitted, a marking specifies which connectors are intended to be used. Instructions for the field installation of connectors are provided with the connectors.

Meter sockets are suitable for supply wiring to enter the enclosure from either the top or the bottom, unless the meter socket is marked "Overhead Feed Only" or "Underground Feed Only," or the equivalent. The marking "Top Feed" is considered equivalent to "Overhead Feed," and "Bottom Feed" is considered equivalent to "Underground Feed."

The ratings of these meter sockets are limited to 600 V ac maximum and to 400 A maximum through any one meter.

Meter sockets rated over 30 A are marked with their short-circuit-current rating in rms symmetrical amps. For short-circuit-current ratings exceeding 10 kA, the marking includes the type and rating of overcurrent protection to be used with the meter socket.

Meter sockets are marked with a continuous amp rating and may in addition have a maximum use (intermittent) amp rating of not more than 125% of the continuous amp rating.

METER-SOCKET ACCESSORIES (PKAX)

GENERAL

The category covers accessories intended for use with meter sockets, such as jumper covers, meter-socket extenders or other equipment.

Ratings of certified meter-socket accessories are limited to 600 V ac and 400 A maximum.

Meter-socket accessories are only considered suitable for use in meter sockets with a short-circuit-current rating not exceeding 10 kA rms symmetrical, unless the accessory is otherwise marked.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Meter-socket Accessory
- Meter-socket Extender
- Temporary Jumper Cover Accessory

Other product identities may be used as shown in the individual certifications.

METER-SOCKET ADAPTERS FOR COMMUNICATIONS EQUIPMENT (POBN)

GENERAL

This category covers wireline and wireless communications equipment, and power supplies powering such equipment, installed in a meter-socket adapter. These devices may be connected on the line side of the service disconnect in accordance with Section 230.82(9) of ANSI/NFPA 70, "National Electrical Code." These devices are associated with network communications equipment powered at the premises and may also be associated with Smart Grid applications. Equipment may be provided with one- or two-way communication, by means of power-line carrier signals, telephone, cable, wireless communication, or other methods. This equipment may additionally provide signals for the control of electrical loads or electrical power generation equipment in response to signals received from the utility or local communication networks.

Meter-socket adapters for communications equipment do not include a meter and do not perform the function of metering utility power for the purpose of revenue billing, but may be used for the communication of such information. This category does not cover the performance characteristics associated with the transmission of metering data.

Meter-socket adapters for communications equipment do not include overcurrent devices for the electrical service. Overcurrent protection is provided

METER-SOCKET ADAPTERS FOR COMMUNICATIONS EQUIPMENT (POBN)

for the communications equipment. A means to disconnect the communications equipment from the supply is provided as either an integral part of the equipment, or the communications equipment is disconnected from the source by removal of the meter.

Ratings for that portion of the adapter associated with the incoming power circuit are limited to 600 V ac and 400 A maximum. Adapters are marked with a continuous-current rating for the power circuit and may, in addition, have a maximum use (intermittent) current rating of not more than 125% of the continuous-current rating. Adapters rated over 30 A are marked with their short-circuit-current rating in rms symmetrical amperes and the maximum voltage rating for each marked short-circuit-current rating. Adapters rated 30 A or less (intended for use with current transformers) are not required to be marked with a short-circuit-current rating.

Meter-socket adapters for communications equipment are only considered suitable for use in meter sockets with a short-circuit-current rating not exceeding 10 kA rms symmetrical, unless the device is otherwise marked.

Devices suitable for outdoor use are so marked.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Meter-socket Adapter for Comm Equip
- Meter-socket Adapter for Communications Equipment

RELATED PRODUCTS

Meter sockets and related accessories are covered under Meter Sockets (PJYZ) and Meter-socket Accessories (PKAX).

Meter-socket bases are covered under Meter-socket Bases (PJWT).

Incomplete assemblies intended for use in other equipment to provide for the mounting of watt-hour meters are covered under Meter-socket Bases and Associated Assemblies (POCQ2).

Meter fittings are covered under Meter Fittings (PJVV).

Electric utility meters are covered under Meters, Electric Utility (POCZ).

Meters and other equipment for metering of electricity, other than Type A and Type S meters, are covered under Energy Usage Monitoring Systems (FTRZ).

Metering transformer cabinets are covered under Metering Transformer Cabinets (PJXS).

Energy management equipment that does not include electric metering is covered under Management Equipment, Energy (PAZX).

Type 1 surge-protective devices intended for installation on the line side of the service disconnect in meter-socket enclosures or adapters are covered under Surge-protective Devices (VZCA).

Transfer switches intended for mounting in a meter base, on the line side of the service disconnect switch, are covered under Meter-mounted Transfer Switches (WPXW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets," in addition to the requirements contained in UL Subject 2745, "Outline of Investigation for Meter Socket Adapters for Communications Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter-socket Adapter for Communications Equipment" (or "Meter-socket Adapter for Comm Equip").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METERS, ELECTRIC UTILITY (POCZ)

USE AND INSTALLATION

This category covers electric utility meters that measure, monitor, record, transmit, or receive electrical energy generation or consumption information. The primary function of these devices is to monitor energy consumption for the purpose of revenue metering.

Meters covered under this category include detachable (Type S) meters and nondetachable bottom-connected (Type A) meters. Plug-in-type meters

METERS, ELECTRIC UTILITY (POCZ)

are intended for installation in meter sockets, meter-socket bases, metering transformer cabinets, or other equipment (such as panelboards) incorporating provisions for plug-in-type meters.

These devices may communicate with other devices by means of power-line carrier, satellite/radio frequency, telephone, cable or other means.

Communication may be one- or two-way communication. One-way communication is typically for the purposes of data collection and/or reporting, including automated meter reading (AMR) capability. Two-way communication is typically used as part of an advanced metering infrastructure (AMI), which may include signaling other equipment in the infrastructure to take some action in response to electrical demand. This category does not cover any portion of the AMI other than the meter.

The ratings of equipment in this category are limited to 600 V ac maximum, with a maximum of 400 A through any one meter.

These meters are intended for installation in unclassified locations. These meters may or may not be under the exclusive control of the serving electric utility.

PRODUCT IDENTITY

The following product identity appears on the product:

- Electric Utility Meter

RELATED PRODUCTS

Meter-mounting equipment is covered under the following categories:

- Meter Sockets (PJYZ)
- Meter-socket Bases (PJWT)
- Metering Transformer Cabinets (PJXS)
- Meter Fittings (PJVV)

Energy management equipment that does not include electric metering is covered under Management Equipment, Energy (PAZX).

Meters and other equipment for metering of electricity, other than Type A and Type S meters, are covered under Energy Usage Monitoring Systems (FTRZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2735, "Electric Utility Meters."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Utility Meter."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MICROWAVE AND CABLE COMMUNICATION EQUIPMENT (POFV)

This category covers microwave communication equipment, cable communication equipment, communication antennas and antenna positioning equipment intended for household or commercial use.

This equipment has been investigated with respect to risk of fire, electric shock and personal injury. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury have included only the equipment specifically noted in the individual Listings.

Video tape recorders, video cameras and related accessories are covered under Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRODUCT CATEGORIES BY CATEGORY CODE

**MICROWAVE COMMUNICATION EQUIPMENT
CERTIFIED FOR USE IN SPECIFIED
EQUIPMENT (POVJ)**

USE AND INSTALLATION

This category covers retrofit kits consisting of parts intended for field installation in microwave communication equipment. These products have been investigated to determine that when installed in accordance with the manufacturer's instructions they do not adversely affect the operation of the specified equipment. The installation instructions accompanying each kit provide the information identifying the specific equipment into which the kit may be installed.

ADDITIONAL INFORMATION

For additional information, see Microwave and Cable Communication Equipment (POFV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1409, "Low-Voltage Video Products Without Cathode-Ray-Tube Displays."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**MICROWAVE COMMUNICATION EQUIPMENT RETROFIT KIT
FOR INSTALLATION IN SPECIFIED MICROWAVE COMMUNICATION
EQUIPMENT
IDENTIFIED IN THE MANUFACTURER'S INSTALLATION
INSTRUCTIONS**

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**MICROWAVE COMMUNICATION EQUIPMENT RETROFIT KIT
FOR INSTALLATION IN SPECIFIED MICROWAVE COMMUNICATION
EQUIPMENT
IDENTIFIED IN THE MANUFACTURER'S INSTALLATION
INSTRUCTIONS**

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MINERAL-INSULATED CABLE
ASSEMBLIES FOR USE IN
HAZARDOUS LOCATIONS (POWD)**

GENERAL

This category covers lengths of certified mineral-insulated metal-sheathed cable with one or both ends factory terminated with a certified mineral-insulated cable fitting. The fittings provide threaded connection of the cable to hazardous locations equipment.

PRODUCT IDENTITY

The following product identity appears on the product:
Mineral-insulated Cable Assembly for Use in Hazardous Locations
Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product, or the Certification Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Ser-

vice. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Cable Assembly for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MINERAL-INSULATED CABLE
FITTINGS FOR USE IN HAZARDOUS
LOCATIONS (POWX)**

GENERAL

This category covers termination fittings for providing threaded connection of mineral-insulated cable to hazardous locations equipment.

These fittings are provided with a screw-on pot for sealing ends of cable with a special compound supplied by the manufacturer of fittings and a connector having conduit threads for attachment to hazardous locations equipment.

PRODUCT IDENTITY

The following product identity appears on the product:
Mineral-insulated Cable Fitting for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product, or the Certification Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Cable Fitting for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MINERAL-INSULATED METAL-
SHEATHED CABLE (PPKV)**

GENERAL

This category covers mineral-insulated (Type MI) metal-sheathed cable, which consists of one or more solid copper conductors insulated with highly compressed magnesium oxide and enclosed in a continuous copper or alloy steel sheath, with or without a nonmetallic jacket. It is intended for use in accordance with Article 332 of NFPA 70, "National Electrical Code." Cable rated 600 V is labeled in sizes 16 AWG to 500 kcmil single conductor, 16 to 4 AWG two and three conductor, 16 to 6 AWG four conductor, and 16 to 10 AWG seven conductor constructions. Cable rated 300 V is labeled in two, three, four and seven conductor, sizes 18 to 16 AWG, for use on signaling circuits.

The copper sheath is suitable as an equipment grounding conductor. For cable with alloy steel outer sheath one of the conductors is to be used for equipment grounding.

Nonmetallic jackets or coatings have not been investigated for resistance to corrosion.

PRODUCT MARKINGS

Information regarding voltage rating, cable Type, and conductor size is shown either on a tag affixed to the reel or carton, or on the surface of the metal sheath. If a nonmetallic jacket is used, the information is printed on the surface of the jacket.

Cable with nonmetallic jackets has the following marking on a tag affixed to the reel or carton: "Not suitable for use in Ducts, Plenums or Other Spaces used for environmental air."

Cable with nonmetallic jackets marked "Not suitable for use on or in buildings" has not been investigated for fire retardance but are sunlight resistant.

Cable with nonmetallic jackets that has been investigated for use in cable trays is surface marked "CT Use" or "Cable Tray Use" and may additionally be marked "Sunlight Resistant" if applicable.

PRODUCT IDENTITY

The following product identity appears on the product:
Mineral-insulated Metal-sheathed Cable

RELATED PRODUCTS

Terminations especially investigated for use with this cable are covered under Mineral-insulated-cable Fittings (PPYT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Metal-Sheathed Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MINERAL-INSULATED CABLE FITTINGS (PPYT)

GENERAL

This category covers fittings intended for use with mineral-insulated cable (Type MI) and small-diameter mineral-insulated cable. These fittings are suitable for use at a maximum operating temperature of 90°C in dry locations and 60°C in wet locations. A complete box connector consists of a connector body and a screw-on potting fitting. These fittings are intended for installation and use in accordance with the following information and the limitations specified in Mineral-insulated Metal-sheathed Cable (PPKV).

All male threaded fittings have only been investigated for use with lock-nuts.

Screw-on Potting Fitting — The screw-on potting fitting to be used with the connector may be used separately as an end fitting for change to open wiring. The screw-on potting fitting is intended to be assembled with a special tool and consists of a screw-on pot, insulating cap, insulating sleeving, anchoring bead, and sealing compound.

Grounding — These fittings are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code."

Reusability — Fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Box Connector

Connector

Mineral-insulated-cable Fitting

Other product identities may be used as shown in the individual certifications.

Mineral-insulated Cable Fittings (PPYT)—Continued

ADDITIONAL INFORMATION

For additional information, see Mineral-insulated Metal-sheathed Cable (PPKV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings." Products not identified with a specific standard reference are investigated to the 6th ed. (issued July 13, 2012; last revised June 4, 2014). All other products are identified by the specific standard/edition/date in the individual certifications.

UL MARK

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Cable Fitting," "Connector" or "Box Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MODULAR DATA CENTERS (PQVA)

GENERAL

This category covers modular data centers (MDC), which are self-contained assemblies of information technology equipment (ITE) installed within prefabricated enclosures. MDCs may be provided with integral support equipment such as power distribution units, HVAC equipment, standby power, illumination and the like, that are required for the operation of the ITE. In some cases, the support equipment may be housed in its own separate enclosure, and certified as part of the MDC system. Modular data centers, as covered under this category, are sometimes referred to as "containerized data centers."

This category also covers accessory power modules intended for use with modular data centers.

MDCs are comprised of the enclosure, all equipment and components located within the enclosure, and all components mounted to the walls of the enclosure.

MDCs may permit the temporary entry of authorized personnel within the enclosure for service, maintenance and upgrading of the ITE and associated support equipment. They are not intended to provide an occupied space (as in an office) for personnel.

MDCs are investigated as complete equipment including subassemblies, power distribution, cabling, cooling system components, lighting and the like, installed within the enclosure. Consideration has also been given to emergency egress of maintenance personnel and working space around equipment. MDCs are not investigated as an ITE room as described in ANSI/NFPA 75, "Fire Protection of Information Technology Equipment," and Article 645 of ANSI/NFPA 70, "National Electrical Code" (NEC).

When provided, fire protection and detection equipment has been investigated for compliance with the appropriate codes and standards applying to these installations, such as ANSI/NFPA 72, "National Fire Alarm and Signaling Code," ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems," ANSI/NFPA 12A, "Halon 1301 Fire Extinguishing Systems," and ANSI/NFPA 2001, "Clean Agent Fire Extinguishing Systems."

This category does not cover preconfigured ITE rooms that are shipped as individual pieces of equipment or subassemblies and assembled on-site.

USE AND INSTALLATION

These MDCs are rated 600 V or less and are intended to be installed in accordance with the NEC.

MDCs are pre-configured and, except as permitted below, are pre-assembled at the manufacturing location and are shipped and installed intact, requiring only electrical, network and cooling system hookups (when external cooling equipment is used) at the installation site.

An MDC may be shipped from the factory unassembled, or disassembled to the degree necessary to facilitate shipment. In some cases, sub-assemblies may be shipped separately for final assembly at the installation site. In these cases, the following apply:

1. All of the parts are furnished or specified by the manufacturer.
2. The specific location of the assemblies in the MDC and their methods of installation are predetermined by the manufacturer and are not dependent upon installation personnel.
3. Electrical connections used to connect the field-installed components within the cabinet are accomplished by means of plugs and receptacles, or other means that are in compliance with the NEC.
4. Detailed step-by-step installation instructions are provided in the form of installation instructions or a detailed installation practice.
5. Parts and subassemblies are marked with the assembly manufacturer's company name or logo, and a part number (P/N) or other type designation.

An MDC may be constructed with empty space or bays or empty shelf or rack space for the installation of ITE that is not specifically defined by, or under the control of, the MDC manufacturer. The generic type of ITE, together with its installation, connection and maximum ratings, is defined by the MDC manufacturer and this information is included in the system drawings and schematics. Maximum permissible weigh loads of the auxiliary ITE is predetermined by the MDC manufacturer and this information is included in the installation instructions and system diagrams for the MDC. A marking is provided as part of, or in the vicinity of, the main MDC nameplate stating the following or its equivalent: "ATTENTION! This MDC is provided with space for the installation of auxiliary IT equipment that is not evaluated as part of the MDC certification. Refer to [drawing /document number] for a complete list of equipment that is included as part of the certification of this MDC. Unevaluated equipment is subject to inspection and approval by local authorities having jurisdiction."

Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either a specific or generic certified equipment specified in the markings or instructions.

MDCs are intended for fixed installation. Unless otherwise identified, MDCs are intended for indoor installation. MDCs intended for outdoor use are marked "Outdoor Use," "Raintight" or "Rainproof," or are provided with a NEMA environmental class rating.

MDCs are intended for installation subject to approval by the Authority Having Jurisdiction (AHJ). AHJs should also be consulted if installation requires structural loading considerations.

Information concerning field-wiring connections, mounting location, site preparation, installation clearances, etc., is marked on the MDC and/or is provided in detailed installation instructions accompanying each MDC.

Working space within an MDC is evaluated as part of the equipment investigation. Access and working space around electrical equipment that is accessible from the outside of the MDC (such as an outward-facing panel-board or field-wiring compartment) is intended to comply with the applicable requirements in 110.26 of the NEC after the installation of one or more MDCs at a site.

The installation and arrangement of one or more MDCs at a site should not interfere with exits provided in the MDC.

MDCs often require special installation, such as a separate transformer, special grounding methods, motor-generator equipment, external chillers, etc. Such features, if required, are covered in the manufacturer's installation instructions.

MDC systems consisting of the main MDC enclosure housing the ITE and one or more additional enclosures for power, cooling, etc., are investigated as a system and are identified as such in the individual certifications. The relationship and interconnections between the parts of the system are clearly identified in the manufacturer's installation instructions. Interconnecting power, signaling and communications wire and cable not investigated as part of an MDC system is intended to be installed in accordance with the applicable provisions of the NEC. The accessory equipment is marked with a reference to, and the identification of, the equipment with which it is intended to be used.

Accessory power modules intended for use with modular data centers that are not part of a specific MDC system are identified as such in the individual certifications.

FIRE-RESISTANCE RATINGS

A fire-resistance rating for the MDC enclosure is not required but may be provided. When provided, all parts of the outer enclosure are rated based on testing as a nonbearing wall in accordance with ANSI/UL 263, "Fire Tests of Building Construction and Materials." The rating, if provided, is included in the individual certifications.

WIRING DIAGRAMS

The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

FACTORS NOT INVESTIGATED

Other features that may affect the operation or performance of the installed equipment have not been investigated.

Mechanical structures that may be part of the final installation such as ramps, ladders, stairs, platforms and the like have not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Accessory Power Assembly for Use with Modular Data Centers (for accessory power modules intended for use with nonspecified modular data centers)

Accessory Power Module for Use with Modular Data Centers (for accessory power modules intended for use with nonspecified modular data centers)

Accessory Power Pod for Use with Modular Data Centers (for accessory power modules intended for use with nonspecified modular data centers)

Accessory Power Unit for Use with Modular Data Centers (for accessory power modules intended for use with nonspecified modular data centers)

Modular Data Center

Modular Data Center Accessory (for separate modules housing support equipment that are part of an MDC system)

RELATED PRODUCTS

The installation of electrical systems in commercial or industrial prefabricated buildings and units is covered under Commercial and Industrial Prefabricated Buildings and Units (QRXA).

Power modules not intended only for use with modular data centers are covered under Commercial and Industrial Prefabricated Buildings and Units (QRXA).

Information processing equipment including equipment investigated for installation in information technology equipment (computer) rooms as defined in ANSI/NFPA 75, "Fire Protection of Information Technology Equipment," and Article 645 of the NEC is covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ) or Information Technology Equipment (AZOT).

External chillers and other cooling systems that are not part of a modular data center are covered under Heating and Cooling Equipment (LZFE).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2755, "Outline of Investigation for Modular Data Centers."

The basic standard used to investigate individual ITE used in MDCs in this category is ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

MDCs investigated for fire resistance are additionally marked:

AS TO FIRE RESISTANCE

RATING: + H

TEMP RISE: ++

+ 4, 3, 1-1/2 or 3/4

++ 30 MIN – 250°F MAX, 30 MIN – 450°F MAX, 30 MIN – 650°F MAX,

or no reference to temperature rise when the temperature rise exceeds 650°F at 30 min.

OR

AS TO FIRE RESISTANCE

SEE UL ONLINE CERTIFICATIONS DIRECTORY

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Modular Data Center."

The Listing Mark for field-installed accessories or other accessory equipment covered under this category includes the word "Accessory" (e.g., "Modular Data Center Accessory").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR-GENERATOR SETS (PQYW)

USE

This category covers indoor-use motor-generator sets and frequency converters intended for use in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT IDENTITY

MOTOR-GENERATOR SETS (PQYW)

One of the following product identities appears on the product:
Flywheel Energy Storage System
Motor-Generator Set

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

This category does not cover electrical-generating equipment driven by gasoline, LP-gas, or diesel-fueled internal-combustion engines. These products are covered under Engine Generators (FISR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," ANSI/UL 1004-1, "Rotating Electrical Machines – General Requirements," and UL 1248, "Engine-Generator Assemblies for Use in Recreational Vehicles."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark
UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor-Generator Set" or "Flywheel Energy Storage System," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS (PRGY)

USE

This category covers industrial motors intended to be field installed in accordance with Article 430 of ANSI/NFPA 70, "National Electrical Code" (NEC).

INSTALLATION

All motors are provided with installation information that indicates the proper methods to secure the motor and electrically connect the motor to the power source. The instructions also provide information concerning the type of load the motor can operate and, if needed, the type of protection.

An enclosed-type motor is not intended to be installed in an enclosure unless a marking on the motor, the installation instructions or a stuffer sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

When conduit hubs are not provided for a Type 2, 3, 3R, 3S or 5 enclosure, the enclosure, the instruction sheet provided with the enclosure, or the packaging carton is marked to indicate raintight or wet-location hubs that comply with the requirements in ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings," are intended to be used.

A separable conduit hub and a closure fitting is marked with the manufacturer's name or trademark and the catalog number or equivalent. Such a hub or fitting may be shipped separately, and any gasket, hardware, and instructions necessary for installation is shipped with the fitting or packaged with the enclosure.

An enclosure marked Type 4, 4X, 6 or 6P is provided with instructions for use of the watertight connection if the connection is not mounted on the enclosure.

Installation instructions are provided with an enclosure intended for field assembly of the bonding means that identifies the parts for bonding and specifies the method of installation.

Instructions are provided with the enclosure indicating that when installed in a Type 2 or 3R environment, the drain hole plug is intended to be removed.

PRODUCT MARKINGS

An enclosed-type motor has the Enclosure Type designation marked on the motor for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

These motors are marked with:

MOTORS (PRGY)

1. the manufacturer's name or identification,
2. the motor catalog or model number,
3. the rated voltage,
4. the full-load amperes, watts or kilowatts, or both,
5. the rated speed,
6. the rated horsepower or output wattage,
7. the rated temperature rise or the insulation system class,
8. the rated ambient temperature,
9. the rated frequency, expressed in one of the following terms: hertz; Hz; ac-dc (frequency in Hz)/dc (e.g., 60/dc); ac only; direct current,
10. the number of phases.
11. A continuous-duty motor is marked "Continuous" (or "CONT").
12. A direct-current motor is marked to indicate the winding type: straight shunt, stabilized shunt, compound or series.
13. A multi-speed motor is marked with the amperes and horsepower at each speed.

These motors are marked to indicate the temperature rating (e.g., 60°C only, 60/75, or 75°C only) of the field-installed conductors for which the equipment has been investigated.

A motor manufactured at more than one factory is marked to uniquely identify the factory of manufacture.

Motors equipped with electrically-powered condensation prevention heaters are marked with the rated heater voltage, number of phases, and the rated power in watts.

Air-over motors are marked "Air Over" (or "AO") or "Air-Over Motor" (or "AOM").

An alternating-current motor is marked with a code letter to indicate the locked-rotor amperes in accordance with the NEC.

A wound-rotor induction motor is marked with the secondary volts and full-load amperes.

A motor rated for short-time or intermittent duty is marked on the nameplate with the words "intermittent duty" (or "int. duty") and with the time rating in minutes or hours, or a combination of minutes and hours. The rating may be for "On" time only or include specifications for both "On" and "Off" periods.

If the acceptability of a Type 2 or 3R enclosure is dependent upon a particular mounting orientation, the enclosure is marked to indicate the required orientation.

A cast-metal enclosure marked Type 3, 3R, or 3S is marked to indicate that, after determining the mounting position of the enclosure, any holes drilled in the field are intended to be located in the lowest part of the bottom wall.

Exception: If a manufacturer intends that a cast-metal enclosure be acceptable for field drilling and tapping of holes for conduit connections, the enclosure is marked to indicate the location and trade sizes of conduit for which the enclosure has been found to be acceptable. If counter-boring is necessary to accommodate certain sizes of conduit, such information is also given.

Note: The instructions for drilling and tapping may be provided on an instruction sheet provided with the enclosure or marked on the packaging carton.

Any environmental-type enclosure intended for use with conduit hubs, and/or other field-installed equipment, but shipped from the factory without them, is marked or provided with instructions that identify the type of equipment intended to be used to maintain the environmental integrity of the enclosure. This may be accomplished by identifying the necessary environmental type designation or by identifying the specific manufacturer and model number of the field-installed equipment.

PRODUCT IDENTITY

The following product identity appears on the product:
Electric Motor

RELATED PRODUCTS

Motors intended for use in hazardous (classified) locations are covered under Motors for Use in Hazardous Locations (PTDR), Motors, Specialty for Use in Hazardous Locations (PUC), and Motors, Division 2 for Use in Hazardous Locations (PTHE).

Motors incomplete in construction and intended for factory installation are covered under Motors (PRGY2).

Products Verified for energy efficiency are covered under Electric Motors Verified for Energy Efficiency (ZWKG).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1004-1, "Rotating Electrical Machines – General Requirements."

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to ANSI/UL 840, "Insulation Coordination Including Clearances and Creepage Distances for Electrical Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS, INVERTER DUTY (PRHJ)

USE

This category covers squirrel cage, polyphase induction motors intended for use with variable voltage and variable frequency controls (commonly referred to as inverters) that are:

1. three-phase,
2. intended to be field installed in accordance with Article 430 of ANSI/NFPA 70, "National Electrical Code" (NEC),
3. 5 hp and larger,
4. classified as NEMA Medium or NEMA Large as defined in NEMA MG-1, "Motors and Generators," and
5. where the motor overtemperature protection required by Part III of Article 430 of the NEC is intended to be provided by a separate overload device or control.

The requirements for this category are intended to investigate the suitability of the motor for normal use when fed from an inverter supply through a manufacturer-declared range of operating conditions.

This category does not cover:

1. the efficacy of motor-overtemperature protection under abnormal conditions,
2. the operation of a motor under unusual service conditions as described in Part 31 of NEMA MG-1, nor
3. the operation of a motor in hazardous (classified) locations.

Though the motors covered under this category may be provided with Recognized overtemperature protection, the suitability of the overtemperature protection has not been investigated and must be determined in the end-use application.

INSTALLATION

All motors are provided with installation information that indicates the proper methods to secure the motor and electrically connect the motor to the power source. The instructions also provide information concerning the type of load the motor can operate and, if needed, the type of protection.

An enclosed-type motor is not intended to be installed in an enclosure unless a marking on the motor, the installation instructions, or a stuffer sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

When conduit hubs are not provided for a Type 2, 3, 3R, 3S or 5 enclosure, the enclosure, the instruction sheet provided with the enclosure, or the packaging carton is marked to indicate that raintight or wet-location hubs complying with the requirements in ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings," are intended to be used.

A separable conduit hub and a closure fitting is marked with the manufacturer's name or trademark and the catalog number or equivalent. Such a hub or fitting may be shipped separately, and any gasket, hardware, and instructions necessary for installation is shipped with the fitting or packaged with the enclosure.

An enclosure marked Type 4, 4X, 6 or 6P is provided with instructions for use of the watertight connection if the connection is not mounted on the enclosure.

Installation instructions are provided with an enclosure intended for field assembly of the bonding means that identify the parts for bonding and specify the method of installation.

Instructions are provided with the enclosure indicating that when installed in a Type 2 or 3R environment, the drain hole plug is intended to be removed.

PRODUCT MARKINGS

An enclosed-type motor has the Enclosure Type designation marked on the motor for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

These motors are marked with:

1. the manufacturer's name or identification,
2. the motor catalog or model number,

3. the rated voltage,
4. the full-load amperes, watts or kilowatts, or both,
5. the rated speed,
6. the rated horsepower or output wattage,
7. the rated temperature rise or the insulation system class,
8. the rated ambient temperature,
9. the rated frequency, expressed in one of the following terms: hertz (or Hz); ac-dc (frequency in Hz)/dc (e.g., 60/dc); ac only; direct current, and
10. the number of phases.
11. A continuous-duty motor is marked "Continuous" (or "CONT").
12. A direct-current motor is marked to indicate the winding type: straight shunt, stabilized shunt, compound or series.
13. A multi-speed motor is marked with the amperes and horsepower at each speed.

These motors are marked to indicate the temperature rating (e.g., 60°C only, 60/75, or 75°C only) of the field-installed conductors for which the equipment has been investigated.

Motors equipped with electrically-powered, condensation-prevention heaters are marked with the rated heater voltage, number of phases, and the rated power in watts.

Air-over motors are marked "Air Over" (or "AO") or "Air-Over Motor" (or "AOM").

An alternating-current motor is marked with a code letter to indicate the locked-rotor amperes in accordance with the NEC.

A wound-rotor induction motor is marked with the secondary volts and full-load amperes.

A motor rated for short-time or intermittent duty is marked on the nameplate with the words "intermittent duty" (or "int. duty") and with the time rating in minutes or hours, or a combination of minutes and hours. The rating may be for "On" time only or include specifications for both "On" and "Off" periods.

If the acceptability of a Type 2 or 3R enclosure is dependent upon a particular mounting orientation, the enclosure is marked to indicate the required orientation.

A cast-metal enclosure marked Type 3, 3R or 3S is marked to indicate that, after determining the mounting position of the enclosure, any holes drilled in the field are intended to be located in the lowest part of the bottom wall.

Exception: If a manufacturer intends that a cast-metal enclosure be acceptable for field drilling and tapping of holes for conduit connections, the enclosure is marked to indicate the location and trade sizes of conduit for which the enclosure has been found to be acceptable. If counter-boring is necessary to accommodate certain sizes of conduit, such information is also given.

Note: The instructions for drilling and tapping may be provided on an instruction sheet provided with the enclosure or marked on the packaging carton.

Any environmental-type enclosure intended for use with conduit hubs and/or other field-installed equipment, but shipped from the factory without them, is marked or provided with instructions that identify the type of equipment intended to be used to maintain the environmental integrity of the enclosure. This may be accomplished by identifying the necessary environmental type designation or by identifying the specific manufacturer and model number of the field-installed equipment.

RELATED PRODUCTS

Motors intended for use in hazardous (classified) locations are covered under Motors for Use in Hazardous Locations (PTDR), Motors, Specialty for Use in Hazardous Locations (PUC), and Motors, Division 2 for Use in Hazardous Locations (PHE).

Motors incomplete in construction and intended for factory installation are covered under Motors (PRGY2).

Motors Verified for energy efficiency are covered under Electric Motors Verified for Energy Efficiency (ZWKG).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1004-1, "Rotating Electrical Machines - General Requirements," and ANSI/UL 1004-8, "Inverter Duty Motors."

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to ANSI/UL 840, "Insulation Coordination Including Clearances and Creepage Distances for Electrical Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inverter-duty Motor."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SERVO AND STEPPER MOTORS (PRHZ)

USE

This category covers:

servo motors, defined as motors specially designed and built, having a high speed of response and designed for use in feedback control systems (servomechanisms), typically for precision positioning, and **stepper motors**, defined as brushless, synchronous electric motors that can divide a full rotation into a large number of steps.

These motors are intended to be field installed in accordance with Article 430 of ANSI/NFPA 70, "National Electrical Code."

This category covers the suitability of the motor for normal use when fed from an appropriate controller (drive) through its manufacturer-declared normal operating region.

This category does not cover the efficacy of motor overtemperature protection under normal or abnormal conditions, or the operation of a motor in hazardous (classified) locations.

Though these motors may be provided with overtemperature protection, the suitability of the overtemperature protection has not been investigated.

INSTALLATION

All motors are provided with installation information that indicates the proper methods to secure the motor and electrically connect the motor to the power source. The instructions also provide information concerning the type of load the motor can operate and, if needed, the type of protection.

An enclosed-type motor is not intended to be installed in an enclosure unless a marking on the motor, the installation instructions, or a sticker sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

When conduit hubs are not provided for a Type 2, 3, 3R, 3S or 5 enclosure, the enclosure, the instruction sheet provided with the enclosure, or the packaging carton is marked to indicate that raintight or wet-location hubs complying with the requirements in ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings," are intended to be used.

A separable conduit hub and a closure fitting is marked with the manufacturer's name or trademark and the catalog number or equivalent. Such a hub or fitting may be shipped separately, and any gasket, hardware, and instructions necessary for installation is shipped with the fitting or packaged with the enclosure.

An enclosure marked Type 4, 4X, 6 or 6P is provided with instructions for use of the watertight connection if the connection is not mounted on the enclosure.

Installation instructions are provided with an enclosure intended for field assembly of the bonding means that identify the parts for bonding and specify the method of installation.

Instructions are provided with the enclosure indicating that when installed in a Type 2 or 3R environment, the drain hole plug is intended to be removed.

PRODUCT MARKINGS

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

All motors covered under this category are marked with:

1. the manufacturer's name or identification,
2. the motor catalog or model number,
3. the rated voltage,
4. the full-load amperes, watts or kilowatts, or both,
5. the rated speed,
6. the rated horsepower or output wattage,
7. the rated temperature rise or the insulation system class, and
8. the rated ambient temperature.

Servo motors are additionally marked with:

1. the continuous stall current,
2. the maximum rotational speed, and
3. the words "Servo Motor."

Stepper motors are additionally marked with:

1. the holding torque,
2. the maximum rotational speed, and
3. the words "Stepper Motor."

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor for Use in Class I, Zone 0, 1 and 2 Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS, SPECIALTY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PRZM)

USE AND INSTALLATION

This category covers specialty motors. These motors are intended for installation and operation in accordance with the instructions provided for each motor by the manufacturer. These motors may require any or all of the following for proper operation: (1) special controllers, (2) special control circuitry, (3) atypical input voltage waveform, (4) atypical input current waveform. Refer to the operating instructions. These motors are not intended for across-the-line operation.

Unless otherwise marked, these motors are intended for use in ambient temperatures within the range of -20°C (-4°F) to +40°C (+104°F).

The Certification Mark on a specialty motor applies to the motor, but not any equipment driving or driven by the motor.

PRODUCT IDENTITY

The following product identity appears on the product:
Specialty Motor for Use in Hazardous Locations

MOTORS, DIVISION 2 FOR USE IN HAZARDOUS LOCATIONS (PTHE)

GENERAL

This category covers electric motors for use in Class I, Division 2, Groups A, B, C and D, and Class II, Division 2, Groups F and G hazardous (classified) locations.

For Class I, Division 2 locations, the enclosure may be of the open or totally enclosed type. The Group designation is marked unless the motor is acceptable for Groups A, B, C and D. The motor is also marked with the operating-temperature code designating the maximum internal or external surface temperature determined at rated full-load steady-state conditions, if the temperature is greater than 100°C. If the enclosure incorporates one or more arcing or sparking parts, the part is housed in a Class I, Division 1 enclosure or the part is within a hermetically sealed enclosure, constructed with current interrupting contacts immersed in oil, located in a noninductive circuit, or located in a purged and pressurized enclosure. If the motor is provided with an internal space heater, the space heater is intended to be wired in the control circuit such that the space heater is energized when the motor is de-energized, and vice versa. The maximum surface temperature of the space heater is marked on the motor, if the temperature exceeds 80% of the operating temperature of the motor.

For Class II, Division 2 locations, the enclosure is of the totally enclosed type. The motor is marked with the operating temperature or operating-temperature code designating the maximum full-load external temperature determined at rated full-load steady-state conditions when operating in free air (not dust blanketed), if the external temperature is greater than 100°C.

PRODUCT IDENTITY

The following product identity appears on the product:
Electric Motor for Division 2 Hazardous Locations

RELATED PRODUCTS

For Division 1 motors, see Motors for Use in Hazardous Locations (PTDR).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1836, "Outline of Investigation for Electric Motors and Generators for Use in Class I, Division 2 and Class II, Division 2 Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor for Division 2 Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS AND GENERATORS, REBUILT FOR USE IN HAZARDOUS LOCATIONS (PTKQ)

USE

This category covers rebuilt motors and generators for use in Class I, Groups B, C and D, and Class II, Groups E, F and G hazardous locations.

Unless otherwise marked, rebuilt motors and generators for use in Class I and Class II hazardous locations are intended for use in ambient temperatures within the range of -25°C (-13°F) to +40°C (+104°F).

The Certification Mark on a rebuilt motor or generator applies to the motor or generator, but not to any equipment driven by or driving the

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rebuilt Electric Motor for Hazardous Locations" or "Rebuilt Electric Generator for Hazardous Locations."

The Listing Mark on a rebuilt motor or generator applies to the motor or generator, but not to any equipment driven by or driving the motor or generator. In the case of a rebuilt motor-generator set provided with a common base, the motor and generator will each bear its respective Listing Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS, SPECIALTY FOR USE IN HAZARDOUS LOCATIONS (PUCJ)

USE AND INSTALLATION

This category covers specialty motors for use in Class I, Groups B, C and D; Class II, Groups E, F and G hazardous (classified) locations.

These motors are intended for installation and operation in accordance with the instructions provided for each motor by the manufacturer. These motors may require any or all of the following for proper operation: (1) special controllers, (2) special control circuitry, (3) atypical input voltage waveform, (4) atypical input current waveform. Refer to the operating instructions. These motors are not intended for across-the-line operation.

Unless otherwise marked, these motors are intended for use in ambient temperatures within the range of -25°C (-13°F) to +40°C (+104°F).

The Certification Mark on a specialty motor applies to the motor, but not any equipment driving or driven by the motor.

PRODUCT IDENTITY

The following product identity appears on the product:
Specialty Motor for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

MOUNTING POSTS AND PEDESTALS FOR DISTRIBUTION EQUIPMENT (PUPR)

GENERAL

This category covers mounting posts and pedestals rated 600 V ac or less. They are intended to serve as a raceway for underground wiring that is being brought above grade to feed an outdoor electrical distribution device, such as a power outlet, panelboard, meter socket, circuit breaker enclosure or the like. They are intended to support the distribution device, which is installed either in the factory or in the field. They may contain electrical termination points for underground wiring and for wiring to the distribution device.

USE AND INSTALLATION

A mounting post is intended to be mounted in concrete at grade level or below, or is intended to be secured to some other mounting support.

A mounting pedestal is intended to be mounted to a concrete slab.

A mounting post or pedestal either has ventilation to inhibit condensation or is provided with instructions indicating the correct mounting procedure.

Unless marked otherwise, a mounting post or pedestal is intended to be self-supporting and is not intended to serve as the support of a mast for overhead wiring.

Investigation of posts and pedestals include a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

PRODUCT MARKINGS

Mounting posts and pedestals are marked to indicate the electrical distribution unit(s) with which they are intended to be used.

A mounting post is marked with a grade level line to which the post is intended to be encased.

Posts and pedestals are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and shall be on a wiring diagram or other readily visible location.

Unless the equipment is marked with both the size and temperature rating of wire to be used, the termination provisions on equipment are based on the use of 60°C wire ampacities for wire sizes 14-1 AWG, and 75°C wire ampacities for wire sizes 1/0 AWG and larger.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Mounting Pedestal
- Mounting Post

RELATED PRODUCTS

Termination boxes are covered under Termination Boxes (XCKT).

Equipment connected only by busbars to both input and output circuits and equipment known as "end cable tap boxes" are covered under Busways and Associated Fittings (CWFT).

Equipment containing switching devices, relays or overcurrent devices is covered under the appropriate category; see Switchboards, Dead-front (WEVZ), Industrial Control Panels (NITW) or Panelboards (QEUY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1773, "Termination Boxes."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mounting Post and Pedestal."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTIOUTLET ASSEMBLIES (PVGT)

GENERAL

This category covers multioutlet assemblies, accessories for use with multioutlet assemblies, and factory-assembled wiring kits intended for installation into multioutlet assemblies.

Multioutlet assemblies consist of an enclosure or raceway and outlet wiring devices that provide power for connection of utilization equipment.

Multioutlet assemblies are intended for use in dry locations, other than hazardous (classified) locations, in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). Multioutlet assemblies are intended to be connected to permanently installed branch circuits operating at frequencies between 50 and 400 Hz and dc (direct current) circuits.

A multioutlet assembly may be provided with channels for additional power circuits, control circuits, power-limited circuits and communication-circuit wiring for audio, video and data.

Accessories are parts that may be added to a multioutlet assembly either by the manufacturer or by the installer to add functionality, e.g., hangers, retainers, luminaires, remote-control modules, signs.

Wiring kits are assemblies of conductors and devices, such as receptacle outlets, switches, etc., that are supplied as a wiring system for use in specific multioutlet assemblies.

A part used to connect, change direction, or terminate a multioutlet assembly (e.g., a transition coupler, an end cap, a corner, a tee, an adapter, a box) or a specific wiring device that completes the system is covered under Multioutlet Assembly Fittings (PVUR).

USE AND INSTALLATION

Multioutlet assemblies have not been investigated for use in general patient care areas or critical patient care areas of health care facilities as defined in Article 517 of the NEC.

Multioutlet assemblies are intended for installation in accordance with Article 380 of the NEC.

Instructions for Multioutlet Assemblies Investigated to UL Subject 111, "Outline of Investigation for Multioutlet Assemblies"

When installation instructions are not provided with the multioutlet assembly, the multioutlet assembly is marked with the following or equivalent: "Installation and operation instructions for model ___ are available at http://www.____.com/___/." The blanks are filled in with the model number and URL address where the actual instructions can be viewed, downloaded and/or printed.

A multioutlet assembly intended to be mounted on or into a work surface is investigated for use with one of the following specific types of work surfaces:

1. Dry-use work surface (e.g., office desk, table)
2. A work surface located directly adjacent to a lavatory or other water source (e.g., counter adjacent to a kitchen sink)

Hardware, accessories and fittings are provided with the multioutlet assembly or are specified in the instructions.

Instructions for the installation of accessories and wiring kits indicate the specific multioutlet assemblies for which they are intended to be used. Instructions are provided on or with the accessory or wiring kit.

PRODUCT MARKINGS

Specific Product Markings for Multioutlet Assemblies Investigated to ANSI/UL 5, "Surface Metal Raceways and Fittings," and ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings"

Separate channels may be provided in multioutlet assemblies where the product is marked to indicate the number, type and size of additional conductors that may be field installed.

Specific Product Markings for Multioutlet Assemblies Investigated to UL Subject 111

Multioutlet Assemblies Investigated to UL Subject 111

Multioutlet assemblies investigated to UL Subject 111 are marked with one of the following Type markings:

Type A — A multioutlet assembly that provides all the required parts and incorporates factory pre-wired power (mains) conductors to the wiring devices and accessories. The field-wiring connection consists of one of the following: conduit whip, armored cable, manufactured wiring system, office-furnishing wiring system, pigtail lead or terminal block, or is intended to terminate on installed device wiring terminals. Pre-wired communications wiring may be provided. No additional unwired raceways for power or communications conductors are provided. No field-wired accessories are provided for the system.

Type A1 — Identical to a Type A multioutlet assembly except additional unwired raceways for power and/or communications conductors may be provided, or accessories may be provided with the system but are not pre-wired or installed at the factory.

Type B — A multioutlet assembly that provides for the installation, routing and termination of the branch-circuit-conductor wiring within the multioutlet assembly in the field. Wiring devices, fittings and accessories are provided with the system but are not pre-wired and installed at the factory.

Type C — A multioutlet assembly that does not include factory-installed conductors, wiring devices or accessories, but has factory-provided openings for wiring devices or accessories. This type of multioutlet assembly is marked for use with the specific kit(s) that may be shipped with the multioutlet assembly or shipped separately from the multioutlet assembly for field installation.

A Type A1 or B multioutlet assembly provided with a raceway for field-installed conductors is marked "Field-wiring Raceway" or an equivalent statement on the cover or inside wall of the raceway. These assemblies are also marked, on their base or cover and in the installation instructions, with the number, type and size of insulated conductors for which the multioutlet assembly was investigated.

A wiring compartment of a multioutlet assembly intended for use only with Class 2 circuits is marked "For Class 2 Circuits Only."

A multioutlet assembly and component parts that are disassembled for shipment are marked to associate the separable parts. The following or equivalent statement is provided on the parts: "Multioutlet assembly part ___ for use with ___." The marking may be on the part or on the smallest unit container of parts.

Accessories

An electrical accessory that is a load on a circuit is marked with its electrical rating.

An accessory intended for installation on a suspended multioutlet assembly is marked with the weight of the accessory.

Wiring Kits

A wiring kit is marked with a flag label attached to the conductor(s) with a distinctive catalog number or the equivalent.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Multioutlet Assembly
- Multioutlet Assembly Accessory
- Multioutlet Assembly Wiring Kit

RELATED PRODUCTS

Raceway assemblies that incorporate ground-fault circuit interrupter receptacles and no other outlets are covered under Ground-fault Circuit Interrupters (KCSX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5, "Surface Metal Raceways and Fittings," and ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings," or the requirements contained in UL Subject 111, "Outline of Investigation for Multioutlet Assemblies."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multioutlet Assembly," "Multioutlet Assembly Accessory" or "Multioutlet Assembly Wiring Kit."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTIOUTLET ASSEMBLY FITTINGS (PVUR)

USE AND INSTALLATION

This category covers multioutlet assembly fittings used to connect, change direction, or terminate a multioutlet assembly (e.g., a transition coupler, an end cap, a corner, a tee, an adapter, a box) or which are specific wiring devices that complete the system.

Multioutlet assembly fittings are intended for installation in accordance with Article 380 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT IDENTITY

Multioutlet Assembly Fittings (PVUR)—Continued

One of the following product identities appears on the product:

- Elbow
- End Fitting
- Multioutlet Assembly Fitting

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Multioutlet Assemblies (PVG T) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5, "Surface Metal Raceways and Fittings," and ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings," or the requirements contained in UL Subject 111, "Outline of Investigation for Multioutlet Assemblies."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-Outlet Assembly Fitting," "Elbow" or "End Fitting," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY (PVVA)

GENERAL

This category covers multi-point interconnection power cable assemblies intended for use in an industrial environment to distribute power to branch circuits, including motor branch circuits, of industrial machinery. The assemblies may consist of power cable assemblies, male and female power cable fittings, panel-mounted power cable/conductor fittings and feeder-tap power cable fittings used with industrial machinery in accordance with ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

This category does not cover male-to-male cable assemblies or multi-outlet fittings.

Product Types

The following products are covered under this category:

Power Cable Assemblies — These assemblies consist of a length of flexible cord or cable with a molded-on or assembled-on male or female power cable fitting on at least one end of the cable.

Male and Female Power Cable Fittings — These fittings are intended to be field-wired onto flexible cord or cable with either a male or female insert. The diameter and the wire size of the flexible cord or cable to which the fitting is intended to be assembled is marked on the individual fitting or on the smallest unit shipping container.

Panel-mounted Power Cable/Conductor Fittings — These fittings consist of a panel-mounted assembly with either a male or female insert. Each assembly is provided with a means to secure to an enclosure of the industrial machinery.

Feeder-tap Power Cable Fittings — These fittings are intended for feed-through termination to tray cable or other appropriate cable, together with either a female interconnection device to terminate to a cable assembly or to connect to flexible cord or cable suitable for hard use, that is the same size and ampacity as the feeder cable.

SPECIAL CONSIDERATIONS

The power cable assemblies and mating fittings are not intended to be used as a substitute for the fixed wiring of the building structure. The power cable assemblies and mating fittings may be connected to the fixed wiring of the building structure, using a feeder-tap fitting or male/female cable fittings.

PRODUCT CATEGORIES BY CATEGORY CODE

386 MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY (PVVA)

These devices are intended for use only with the Listee's same line of products covered under this category.
 Power cable assemblies and fittings covered under this category are not intended to make or interrupt current under load conditions.
 These devices are intended for indoor use only, unless otherwise so identified.

RATINGS

These power cable assemblies are rated 600 V or less. Each power cable assembly and fitting is rated in volts and amperes. The electrical ratings are marked on each device or on a flag label affixed to each individual power cable assembly.

These power cable assemblies and fittings have been investigated for their marked short-circuit current rating. Power cable assemblies and fittings may specify a maximum ampere rating, type of overcurrent protective device, or both. Unless otherwise marked, the power cable assemblies and fittings are intended to be supplied from an overcurrent protective device of the maximum ampere rating permitted by Table 7.2.10.4 of ANSI/NFPA 79.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Multi-point Interconnection Assembly
 Power Cable Assembly for Industrial Machinery
 Power Cable Fitting for Industrial Machinery

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 2237, "Outline of Investigation for Multi-Point Interconnection Power Cable Assemblies for Industrial Machinery."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-point Interconnection Assembly," "Power Cable Assembly for Industrial Machinery" or "Power Cable Fitting for Industrial Machinery."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY FOR USE IN HAZARDOUS LOCATIONS (PVVJ)

GENERAL

This category covers multi-point interconnection power cable assemblies intended for use in industrial establishments with restricted public access in locations that are classified as a Class I, Division 2 location. The assemblies may consist of power cable assemblies, power cable plugs and sockets, and panel-mounted power cable/conductor plugs and sockets used for interconnection

between one piece of electrical equipment and another piece of electrical equipment (by means of a cable or cord assembly involving plugs and sockets on both ends, or a plug and socket on one end and unterminated cable or cord on the other), or between premises wiring and a piece of electrical equipment (by means of a cable or cord assembly involving a socket on the equipment end and unterminated cable or cord on the premises wiring end).

This interconnection is in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

Each cable assembly is provided with means to mechanically secure the plug or socket on either end of the cable assembly to the intended equipment plug or socket. The means used to provide this mechanical securement is constructed as follows:

1. separation shall be possible only with the aid of a tool,

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY FOR USE IN HAZARDOUS LOCATIONS (PVVJ)

2. when not secured, the means shall be captive to the cable assembly, and
3. a marking is provided that is likely to be readily visible after installation that reads, "WARNING - Do Not Connect or Disconnect When Energized," or equivalent.
Note: The warning marking may be on the securement means or on the cable assembly. It may be necessary to provide more than one warning marking for ready visibility.
 Instructions are provided indicating that, should the cable assembly become separated from the intended equipment plug or socket, the part that remains energized is a socket outlet.
 This category does not cover cable assemblies with plugs on both ends, but does cover cable assemblies with multiple sockets.

Product Types

The following products are covered under this category:
Power Cable Assemblies — These assemblies consist of a length of cord or cable as follows:

1. extra-hard-usage cord,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits.

Note: See the following Code references for additional details on these wiring methods:

- For extra-hard-usage cord, see Article 400 of the NEC.
- For instrumentation tray cable (Type ITC), see Article 727 of the NEC.
- For power-limited tray cable (Type PLTC), see Article 725 of the NEC.

The cord or cable is terminated on at least one end with a molded-on or assembled-on plug or socket.

Power Cable Plugs and Sockets — These plugs and sockets are intended to be field wired or molded onto cord or cable as indicated under **Power Cable Assemblies** above, with either a male or female insert. The diameter and the wire size of the field-wired cord or cable to which the plug or socket is intended to be assembled is indicated on the plug or socket, or the smallest unit shipping container.

Panel-mounted Power Cable/Conductor Plugs and Sockets — These plugs and sockets consist of a panel-mounted assembly with either a plug or socket. Each assembly is provided with a means to secure to an enclosure of the industrial machinery.

RATINGS

These power cable assemblies are rated based on the involved cord or cable as follows:

1. extra-hard-usage cord for applications involving circuits operating at 600 V or less and 60 A or less,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits operating at 150 V or less and 5 A or less, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits supplied by a Class 2 or Class 3 power source.

Each power cable assembly and plug and socket is rated in volts and amperes. The electrical ratings are marked on each device or on a flag label affixed to each individual power cable assembly.

These power cable assemblies and plugs and sockets have been investigated for their marked short-circuit-current rating. Power cable assemblies and plugs and sockets may specify a maximum ampere rating, type of overcurrent protective device, or both. Unless otherwise marked, the power cable assemblies and plugs and sockets are intended to be supplied from an overcurrent protective device of the maximum ampere rating permitted by Table 7.2.10.4 of ANSI/NFPA 79.

SPECIAL CONSIDERATIONS

The power cable assemblies and mating plugs and sockets are not intended to be used as a substitute for the fixed wiring methods required by 501.10 of the NEC.

These power cable assemblies and mating plugs and sockets are intended for use only with the Listee's same line of power cable assemblies and mating plugs and sockets covered under this category.

Power cable assemblies and plugs and sockets covered under this category are not intended to make or interrupt current under load conditions.

These devices are intended for indoor use only, unless otherwise so identified.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 Multi-point Interconnection Assembly for Industrial Machinery for Use in Hazardous Locations
 Power Cable Assembly for Industrial Machinery for Use in Hazardous Locations
 Power Cable Plug for Industrial Machinery for Use in Hazardous Locations
 Power Cable Socket for Industrial Machinery for Use in Hazardous Locations

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY FOR USE IN HAZARDOUS LOCATIONS (PVVJ)

The words "Hazardous Locations" may be abbreviated "Haz. Loc." **ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations requirements used to investigate products in this category are contained in UL Subject 2237, "Outline of Investigation for Multi-Point Interconnection Power Cable Assemblies for Industrial Machinery."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Note: The unclassified locations use of the term "fitting" in UL Subject 2237 is equivalent to the hazardous (classified) locations use of the terms "plug" or "socket."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-point Interconnection Assembly for Industrial Machinery for Use in Hazardous Locations," "Power Cable Assembly for Industrial Machinery for Use in Hazardous Locations," "Power Cable Plug for Industrial Machinery for Use in Hazardous Locations" or "Power Cable Socket for Industrial Machinery for Use in Hazardous Locations." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PVVM)

GENERAL

This category covers multi-point interconnection power cable assemblies intended for use in industrial establishments with restricted public access in locations that are classified as a Class I, Zone 2 location. The assemblies may consist of power cable assemblies, power cable plugs and sockets, and panel-mounted power cable/conductor plugs and sockets used for interconnection

between one piece of electrical equipment and another piece of electrical equipment (by means of a cable or cord assembly involving plugs and sockets on both ends, or a plug and socket on one end and unterminated cable or cord on the other), or

between premises wiring and a piece of electrical equipment (by means of a cable or cord assembly involving a socket on the equipment end and unterminated cable or cord on the premises wiring end).

This interconnection is in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

Each cable assembly is provided with means to mechanically secure the plug or socket on either end of the cable assembly to the intended equipment plug or socket. The means used to provide this mechanical securement is constructed as follows:

1. separation shall be possible only with the aid of a tool,
2. when not secured, the means shall be captive to the cable assembly, and
3. a marking is provided that is likely to be readily visible after installation that reads, "WARNING - Do Not Connect or Disconnect When Energized," or equivalent.

Note: The warning marking may be on the securement means or on the cable assembly. It may be necessary to provide more than one

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PVVM)

warning marking for ready visibility.

Instructions are provided indicating that, should the cable assembly become separated from the intended equipment plug or socket, the part that remains energized is a socket outlet.

This category does not cover cable assemblies with plugs on both ends, but does cover cable assemblies with multiple sockets.

Product Types

The following products are covered under this category:

Power Cable Assemblies — These assemblies consist of a length of cord or cable as follows:

1. extra-hard-usage cord,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits.

Note: See the following Code references for additional details on these wiring methods:

For extra-hard-usage cord, see Article 400 of the NEC.

For instrumentation tray cable (Type ITC), see Article 727 of the NEC.

For power-limited tray cable (Type PLTC), see Article 725 of the NEC.

The cord or cable is terminated on at least one end with a molded-on or assembled-on plug or socket.

Power Cable Plugs and Sockets — These plugs and sockets are intended to be field wired or molded onto cord or cable as indicated under **Power Cable Assemblies** above, with either a male or female insert. The diameter and the wire size of the field-wired cord or cable to which the plug or socket is intended to be assembled is indicated on the plug or socket, or the smallest unit shipping container.

Panel-mounted Power Cable/Conductor Plugs and Sockets — These plugs and sockets consist of a panel-mounted assembly with either a plug or socket. Each assembly is provided with a means to secure to an enclosure of the industrial machinery.

RATINGS

These power cable assemblies are rated based on the involved cord or cable as follows:

1. extra-hard-usage cord for applications involving circuits operating at 600 V or less and 60 A or less,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits operating at 150 V or less and 5 A or less, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits supplied by a Class 2 or Class 3 power source.

Each power cable assembly and plug and socket is rated in volts and amperes. The electrical ratings are marked on each device or on a flag label affixed to each individual power cable assembly.

These power cable assemblies and plugs and sockets have been investigated for their marked short-circuit-current rating. Power cable assemblies and plugs and sockets may specify a maximum ampere rating, type of overcurrent protective device, or both. Unless otherwise marked, the power cable assemblies and plugs and sockets are intended to be supplied from an overcurrent protective device of the maximum ampere rating permitted by Table 7.2.10.4 of ANSI/NFPA 79.

SPECIAL CONSIDERATIONS

The power cable assemblies and mating plugs and sockets are not intended to be used as a substitute for the fixed wiring methods required by 505.15 of the NEC.

These power cable assemblies and mating plugs and sockets are intended for use only with the Listee's same line of power cable assemblies and mating plugs and sockets covered under this category.

Power cable assemblies and plugs and sockets covered under this category are not intended to make or interrupt current under load conditions.

These devices are intended for indoor use only, unless otherwise so identified.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Multi-point Interconnection Assembly for Industrial Machinery for Use in Hazardous Locations
- Power Cable Assembly for Industrial Machinery for Use in Hazardous Locations
- Power Cable Plug for Industrial Machinery for Use in Hazardous Locations
- Power Cable Socket for Industrial Machinery for Use in Hazardous Locations

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

388 MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PVVM)

The basic unclassified locations requirements used to investigate products in this category are contained in UL Subject 2237, "Outline of Investigation for Multi-Point Interconnection Power Cable Assemblies for Industrial Machinery."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

Note: The unclassified locations use of the term "fitting" in UL Subject 2237 is equivalent to the hazardous (classified) locations use of the terms "plug" or "socket."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The words "Hazardous Locations" may be abbreviated "Haz. Loc."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MUSICAL INSTRUMENTS (PWHZ)

USE

This category covers electrical devices that produce music under the direct control of the player. This category also covers accessories for use with musical instruments, such as rhythm generators, tone cabinets, music tuners, and the like.

PRODUCT IDENTITY

The following product identity appears on the product:
Musical Instrument
Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Devices that reproduce music from records, magnetic tape or other recording media are covered under Commercial Audio and Radio Equipment, Systems and Accessories (AZJX) and Commercial Phonographs, Tape-playing and Recording Appliances and Accessories (AZQW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 469, "Musical Instruments and Accessories," UL 6500, "Audio/Video and Musical Instrument Apparatus for Household, Commercial, and Similar General Use," or ANSI/UL 60065, "Audio, Video, and Similar Electronic Apparatus – Safety Requirements."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Musical Instrument," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

MUSICAL INSTRUMENTS (PWHZ)

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NEON TRANSFORMERS AND POWER SUPPLIES (PWIK)

USE

This category covers indoor and outdoor use neon transformers and power supplies intended for use with display signs, outline lighting and luminaires employing gas-filled glass tubing identified as neon or electric discharge tubing.

These transformers and power supplies have been investigated for the secondary-circuit ground-fault protection requirements in ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers neon transformer and power-supply accessories intended for use with specific neon transformers and power supplies.

PRODUCT MARKINGS

Transformers and power supplies covered under this category are marked "Indoors," "Outdoors," or "Weatherproof" or "WP." Products marked "Indoors" are only suitable for use indoors, and products marked "Outdoors" are suitable for use indoors or outdoors sheltered from rain, snow and the like by being located within a sign body, enclosure and the like. Products marked "Weatherproof" or "WP" do not need to be additionally sheltered from rain, snow and the like.

Transformers and power supplies covered under this category are marked with a Type number from 2 to 8 in association with the location designation "Indoors," "Outdoors," "Weatherproof" or "WP." These Type numbers identify particular construction features associated with a particular transformer or power supply as identified below:

- **Type 2** – Neon supply with input and output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 3** – Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system, and with output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 4** – Neon supply with input and output terminals or leads enclosed and intended for connection to a permanent wiring system.
- **Type 5** – Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system and provided with integral receptacles for output connection.
- **Type 6** – Cord-connected neon supply provided with integral receptacles for output connection.
- **Type 7** – Cord-connected neon supply with output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 8** – Cord-connected neon supply with enclosed output terminals or leads.

These Type designations do not relate in any way to general enclosure designations as noted in Electrical Equipment for Use in Ordinary Locations (AALZ).

Transformers and power supplies are also marked with a model designation and may be marked with an optional designation 2161HX, 2161KX, 2161MH or 2161WX. The optional designations provide information on the construction of the transformer and power supply for sign manufacturers and installers to use for ordering and replacement purposes.

Transformers and power supplies marked "For Moving Vehicle Use Only" are intended for use only in moving vehicles and not for use in a freestanding sign, or building-mounted sign or outline lighting product.

Neon transformer and power-supply accessories are marked "For Use With XXX Neon Transformer" or "For Use With XXX Neon Power Supply," where "XXX" indicates the model number, catalog number, part number, or other specific identifier of the neon transformer or neon power supply.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Neon Power Supply
Neon Power-supply Accessory
Neon Transformer
Neon Transformer Accessory

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2161, "Neon Transformers and Power Supplies."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Neon Transformer," "Neon Power Supply," "Neon Transformer Accessory" or "Neon Power Supply Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NETWORK-POWERED BROADBAND COMMUNICATIONS CABLE (PWIP)

USE

This category covers network-powered broadband communications cable, which is a jacketed single-conductor coaxial cable or a multiple-conductor jacketed cable, consisting of a combination of coaxial members, insulated conductors and/or optic fiber members. The cable is intended for use in low-power and medium-power circuits in accordance with Article 830 of ANSI/NFPA 70, "National Electrical Code" (NEC). All Types, with the exception of Types BLU and BMU, have been investigated for use where exposed to the direct rays of the sun.

PRODUCT MARKINGS

Network-powered broadband communications cable is identified by markings on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

BMU — Indicates medium-power cable intended for outdoor underground use in accordance with Section 830.151(C) of the NEC.

BM — Indicates medium-power cable intended for general use within buildings in accordance with Section 830.151(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test described in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," or as an alternative, the damage height of this cable does not exceed 4 ft 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test also described in UL 1685.

BMR — Indicates medium-power cable intended for use within buildings in vertical shafts in accordance with Section 830.151(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested in accordance with ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

BLP — Indicates low-power cable intended for use in ducts or plenums or other spaces used for environmental air in accordance with Section 830.154(B) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame-propagation distance of 5 ft, when tested in accordance with ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

BLR — Indicates low-power cable intended for use within buildings in vertical shafts in accordance with Section 830.154(C) of the NEC. The flame propagation height of this cable is less than 12 ft. when tested in accordance with UL 1666.

BL — Indicates low-power cable intended for general use within buildings in accordance with Section 830.154(D) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test described in UL 1685, or as an alternative, the damage height of this cable does not exceed 4 ft. 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test also described in UL 1685.

BLU — Indicates low-power cable intended for outdoor underground use in accordance with Section 830.154(D)(3) of the NEC.

BLX — Indicates low-power cable intended for limited use within buildings in accordance with Sections 830.154 (D)(2), (4) and (5) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

Cable that contains one or more optical-fiber members has the suffix "OF" added to the above.

Cable that complies with the Limited Smoke Requirements specified in UL 1685 is surface marked with the suffix "LS."

Cable marked "-30C," "-40C," "-50C," "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

PRODUCT IDENTITY

The following product identity appears on the product:
Network-powered Broadband Communications Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2261, "Outline of Investigation for Cables for Network-Powered Broadband Communications Systems."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

**Alternate UL Mark
UL MARK**

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Network-powered Broadband Communications Cable."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-SHEATHED CABLE (PWVX)

USE

This category covers Types NM-B and NMC-B nonmetallic-sheathed cable, rated 600 V, intended for use in accordance with Article 334 of ANSI/NFPA 70, "National Electrical Code" (NEC), and certified in copper sizes 14 to 2 AWG inclusive and aluminum or copper-clad aluminum sizes 12 to 2 AWG inclusive.

This cable contains conductors rated 90°C; however, the ampacities of the cable are those of 60°C conductors as specified in Article 334 and Table 310.15(B)(16) of the NEC.

PRODUCT MARKINGS

Cable with copper-clad aluminum conductors is surface marked "AL (CU-CLAD)" or "Cu-clad Al," and cable with aluminum conductors is surface marked "AL."

Wire and cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

Cable suitable for use in cable trays is appropriately marked. Cable marked for cable tray use may also have a supplementary sunlight resistant marking.

Cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked "ST1."

PRODUCT IDENTITY

One of the following product identities appears on the product:
Nonmetallic-sheathed Aluminum Cable (for nonmetallic-sheathed cable that contains aluminum conductors)

Nonmetallic-sheathed Cable (for nonmetallic-sheathed cable that contains copper or copper-clad aluminum conductors)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 719, "Nonmetallic-Sheathed Cables."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Cer-

tification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Nonmetallic-sheathed cable that contains copper or copper-clad aluminum conductors has the product name "Nonmetallic-sheathed Cable"; nonmetallic-sheathed cable that contains aluminum conductors has the product name "Nonmetallic-sheathed Aluminum Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-SHEATHED-CABLE CONNECTORS (PXJV)

GENERAL

This category covers connectors intended for use with nonmetallic-sheathed cable. These connectors are also suitable for use with multiconductor underground feeder and branch-circuit cable where used in dry locations unless otherwise indicated on the carton. These connectors are intended for installation and use in accordance with the following information and the limitations specified in Nonmetallic-sheathed Cable (PWVX).

All male threaded fittings have only been investigated for use with lock-nuts.

Single Cable — If single-conductor Type UF cable is terminated with a fitting not specifically recognized for use with single-conductor cable, special care should be taken to ensure it is properly secured and not subject to change.

The individual certifications may have details about the size and number of the nonmetallic-sheathed cable each connector will secure.

Reusability — Connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

MARKINGS

Connectors which are also suitable for use with service-entrance cable, flexible nonmetallic tubing or flexible cord are so indicated on the device or carton.

Except for duplex connectors or when otherwise marked on the carton to indicate connecting of more than one cable or cord, the connectors covered under this category have been investigated for connecting one cable or cord only.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Nonmetallic-sheathed-cable Connector
- N.M. Cable Connector

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Connectors covered under Armored Cable Connectors (AWSX), Conduit Fittings (DWT) and Power and Control Tray Cable Connectors (QPOZ) are also suitable for use with nonmetallic-sheathed cable when specifically indicated on the device or carton.

Connectors suitable for flexible cord only are covered under Outlet Bushings and Fittings (QCRV).

ADDITIONAL INFORMATION

For additional information, see Nonmetallic-sheathed Cable (PWVX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings." Products not identified with a specific standard reference are investigated to the 6th ed. (issued July 13, 2012; last revised June 4, 2014). All other products are identified by the specific standard/edition/date in the individual certifications.

UL MARK

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Nonmetallic-sheathed-cable Connectors (PXJV)—Continued

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Sheathed Cable Connector" (or "N.M. Cable Connector"), or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC EXTENSIONS (PXXT)

CONCEALABLE NONMETALLIC EXTENSIONS (PXYC)

USE AND INSTALLATION

This category covers assemblies of two, three or four insulated circuit conductors within a nonmetallic jacket, an extruded thermoplastic covering, or a sealed nonmetallic covering. These assemblies are intended for installation in accordance with Article 382 of ANSI/NFPA 70, "National Electrical Code." These conductors are intended to be mounted directly on the surface of walls or ceilings, and concealed with paint, texture, joint compound, plaster, wallpaper, tile, wall paneling, or similar finish materials.

Concealable nonmetallic extensions of a multilayer flat conductor design, including one or more ungrounded conductors enclosed by a layer of ground conductors (inner sectioned layers), and an overall layer of ground conductors (outer sectioned layers). All flat conductors are copper and are equivalent to 14 AWG or 12 AWG conductor sizes. The starting/source tap device for the extension provides the following protection for all load-side extensions and devices:

1. Supplementary overcurrent protection
2. Level of protection equivalent to a Class A GFCI
3. Level of protection equivalent to a portable GFCI
4. Line and load-side miswire protection
5. Protection from the effects of arc faults

PRODUCT IDENTITY

The following product identity appears on the product:

- Concealable Nonmetallic Extension

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

- ANSI/UL 183, "Manufactured Wiring Systems"
- ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings"
- ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices"
- ANSI/UL 746C, "Polymeric Materials – Use in Electrical Equipment Evaluations"
- ANSI/UL 1077, "Supplementary Protectors for Use in Electrical Equipment"
- ANSI/UL 943, "Ground-Fault Circuit-Interrupters"
- ANSI/UL 1699, "Arc-Fault Circuit-Interrupters"
- UL 991, "Tests for Safety-Related Controls Employing Solid-State Devices"
- ANSI/UL 1998, "Software in Programmable Components"

In addition, one or more of the following may be used:

- ANSI/UL 467, "Grounding and Bonding Equipment" (for miscellaneous conductors in the equipment grounding conductor for the grounding path)
- ANSI/UL 498, "Attachment Plugs and Receptacles" (for portions of the system serving as receptacle outlets and plugs)

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Concealable Nonmetallic Extensions (PXYS)—Continued

Alternate UL Mark
UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Concealable Nonmetallic Extension."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-EXTENSION FITTINGS (PYYZ)

USE

This category covers attachment-plug caps, receptacles for attachment plugs, and end caps for nonmetallic surface extensions, and wiring compartments, entrance bushings, bonding connectors, hangers, terminal fittings, support fittings, receptacles and lampholders for aerial cable.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- End Cap
- Nonmetallic Extension Fitting
- NM Extension Ftg.

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings," ANSI/UL 183, "Manufactured Wiring Systems," and ANSI/UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Extension Fitting" (or "NM Extension Ftg.") or "End Cap," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC SURFACE EXTENSIONS (PZMX)

USE AND INSTALLATION

This category covers assemblies of two insulated circuit conductors with or without a grounding conductor within a nonmetallic jacket or extruded thermoplastic covering, intended for installation in accordance with Article 382 of ANSI/NFPA 70, "National Electrical Code." Assemblies without a grounding conductor are marked "Intended for replacement use only."

PRODUCT IDENTITY

The following product identity appears on the product:
Nonmetallic Surface Extension

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings," ANSI/UL 183, "Manufactured Wiring Systems," and ANSI/UL 498, "Attachment Plugs and Receptacles."

Nonmetallic Surface Extensions (PZMX)—Continued

UL MARK

Alternate UL Mark
UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Surface Extension."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-SHEATHED CABLE INTERCONNECTORS (QAAV)

GENERAL

This category covers self-contained interconnectors employing pressure cable connectors, insulation displacement or insulation piercing connectors for splicing or tapping nonmetallic (NM) sheathed cable. These interconnectors are intended for use in exposed or concealed locations in accordance with the following Articles of ANSI/NFPA 70, "National Electrical Code":

- Article 545, *Manufactured Buildings*
- Article 550, *Mobile Homes, Manufactured Homes, and Mobile Home Parks*
- Article 551, *Recreational Vehicles and Recreational Vehicle Parks*
- Article 334, *Nonmetallic-Sheathed Cable: Types NM, NMC, and NMS (for tap devices)*

These devices have been investigated for equivalency to Type NM cable in insulation and temperature rise, and for capability to withstand fault currents, vibration and mechanical shock that may occur during transport of the units in which they are used.

PRODUCT MARKINGS

The devices are marked with the Listee's name or identification, the catalog number or equivalent, and complete electrical ratings.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- N.M. Cable Interconnector
- Nonmetallic-sheathed-cable Interconnector

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2256, "Outline of Investigation for Nonmetallic Sheathed Cable Interconnects."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark
UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Sheathed Cable Interconnector" (or "N.M. Cable Interconnector"), or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL SEATING SYSTEMS (QAHU)

GENERAL

This category covers single- or multiple-seating systems that may be provided with an integral table and contain electrical accessories, such as an electrical distribution system, lighting and receptacle outlets. The seating system may also be provided with channels for routing communication wiring. The seating is intended to be permanently mounted to the building structure.

This category covers only the electrical hazards associated with the product.

PRODUCT IDENTITY

The following product identity appears on the product:

Powered Seating System

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Electrical accessories designed for field installation, such as receptacles, electrical distribution systems, power distribution elements, etc., are covered under Office Furnishings (QAWZ) and are marked to identify the specific seating system with which they have been investigated for use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1286, "Office Furnishings," ANSI/UL 1598, "Luminaires," ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products," and/or ANSI/NFPA 70, "National Electrical Code."

Where indicated in the individual certifications, commercial seating systems have also been investigated in accordance with one or more of the following standards:

1. State of California Department of Consumer Affairs Bureau of Home Furnishings and Thermal Insulation, Technical Bulletin 117, "The Test Procedure and Apparatus for Testing the Flame Retardance of Resilient Filling Materials Used in Upholstered Furniture" (2000)
2. For flammability in accordance with State of California Department of Consumer Affairs Bureau of Home Furnishings and Thermal Insulation, Technical Bulletin 133, "The Flammability Test Procedure for Seating Furniture for Use in Public Occupancies" (1991)
3. For strength and durability in accordance with ANSI/BIFMA No. X5.4, "The Standard for Office Furnishing Lounge Seating" (1997)

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO ELECTRICAL HAZARD ONLY

Where indicated in the individual certifications, these products are also marked with one or more of the following statements:

ALSO CERTIFIED TO

THE STATE OF CALIFORNIA DEPARTMENT OF CONSUMER AFFAIRS
BUREAU OF HOME FURNISHINGS AND THERMAL INSULATION
TECHNICAL BULLETIN 117

ALSO CERTIFIED TO

THE STATE OF CALIFORNIA DEPARTMENT OF CONSUMER AFFAIRS
BUREAU OF HOME FURNISHINGS AND THERMAL INSULATION
TECHNICAL BULLETIN 133

ALSO CERTIFIED TO

THE STANDARD FOR OFFICE FURNITURE LOUNGE SEATING
ANSI/BIFMA No. X5.4

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

POWERED SEATING SYSTEM* FOR ELECTRICAL HAZARD ONLY

Control No.

* or other appropriate product name as shown in the individual Classifications

Where indicated in the individual Classifications, the Classification Mark will also include one or more of the following statements:

ALSO CLASSIFIED IN ACCORDANCE WITH
THE STATE OF CALIFORNIA DEPARTMENT OF CONSUMER AFFAIRS
BUREAU OF HOME FURNISHINGS AND THERMAL INSULATION
TECHNICAL BULLETIN 117 (2000)

and/or

ALSO CLASSIFIED IN ACCORDANCE WITH
THE STATE OF CALIFORNIA DEPARTMENT OF CONSUMER AFFAIRS
BUREAU OF HOME FURNISHINGS AND THERMAL INSULATION
TECHNICAL BULLETIN 133 (1991)

and/or

ALSO CLASSIFIED IN ACCORDANCE WITH
THE STANDARD FOR OFFICE FURNITURE LOUNGE SEATING
ANSI/BIFMA No. X5.4-1997

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE APPLIANCES AND BUSINESS EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (QAVS)

GENERAL

This category covers equipment and appliances normally used in business establishments classified as hazardous locations. The equipment and appliances may be electromechanical and/or electronic.

Intrinsically safe equipment is so marked on the product.

To maintain the intrinsically safe features of battery-operated appliances, only batteries of the type and size indicated on the product should be used.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Business Equipment for Use in Hazardous Locations
Office Appliance for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Office Appliance for Use in Hazardous Locations" or "Business Equipment for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE FURNISHINGS (QAWZ)

USE AND INSTALLATION

This category covers office furnishings that consist of panels, study carrels, work stations and pedestal-style systems that may be mechanically interconnected to form an office furnishing system to be installed in accordance with Article 605 of ANSI/NFPA 70, "National Electrical Code" (NEC). They may be provided with an electrical distribution system, including switches and receptacles. They may contain channels for routing communication cable within the system components separate from power-circuit raceways. The systems may include filing cabinets, desks, work surfaces, shelves, storage units, etc., that have a particular electrical or mechanical function unique to an office furnishing system.

Products specifically designed and arranged for field installation in office furnishings such as lighting units, clocks, work surfaces, shelves, etc., are

covered as accessories under Office Furnishing Accessories Certified for Use with Specified Equipment (QAXE) and are marked to identify the specific office furnishing with which they have been investigated.

The surface-burning characteristics of building materials employed in these assemblies is judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame-spread rating of 200 or less and 450 smoke index or less unless otherwise marked.

Office furnishing electrical systems may be suitable for connection to optional standby power systems in accordance with the NEC.

Office furnishing electrical systems are available in single-phase and three-phase wiring systems and may provide multi-circuit branch circuits to an office furnishing. Some office furnishings are connected to more than one source of supply, such as an uninterruptible power supply, in addition to the building service-entrance power.

When the office furnishing electrical system is supplied with hospital-grade receptacles, the office furnishing electrical system is not suitable for use in general patient care areas or critical patient care areas. The electrical system has not been investigated for use where Article 517 of the NEC requires hospital-grade components and redundant grounding systems.

REBUILT PRODUCTS

This category also covers office furnishings and office furnishing accessories that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt office furnishings and office furnishing accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt office furnishings and office furnishing accessories are subject to the same requirements as new office furnishings and office furnishing accessories.

INSTRUCTIONS AND PRODUCT MARKINGS

Finished surfaces have a flame-spread rating of 200 or less. When a smoke-developed rating exceeds 450, the system is marked "Smoke Developed Index Over 450."

Office furnishings are marked with one of the following type designations:

Type I — A system that includes all parts and contains pre-wired modular raceways and accessories necessitating only quick-connect type of electrical interconnections. A Type I system may be shipped with the accessories installed in the panel, or, where not factory installed, the accessory is intended for field installation and marked for use in the system. Means for permanent wiring connections to the branch-circuit supply are provided.

Type II — A system that provides raceways and devices for routing and termination of wiring. All wiring is installed in the field.

Type III — A system that is not intended to be wired and has no provision for routing and termination of wiring.

Each office furnishing accessory (work surface, cabinet or electrical system) that is shipped separately from the major office furnishing unit to which it is to be connected is marked "For Use with Office Furnishing System Series _____," in which the appropriate series or catalog number is designated. When separable components are factory assembled and shipped together, only the complete assembly and not the component is marked.

Each top- and base-feed wiring assembly is marked with a diagram or the equivalent, indicating the methods of connection to the branch circuit and the electrical rating.

Each top- and base-feed wiring assembly is marked with "WARNING" and the following or equivalent statement: "Risk of Fire or Electric Shock. It is possible for this office furnishing system to be connected to more than one source of supply. Disconnect all sources prior to any servicing."

Each convenience receptacle is marked by a letter, number, color, or similar designation to indicate the circuit in the system to which the receptacle is connected. The identification is consistent throughout any one office furnishing electrical system and with any markings on the diagram for the branch-circuit connections.

A wiring-system jumper (manufactured wiring system to office furnishing wiring system) is marked to identify the manufactured wiring system with which the jumper is intended to be used.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Office Furnishing
Office Furnishing Accessory

For rebuilt products, the word "Rebuilt" precedes the product identity.

RELATED PRODUCTS

Partitions that extend to the ceiling or used to support the building structure are covered under Sections and Units (QOXX).

Composite panels certified with respect to the NEC and/or one or more model building codes, plumbing codes, state building codes or local building codes are covered under Composite Panels (QRSY).

Lighting units intended for use with office furnishings are covered under Office Furnishing Lights (QAXB).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1286, "Office Furnishings."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Office Furnishing" or "Office Furnishing Accessory."

For rebuilt products, the word "Rebuilt" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE FURNISHING LIGHTS (QAXB)

GENERAL

This category covers lights intended for use with office furnishings when installed in accordance with Articles 410 and 605 of ANSI/NFPA 70, "National Electrical Code." This category covers both freestanding and mounted lights that may be electrically or mechanically connected to an office furnishing. Products specifically designed and arranged for use with an individual design of office furnishing are marked to identify the specific office furnishing with which they have been investigated.

Products that require electrical assembly in the field are covered as kits or light accessories under the individual certifications. Kits and light accessories are completely wired to the extent permitted by the intended field installation, with all splices and connections completed and with all electrical components mounted.

A kit forms a complete office furnishing light when assembled in accordance with the instructions provided.

A light accessory and the required office furnishing or a combination of light accessories form a complete office furnishing light when assembled in accordance with the instructions provided.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

REBUILT PRODUCTS

This category also covers office furnishing lights that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt office furnishing lights are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt office furnishing lights are subject to the same requirements as new office furnishing lights.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Office Furnishing Light
Office Furnishing Light Accessory
Office Furnishing Light Kit

For rebuilt products, the word "Rebuilt" precedes the product identity.

RELATED PRODUCTS

Office furnishing lights investigated to ANSI/UL 153, "Portable Electric Luminaires," may also be covered under Luminaires, Portable (QOWZ). Office furnishing light accessories investigated to ANSI/UL 153 may also be covered under Portable Luminaire Kits and Subassemblies (QPAU).

Office furnishing light accessories investigated to ANSI/UL 1598, "Luminaires," may also be covered under Luminaire Fittings (IFFX).

ADDITIONAL INFORMATION

For additional information, see Office Furnishings (QAWZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 153, "Portable Electric Luminaires," ANSI/UL 1598, "Luminaires," and ANSI/UL 1286, "Office Furnishings."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Office Furnishing Lights (QAXB)—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Office Furnishing Light," "Office Furnishing Light Kit," "Office Furnishing Light Accessory" or "Rebuilt Office Furnishing Light."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE FURNISHING ACCESSORIES CERTIFIED FOR USE WITH SPECIFIED EQUIPMENT (QAXE)

USE AND INSTALLATION

This category covers office furnishing accessories, such as work surfaces and shelves, intended for field installation in specific combinations that have been investigated for use with the specific office furnishing systems.

These accessories have been investigated for use with other manufacturers' certified office furnishings, as indicated in the Certification Mark or the referenced compatibility list.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Desk
- Filing Cabinet
- Shelf
- Storage Unit
- Work Station

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1286, "Office Furnishings."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR USE WITH SPECIFIED EQUIPMENT

FOR USE WITH UL-CERTIFIED [manufacturer's name and model no(s)] OFFICE FURNISHING PANEL SYSTEM

or

FOR USE WITH SPECIFIED EQUIPMENT

FOR CATALOG NUMBERS OF COMPATIBLE EQUIPMENT, REFER TO PUBLICATION NO. ___ PROVIDED WITH THIS PRODUCT. IF ADDITIONAL INFORMATION IS NECESSARY, CONTACT THE FACTORY.

The referenced publication is a compatibility list that tabulates the company names, catalog numbers and electrical ratings of the certified accessories, and the company name(s) and catalog number(s) of the applicable UL-certified products with which the accessories have been investigated. One copy of the compatibility list and the installation instructions are provided with each accessory.

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*] FOR USE WITH SPECIFIED EQUIPMENT FOR USE WITH UL LISTED [manufacturer's name and model no(s)] OFFICE FURNISHING PANEL SYSTEM

Control No.

or

[PRODUCT IDENTITY*] FOR USE WITH SPECIFIED EQUIPMENT FOR CATALOG NUMBERS OF COMPATIBLE EQUIPMENT, REFER TO PUBLICATION NO. ___ PROVIDED WITH THIS PRODUCT. IF ADDITIONAL INFORMATION IS NECESSARY, CONTACT THE

FACTORY.

Control No.

* as shown in the individual Classifications

The referenced publication is a compatibility list that tabulates the company names, catalog numbers and electrical ratings of the Classified accessories, and the company name(s) and catalog number(s) of the applicable UL Listed products with which the accessories have been investigated. One copy of the compatibility list and the installation instructions are provided with each accessory.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE (QAYK)

USE AND INSTALLATION

This category covers optical fiber cable which is a jacketed cable for use within buildings in accordance with Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC). Where optical fiber is installed in a laser system, the system shall comply with the ANSI Z136 laser system safety standards.

PRODUCT MARKINGS

Optical fiber cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

OFC — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in accordance with Section 770.154(C) of the NEC. This cable does not spread fire to the top of the tray when tested as described under UL Flame Exposure (smoke measurements are not applicable) in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

OFN — This cable is the same as Type OFC except it contains no metallic members and no other electrical conductive materials.

OFNG — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested as described under FT4/IEEE 1202, "Type of Flame Exposure" (smoke measurements are not applicable) in UL 1685.

OFNG — This cable is the same as Type OFCG except it contains no metallic members and no other electrically conductive materials.

OFNR — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in vertical runs in a shaft in accordance with Section 770.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

OFNRP — This cable is the same as Type OFNR except it contains no metallic members and no other electrically conductive materials.

OFNRP — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in ducts or plenums or other spaces used for environmental air in accordance with Section 770.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

OFNRP — This cable is the same as Type OFNRP except it contains no metallic members and no other electrically conductive materials.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

Cable that complies with the Limited Smoke Requirements specified in UL 1685 is surface marked with the suffix "LS."

Cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

PRODUCT IDENTITY

The following product identity appears on the product:

Optical Fiber Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1651, "Optical Fiber Cable."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

Additional Certification Markings

Cable also certified to a performance specification under Optical Fiber Cable Certified to National or International Specifications (QAZI) has the marking "Also Certified to [Specification name and/or number]" together with the Certification Mark information on the tag, reel or smallest unit container.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Cable."

The Listing Mark for this category requires the use of a holographic label.

Cable also Verified to a performance specification under Optical Fiber Cable Verified in Accordance with National or International Specifications (QAZI) has the marking "Also Verified [Specification name and/or number]" together with the Listing Mark information on the tag, reel or smallest unit container.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE, FIELD ASSEMBLED (QAZD)

USE AND INSTALLATION

This category covers field-assembled optical fiber cable, which is an on-site assembly of one or more optical fiber units and an optical fiber jacket. Field-assembled optical fiber cable is intended for installation in buildings in accordance with Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC). The optical fiber jacket is installed in a manner similar to conduit or raceway. Once the jacket is installed, the optical fiber units are inserted into the jacket, completing the assembly.

Laser systems in which optical fiber is installed comply with the following Laser Institute of America safety standards:

- ANSI/LIA Z136.1, "Safe Use of Lasers"
- ANSI/LIA Z136.2, "Safe Use of Optical Fiber Communication Systems Utilizing Laser Diode and LED Sources"
- ANSI/LIA Z136.3, "Safe Use of Lasers in Health Care Facilities"
- ANSI/LIA Z136.4, "Recommended Practice for Laser Safety Measurements for Hazard Evaluation"
- ANSI/LIA Z136.5, "Safe Use of Lasers in Educational Institutions"
- ANSI/LIA Z136.6, "Safe Use of Lasers Outdoors"

PRODUCT MARKINGS

Optical fiber cable is identified by a marking on the surface of the jacket. This marking includes the Listee's name and catalog designation and one of the following Type designations:

OFC — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. This cable does not spread fire to the top of the tray when tested as described under UL Flame Exposure (smoke measurements are not applicable) in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

OFN — This cable is the same as Type OFC except it contains no metallic members and no other electrical conductive materials.

OFCP — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested as described under FT4/IEEE 1202, "Type of Flame Exposure" (smoke measurements are not applicable) in UL 1685.

OFNG — This cable is the same as Type OFCP except it contains no metallic members and no other electrically conductive materials.

Optical Fiber Cable, Field Assembled (QAZD)—Continued

OFNR — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in vertical runs in a shaft in accordance with Section 770.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

OFNP — This cable is the same as Type OFNR except it contains no metallic members and no other electrically conductive materials.

OFCP — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in ducts or plenums or other spaces used for environmental air in accordance with Section 770.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

OFNP — This cable is the same as Type OFCP except it contains no metallic members and no other electrically conductive materials.

Cable marked "Sunlight Resistant" (or "Sun Res") may be exposed to the direct rays of the sun.

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged includes the following: "For Use Only with Optical Fiber Units, Cat. No. ____, manufactured by [company name]."

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber units are packaged includes the following: "[Company name] Optical Fiber Unit, For Use Only With Optical Fiber Jacket Cat. No. ____, manufactured by [company name]."

PRODUCT IDENTITY

The following product identity appears on the product:
Field-assembled Optical Fiber Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1651, "Optical Fiber Cable."

UL MARK

The UL symbol on the optical fiber jacket and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the optical fiber jacket is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the optical fiber jacket and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Field Assembled Optical Fiber Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (QAZI)

GENERAL

This category covers data transmission optical fiber cable whose signal transmission, environmental and/or mechanical performance characteristics have been investigated in accordance with one or more of the applicable U.S. national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications. This cable is not necessarily investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

PRODUCT CATEGORIES BY CATEGORY CODE

REQUIREMENTS

The performance specifications used to investigate products in this category are contained in Telcordia GR-20-CORE, "Generic Requirements for Optical Fiber and Optical Fiber Cable" (Issue 2 July 1998). Other performance specifications, applicable to optical fiber cable, may also be used by UL in Verification investigations.

UL MARK

The UL symbol with the word "VERIFIED" on the product and the Verification Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Optical Fiber Cable," the Specification name(s) and/or number(s), and the date(s) of the Specification(s).

For optical fiber cable which is also Listed under Optical Fiber Cable (QAYK), the marking includes the appropriate Listing Mark and the text "Also Verified [Specification name(s) and/or number(s), date(s) of Specification(s)]."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER/COMMUNICATIONS/SIGNALING/COAXIAL CABLE RACEWAY (QAZM)

USE AND INSTALLATION

This category covers raceway and fittings for installation of conductive and nonconductive optical fiber cable, communications cable, power-limited fire-alarm cable, signaling cable and coaxial cable in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). This raceway is intended for installation and use in accordance with the following information. The raceway is only suitable for the installation of the optical fiber, communications cable, signaling cable and coaxial cable noted in the following information. Individual raceway systems differ in their construction and, therefore, their components are not interchangeable with other raceway or fittings of other systems. This category includes pliable lengths, rigid straight sections, elbows, bends and fittings such as expansion joints, female and male adapters, and couplings.

Pliable raceway is a raceway that can be bent by hand without the use of tools. The smallest radius of the curve of the inner edge of any bend to which the raceway may be bent without cracking either on the outer surface or internally is not less than 2-1/2 times the outside diameter of the raceway.

A raceway marked "Plenum" is suitable for use in ducts, plenums or other spaces used for environmental air in accordance with the NEC when used to enclose optical fiber cable marked "OFNP" or "OFCP," communications cable marked "CMP" or "CMP-OF," power-limited fire-alarm cable marked "FPLP" or "FPLR," signaling cable marked "CL2P" or "CL3P," and coaxial cable marked "CATVP." This raceway exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame-spread distance of 5 ft when tested in accordance with the Test for Flame Propagation and Smoke-Density Values (Plenum) in ANSI/UL 2024, "Signaling, Optical Fiber and Communications Raceways and Cable Routing Assemblies." This raceway is identified by a marking on the surface of the raceway or on a marker tape indicating "Plenum." A raceway marked "Plenum" is also suitable for installation in risers when used to enclose optical fiber cable marked "OFNP" or "OFNR," communications cable marked "CMP," "CMP-OF," "CMR" or "CMR-OF," power-limited fire-alarm cable marked "FPLP" or "FPLR," signaling cable marked "CL2P," "CL3P," "CL2R" or "CL3R," and coaxial cable marked "CATVP" or "CATVR," and general-purpose use when used to enclose optical fiber cable marked "OFNP," "OFCP," "OFNR," "OFNR," "OFNR," "OFNG" or "OFN," communications cable marked "CMP," "CMP-OF," "CMR," "CMR-OF," "CMG," "CMG-OF," "CM" or "CM-OF," power-limited fire-alarm cable marked "FPLP," "FPLR" or "FPL," signaling cable marked "CL2P," "CL3P," "CL2R," "CL3R," "CL2," "CL3," "CL2X" or "CL3X," and coaxial cable marked "CATVP," "CATVR," "CATV" or "CATVX."

A raceway marked "Riser" is suitable for installation in risers in accordance with the NEC when used to enclose optical fiber cable marked "OFNP," "OFCP," "OFNR" or "OFNR," communications cable marked "CMP," "CMP-OF," "CMR" or "CMR-OF," power-limited fire-alarm cable marked "FPLP" or "FPLR," signaling cable marked "CL2P," "CL3P," "CL2R" or "CL3R," and coaxial cable marked "CATVP" or "CATVR." This raceway has fire-resistant characteristics capable of preventing the carrying

of fire from floor to floor. This raceway meets the test requirements of the Test for Flame Propagation (Riser) in ANSI/UL 2024. This raceway is identified by a marking on the surface of the raceway or on a marker tape indicating "Riser." A raceway marked "Riser" is also suitable for general-purpose use when used to enclose optical fiber cable marked "OFNP," "OFNR," "OFNG" or "OFN," communications cable marked "CMP," "CMP-OF," "CMR," "CMR-OF," "CMG," "CMG-OF," "CM" or "CM-OF," power-limited fire-alarm cable marked "FPLP," "FPLR" or "FPL," signaling cable marked "CL2P," "CL3P," "CL2R," "CL3R," "CL2," "CL3," "CL2X" or "CL3X," and coaxial cable marked "CATVP," "CATVR," "CATV" or "CATVX."

A raceway with neither the marking "Plenum" nor "Riser" is suitable for general-purpose use, with the exception of risers, plenums, and other spaces used for environmental air when used to enclose optical fiber cable marked "OFNP," "OFCP," "OFNR," "OFNR," "OFNG," "OFNG," "OFNG," "OFNG" or "OFN," communications cable marked "CMG," "CMG-OF," "CM," "CM-OF," "CMR," "CMR-OF," "CMP" or "CMP-OF," power-limited fire-alarm cable marked "FPLP," "FPLR" or "FPL," signaling cable marked "CL2P," "CL3P," "CL2R," "CL3R," "CL2," "CL3," "CL2X" or "CL3X," and coaxial cable marked "CATVP," "CATVR," "CATV" or "CATVX." This raceway is resistant to the spread of fire when tested in accordance with the Vertical-Tray Flame Test (General Use) in ANSI/UL 2024.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Coaxial Cable Raceway
- Communications Cable Raceway
- Optical Fiber/Communications/Signaling/Coaxial Cable Raceway
- Optical Fiber Raceway
- Signaling Cable Raceway

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (QALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2024, "Cable Routing Assemblies and Communications Raceways."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol and the product name "Optical Fiber Raceway," "Communications Cable Raceway," "Signaling Cable Raceway," "Coaxial Cable Raceway" or "Optical Fiber/Communications/Signaling/Coaxial Cable Raceway" on the raceway, and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the appropriate product names as indicated above.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER RACEWAY ASSEMBLIES (QAZQ)

GENERAL

This category covers raceway assemblies intended for the installation of conductive and nonconductive optical fiber cable in accordance with ANSI/NFPA 70, "National Electrical Code." These raceway assemblies are intended for installation and use in accordance with the following information. The raceway may be provided with multiple inner ducts that are assembled before shipment. Raceway systems differ in their inside and outside diameters and, therefore, are not interchangeable with other conduit or raceway systems. This category includes straight sections, elbows, bends, and fittings intended to be secured together by cement.

The raceway assemblies are designed for use under the following conditions, as indicated in the Certification Mark: (1) direct burial with or without being encased in concrete, (2) aboveground, or both (1) and (2).

The transition from an optical fiber raceway system to another conduit or raceway system has not been investigated.

The raceway system components have not been investigated for their ability to withstand exposure to reagents, unless specifically marked.

Optical Fiber Raceway Assemblies (QAZQ)—Continued

Aboveground raceway assemblies are suitable for exposed work where not subjected to physical damage and where expansion fittings are not necessary.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Optical Fiber Raceway Assembly, Aboveground, Underground Direct Burial and Concrete Encasement
Optical Fiber Raceway Assembly, Underground
Optical Fiber Raceway Assembly, Underground Direct Burial and Concrete Encasement
Optical Fiber Raceway Assembly, Underground for Concrete Encasement Only

ADDITIONAL INFORMATION

For additional information, see Optical Fiber/Communications Cable Raceway (QAZM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 2024, "Cable Routing Assemblies and Communications Raceways," and ANSI/UL 651, "Schedule 40 and 80 Rigid PVC Conduit and Fittings."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Optical Fiber Raceway Assemblies, Underground," "Optical Fiber Raceway Assemblies, Underground for Concrete Encasement Only," "Optical Fiber Raceway Assemblies, Underground Direct Burial and Concrete Encasement" or "Optical Fiber Raceway Assemblies, Aboveground, Underground Direct Burial and Concrete Encasement."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OPTICAL FIBER/COMMUNICATIONS/
SIGNALING/COAXIAL CABLE
OUTLET BOXES (QAZR)**

USE AND INSTALLATION

This category covers outlet boxes and other device-mounting products intended to support outlets for use with or without raceways and fittings that contain nonconductive optical fiber cable, communications cable, signaling cable, and coaxial cable. These products are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code." The products and raceways are only suitable for the installation of the optical fiber, communications cable, signaling cable, and coaxial cable. Individual raceway systems differ in their construction and, therefore, their components are not interchangeable with other raceways or fittings of other systems.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Communications Cable Outlet Box
Optical Fiber Outlet Box
Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Box
Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2269, "Outline of Investigation for Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Boxes."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The

CERTIFICATION Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Listing Mark on the product, or the UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Outlet Box," "Communications Cable Outlet Box" or "Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OUTLET BOX ACCESSORIES FOR
USE IN HAZARDOUS LOCATIONS
(QAZV)**

GENERAL

This category covers conduit box bodies, flat and domed covers, fixture hanger covers, threaded extensions, sealing hub covers, and similar subassemblies of outlet boxes, fixture fittings and conduit fittings. They are intended to be assembled at the factory or in the field by the user to form a complete explosion-proof or dust-ignition-proof enclosure. Information on restrictions in the use and assembly of these devices is marked on each part.

PRODUCT IDENTITY

The following product identity appears on the product:
Outlet Box Accessory for Use in Hazardous Locations
Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

See Outlet Boxes for Use in Hazardous Locations (QBCR), Conduit Fittings for Use in Hazardous Locations (EBNV) and Luminaire Fittings for Use in Hazardous Locations (IGIV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Outlet Box Accessory for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE ROUTING ASSEMBLIES (QBAA)

USE AND INSTALLATION

This category covers routing assemblies for installation of conductive and nonconductive optical fiber cable, communications cable/wire, power-limited fire-alarm cable, community antenna television cable and low-power network-powered broadband communications cable. Cable-routing assemblies are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). Cable-routing assemblies are only suitable for the installation of cable/wire noted in the following information. Individual routing assembly systems differ in their construction and, therefore, their components are not interchangeable with other routing assemblies or fittings of other systems. This category includes pliable lengths, rigid straight sections, elbows, bends, and fittings such as expansion joints, female and male adapters, and couplings.

These products may or may not incorporate end fixtures or covers.

Cable/Wire Type

Routing Assembly Marking/Use	Cable/Wire Type				Low-power Network-powered Broadband Communications
	Optical Fiber	Communications	Power-limited Fire Alarm	Community Antenna Television	
Plenum Riser	OFNP, OFNR, OFCP, OFCR	Refer to specific provisions within the NEC	FPLP, FPLR	CATVP, CATVR	BLP, BLR
None (general use)	OFNP, OFNR, OFN, OFNG, OFCP, OFCR, OFC, OFCC	CM, CMG, Cross-connect wire	FPLP, FPLR, FPL	CATVP, CATVR, CATV	BLP, BLR, BL

A routing assembly marked "Plenum" is suitable for use in fabricated ducts or other spaces used for environmental air (plenum) where used to support cable as identified in the table above. This "plenum" routing assembly exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft where tested in accordance with ANSI/UL 2024, "Signaling, Optical Fiber and Communications Raceways and Cable Routing Assemblies." A routing assembly marked "Plenum" is also suitable for installation in risers where used to support cable identified for riser use in the table above. A routing assembly marked "Plenum" is also suitable for general use where used to support any of the cable identified for general use in the table above.

A routing assembly marked "Riser" is suitable for installation in riser installations where used to support cable as identified in the table above. This "riser" routing assembly has fire-resistant characteristics capable of preventing the spread of fire from floor to floor. This "riser" routing assembly meets the test requirements of ANSI/UL 2024. A routing assembly marked "Riser" is also suitable for general use where used to support any of the cable identified for general use in the table above.

A routing assembly with neither the marking "Plenum" nor "Riser" is suitable for general use to support cable as identified in the table above. This "general use" routing assembly is resistant to the spread of fire where tested in accordance with the Vertical-Tray Flame Test (General Use) in ANSI/UL 2024.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Communications Cable Routing Assembly
 - General-use Cable Routing Assembly
 - Optical Fiber/Communications Cable Routing Assembly
 - Optical Fiber Routing Assembly
 - Plenum Cable Routing Assembly
 - Riser Cable Routing Assembly

RELATED PRODUCTS

Optical fiber and communications cable raceway intended to be installed in accordance with Sections 770.154(A) and 800.154(A) of the NEC is covered under Optical Fiber/Communications/Signaling/Coaxial Cable Raceway (QAZM).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2024, "Cable Routing Assemblies and Communications Raceways."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the complete Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "General-use Cable Routing Assembly," "Riser Cable Routing Assembly," "Plenum Cable Routing Assembly," "Optical Fiber Routing Assembly," "Communications Cable Routing Assembly" or "Optical Fiber/Communications Cable Routing Assembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET AND JUNCTION BOXES FOR USE IN HAZARDOUS LOCATIONS (QBCR)

GENERAL

This category covers Class I, Division 1, Class II and Class III outlet, conduit, junction, and pull boxes, including intrinsically safe constructions, that may consist of equipment or components including terminals, terminal strips, terminal blocks, jumpers, busbars and conduit fittings.

These boxes are for use in threaded rigid conduit or steel intermediate metal conduit wire raceways, or with other approved wiring methods for hazardous (classified) locations in accordance with ANSI/NFPA 70, "National Electrical Code." They may provide for splicing of conductors, but conductors are not intended to be sealed in conduit boxes. The boxes are marked or provided with instructions to indicate when accessories such as unions and sealing fittings are furnished with the box.

Boxes marked "rain tight" have been subjected to tests designed to simulate exposure to beating rain to determine that such exposure will not result in entrance of water. Boxes identified with an enclosure type designation are intended for use as indicated in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Cast-metal boxes suitable for field drilling and tapping of holes for conduit connections and mounting are marked to indicate the location and the trade sizes of the openings either on the box, as part of the instructions, or on the packaging carton.

Cast-aluminum alloy boxes are not considered acceptable for installation in concrete or cinder fill unless protected with asphalt-base paint or the equivalent, along with indication that the boxes are acceptable for installation in concrete or cinder fill either on the box, as part of the instructions, or on the packaging carton.

Where field installation of certain types of equipment or components is acceptable (which may include terminals, terminal strips, terminal blocks, jumpers, busbars and conduit fittings), the installation instructions provided with the product will specify the type, number and mounting arrangements for the equipment or components to be installed.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Conduit Box for Use in Hazardous Locations
 - Junction and Pull Box for Use in Hazardous Locations
 - Junction Box for Use in Hazardous Locations
 - Outlet Box for Use in Hazardous Locations
 - Pull Box for Use in Hazardous Locations

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

RELATED PRODUCTS

See Conduit Fittings for Use in Hazardous Locations (EBNV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category may include one of the following, depending upon the construction and application:

- ANSI/UL 50, "Enclosures for Electrical Equipment" (11th ed.)
- ANSI/UL 50, "Enclosures for Electrical Equipment, Non-Environmental Considerations" (12th ed.)
- ANSI/UL 50E, "Enclosures for Electrical Equipment, Environmental Considerations"

OUTLET AND JUNCTION BOXES FOR USE IN HAZARDOUS LOCATIONS (QBCR)

Part I of ANSI/UL 508, "Industrial Control Equipment"
ANSI/UL 1059, "Terminal Blocks"
ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings" Products that employ this standard are investigated to the 6th ed. (issued July 13, 2012; last revised June 4, 2014). All other products investigated to ANSI/UL 514B are identified by the specific standard/edition/date in the individual certifications.

ANSI/UL 486A-486B, "Wire Connectors"
ANSI/UL 486E, "Equipment Wiring Terminals for Use with Aluminum and/or Copper Conductors"

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product, or the Certification Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Outlet Box for Hazardous Locations," "Conduit Box for Use in Hazardous Locations," "Junction and Pull Box for Use in Hazardous Locations," "Junction Box for Use in Hazardous Locations," "Pull Box for Use in Hazardous Locations." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ACTIVE OPTICAL CABLE ASSEMBLIES (QBDV)

GENERAL

This category covers factory-assembled active optical cable (AOC) assemblies. AOC is a cabling technology that accepts the same electrical interfaces as a traditional copper cable, but uses optical fiber between the connectors. AOC uses electrical-to-optical transceivers on the cable ends to access the performance capabilities of optical fiber while retaining compatibility with standard electrical interfaces.

AOC assemblies consist of optical fiber or hybrid (optical fiber/copper) cable and electrically active connectors incorporating optical transceivers. This AOC utilizes Class 1 lasers with the light source wholly contained within the cable assembly. The electrical circuits are powered by a Class 2 power source or an information technology (computer) equipment limited-power circuit as defined in 725.121 of ANSI/NFPA 70, "National Electrical Code" (NEC). Hybrid cable may be used to carry electrical power to the far end of the cable and is suitably rated for the voltage and current involved.

USE AND INSTALLATION

This category covers AOC assemblies intended for installation between units of electronic equipment where the interconnecting cable is outside of the equipment enclosures. AOC assemblies are not a permanent wiring method except as described in the NEC articles below.

When constructed with a Listed cable identified by a marking on the surface of the jacket as a type permitted in Articles 645, 725 and 770 or Chapter 8 of the NEC, AOC assemblies may be installed in accordance with those articles.

Nonmetallic AOC connectors have not been investigated for use in environmental air spaces in accordance with 300.22(B) and (C) of the NEC, unless the assembly is specifically marked as suitable for the application.

AOCs investigated as computer interconnection cable assemblies are intended for use within a computer room as defined in Article 645 of the NEC. These cable assemblies may also be used in an office environment where the cable is visible after installation.

bly (for AOCs investigated as computer interconnection cable assemblies) [Technology*] Active Optical Cable

The words "Active Optical Cable" may be abbreviated "AOC."

* "Technology" refers to the copper technology of the interface, such as "HDMI," "Thunderbolt" or "Ethernet."

RELATED PRODUCTS

Active connectors such as those that incorporate active optical transceivers are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ2) or Audio/Video, Information and Communication Technology Equipment (AZOAZ).

Optical fiber cable (without connectors) for use within buildings in accordance with Article 770 of the NEC is covered under Optical Fiber Cable (QAYK).

Factory-assembled optical fiber cable assemblies and factory-/field-installed connector products intended for residential and/or commercial applications as part of an optical fiber wiring system without active optical transceivers are covered under Optical Fiber Cable Assemblies and Connectors (QBFA).

Cable assemblies with copper conductors or hybrid cable constructions without active optical transceivers intended for use in residential and/or commercial applications as connected premises wiring and intended for installation in accordance with Chapter 8 of the NEC are covered under Communication, Coaxial and Broadband Cable Assemblies (DUNH).

Communications interconnecting cable, patch cords, extension cords and the like without active optical transceivers and not intended for use in residential and/or commercial applications as connected premises in accordance with the NEC are covered under Communications-circuit Accessories (DUXR).

Computer interconnection cable assemblies, without active optical transceivers, intended for installation between units of electronic equipment where the cable is outside of the equipment enclosure and within the computer room as defined in Article 645 of the NEC are covered under Computer Interconnection Cable Assemblies (DVPJ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are: All assemblies: TIA-455-6-B (2003), "FOTP-6 – Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

Optical fiber cable identified as a type permitted for permanent installation in public or private premises by Article 770 of the NEC: ANSI/UL 1651, "Optical Fiber Cable."

Hybrid cable identified as a type permitted for permanent installation in public or private premises by Article 725, Article 770 or Chapter 8 of the NEC: ANSI/UL 444, "Communications Cables," or ANSI/UL 13, "Power-Limited Circuit Cables."

Optical fiber cable for use in patch cords and not intended for permanent installation in public or private premises as described in the NEC: ANSI/UL 2556, "Wire and Cable Test Methods" (VW-1 rating). Hybrid cable for use in patch cords and not intended for permanent installation in public or private premises as described in the NEC: ANSI/UL 758 "Appliance Wiring Material" (VW-1 rating).

Computer interconnection cable assemblies intended for installation within a computer room as defined in Article 645 of the NEC: ANSI/UL 444, ANSI/UL 13, ANSI/UL 1651 or ANSI/UL 758.

Nonmetallic connectors of AOC assemblies marked suitable for use in air-handling spaces are additionally investigated to UL 2043, "Fire Tests for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces," if nonmetallic materials have a mass exceeding 30 grams.

UL MARK

The Certification Mark of UL on the product or on the attached tag or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, on the attached tag or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Active Optical Cable" or "[Technology] Active Optical Cable," where "Technology" refers to the copper technology of the interface, such as "HDMI," "Thunderbolt" or "Ethernet."

The product name for AOCs investigated as computer interconnection cable assemblies is "Active Optical Cable – Computer Interconnection Cable Assembly."

The words "Active Optical Cable" may be abbreviated "AOC."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER BRANCHING DEVICES (QBEA)

GENERAL

This category covers optical fiber branching devices intended for residential and/or commercial applications as part of an optical fiber wiring system.

Optical fiber branching devices include optical flexible circuits, fan-out devices, wavelength division multiplexers (WDM and DWDM) and other similar passive devices.

PRODUCT IDENTITY

The following product identity appears on the product:
Optical Fiber Branching Device

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 746C, "Polymeric Materials – Use in Electrical Equipment Evaluations."

Branching devices employing optical fiber connectors have additionally been investigated to TIA-455-6-B, "FOTP-6 – Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

UL MARK

The Certification Mark of UL on the product or on the attached tag or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Optical fiber branching devices which are also certified to a performance specification under Optical Fiber Branching Devices Certified to National or International Specifications (QBEN) are additionally marked with the following information:

ALSO CERTIFIED [Specification name and/or number]
Alternate UL Mark

The Listing Mark of UL on the product, on the attached tag, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Branching Device."

For optical fiber branching devices which are also Verified to a performance specification under Optical Fiber Branching Devices Verified in Accordance with National or International Specifications (QBEN), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name and/or number]" or the UL Verification Mark along with [Specification name and/or number].

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER BRANCHING DEVICES VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (QBEN)

GENERAL

This category covers optical fiber branching devices whose signal transmission, environmental and/or mechanical performance characteristics have been investigated in accordance with one or more of the applicable U.S. national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications.

Optical fiber branching devices include optical flexible circuits, fan-out devices, wavelength division multiplexers (WDM and DWDM) and other

OPTICAL FIBER BRANCHING DEVICES VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (QBEN)

similar passive devices. These devices are intended for residential and/or commercial applications as part of an optical fiber wiring system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The performance specifications used to investigate products in this category are contained in Telcordia GR-2866-CORE (Issue 1 June 1995), "Generic Requirements for Optical Fiber Ribbon Fanouts." Other performance specifications applicable to optical fiber cable assemblies and connector products may also be used by UL in Verification investigations.

UL MARK

The Verification Mark of UL on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Optical Fiber Branching Device," the Specification name(s) and/or number(s), and the date of the Specification(s).

For optical fiber branching devices which are also Listed under Optical Fiber Branching Devices (QBEA), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name(s) and/or number(s)]," or the UL Verification Mark together with the Specification name(s) and/or number(s) and the date of the Specification(s).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE ASSEMBLIES AND CONNECTORS (QBFA)

GENERAL

This category covers factory-assembled optical fiber cable assemblies and factory/field-installed connector products intended for residential and/or commercial applications as part of an optical fiber wiring system.

Optical fiber cable assemblies consist of optical fiber cable and optical fiber cable connectors. When constructed with a certified cable identified by a marking on the surface of the jacket as a type permitted in Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC), optical fiber cable assemblies may be installed in accordance with that Article.

These assemblies have not been investigated for use in environmental air spaces in accordance with Sections 300.22(B) and (C) of the NEC unless specifically marked for the application.

Optical fiber cable connectors are intended for factory assembly or for field assembly by trained service personnel.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Optical Fiber Cable Assembly
Optical Fiber Connector

RELATED PRODUCTS

Optical fiber cable (without connectors) for use within buildings in accordance with Article 770 of the NEC is covered under Optical Fiber Cable (QAYK).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate optical fiber connectors is ANSI/UL 746C, "Polymeric Materials – Use in Electrical Equipment Evaluations."

The basic standards used to investigate optical fiber cable assemblies are ANSI/UL 1651, "Optical Fiber Cable" (where certified cable is employed) or ANSI/UL 2556, "Wire and Cable Test Methods" (for noncertified cable VW-1 rating) and, for connectors, ANSI/UL 746C and TIA-455-6-B, "FOTP-6 – Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

Cable assemblies marked suitable for use in air-handling spaces are additionally investigated to UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces," if nonmetallic materials weighing more than 30 grams are used.

UL MARK

The Certification Mark of UL on the product or on the attached tag or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

OPTICAL FIBER CABLE ASSEMBLIES AND CONNECTORS (QBFA)

For optical fiber cable assemblies and optical fiber connectors which are also certified to a performance specification under Optical Fiber Cable Assemblies and Connectors Certified to National or International Specifications (QBFN), the marking includes the appropriate Certification Mark and either the text "Also Certified [Specification name and/or number]," or the UL Certification Mark together with the Specification name and/or number.

Alternate UL Mark

The Listing Mark of UL on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Cable Assembly" or "Optical Fiber Connector."

For optical fiber cable assemblies and optical fiber connectors which are also Verified to a performance specification under Optical Fiber Cable Assemblies and Connectors Verified in Accordance with National or International Specifications (QBFN), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name and/or number]," or the UL Verification Mark together with the Specification name and/or number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE ASSEMBLIES AND CONNECTORS VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (QBFN)

GENERAL

This category covers optical fiber cable assemblies and connector products whose signal transmission, environmental and/or mechanical performance characteristics have been investigated to one or more of the applicable U.S. national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The performance specifications used to investigate products in this category are contained in Telcordia GR-326-CORE (Issue 3 September 1999), "Generic Requirements for Singlemode Optical Connectors and Jumper Assemblies." Other performance specifications, applicable to optical fiber cable assemblies and connector products, may also be used by UL in certification investigations.

UL MARK

The Verification Mark of UL on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Optical Cable Assembly" or "Optical Fiber Connector," the Specification name(s) and/or number(s), and the date of the Specification(s).

For optical fiber cable assemblies and optical fiber connectors which are also Listed under Optical Fiber Cable Assemblies and Connectors (QBFA), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name(s) and/or number(s)]," or the UL Verification Mark together with the Specification name(s) and/or number(s) and the date of the Specification(s).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BOXES AND FITTINGS (QBPZ)

OUTLET BOXES AND FITTINGS (QBPZ)

ILLUMINATED COVER PLATES FOR FLUSH-MOUNTED WIRING DEVICES (QBSA)

GENERAL

This category covers illuminated cover plates for flush-mounted wiring devices. The cover plates have integral nonreplaceable light sources, such as neon, light-emitting diode (LED) or electroluminescent panel, and are intended for installation in accordance with Article 314 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT IDENTITY

The following product identity appears on the product:
Illuminated Cover Plate for Flush-mounted Wiring Devices

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Illuminated Cover Plate for Flush-mounted Wiring Devices."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BOXES AND FITTINGS CERTIFIED FOR FIRE RESISTANCE (QBWY)

GENERAL

This category covers special-purpose boxes for installation in floors and nonmetallic outlet boxes for installation in walls and partitions and ceilings in accordance with the provisions of ANSI/NFPA 70, "National Electrical Code" (NEC). They have shown a degree of fire resistance when installed in the particular floor(s) or wall(s) described for each certified company. Boxes of the type certified in other categories have been investigated and found to comply with established electrical requirements and are so certified.

This category includes certifications for nonmetallic outlet and switch boxes for use in fire resistive rated wall or partition assemblies. The information provided for each certification includes the model numbers for the certified products, a description of the rated assemblies, the spacing limitations for the boxes and the installation details. Nonmetallic boxes should not be installed on opposite sides of walls or partitions of staggered stud construction unless certified for use in such constructions.

Where indicated in the individual certifications, products have also been investigated for heat and smoke release characteristics in accordance with UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces." Such products may be installed in air-handling spaces in accordance with Sec. 300.22(C) of the NEC. Authorities Having Jurisdiction should be consulted before installation.

FLOOR BOXES

Boxes for use with floors have been investigated for use with electrical receptacles fabricated of melamine, phenolic or urea materials, unless specified otherwise in the installation instructions and certification information. Floor boxes and fittings are intended to be installed in accordance with installation instructions provided with the product.

PRODUCT CATEGORIES BY CATEGORY CODE

Outlet Boxes and Fittings Certified for Fire Resistance (QBWY)—Continued

Boxes with integral connectors for electric metallic tubing or for unthreaded rigid metallic conduit are provided with a marking on the carton to indicate the specific type or types of wiring system for which the box has been tested.

Floor boxes designated for floor installation as covered in the NEC are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor-cleaning operations. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs, or both, and are provided with a marking on the carton to identify boxes of this type, such as "Floor Box" or "Floor Box, Concrete Tight," as appropriate.

WALL AND PARTITION AND CEILING BOXES

Nonmetallic outlet boxes investigated for installation in fire-resistive assemblies are provided with the appropriate Certification Mark for electrical products and other markings as described in Nonmetallic Outlet Boxes (QCMZ). Nonmetallic outlet boxes certified for use in fire-resistive designs may have the following marking in the base of the box:

Class * hr, F, W and/or C

where * indicates the hourly rating, such as 1 hr or 2 hr and F = Floor, W = Wall and C = Ceiling.

The boxes are certified for use in certain fire-resistive designs when installed in accordance with the details described for each certified company. Any certified metallic or nonmetallic cover is suitable for use with these nonmetallic boxes.

PRODUCT IDENTITY

The following product identity appears on the product:
Outlet Boxes and Fittings

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

Outlet boxes that comply with established electrical requirements are covered under Metallic Outlet Boxes (QCIT) and Nonmetallic Outlet Boxes (QCMZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 263, "Fire Tests of Building Construction and Materials," and Supplement SB ("Nonmetallic Boxes for Installation in Fire Resistance Rated Wall and Partition Assemblies") of ANSI/UL 514C, "Nonmetallic Outlet Boxes, Flush-Device Boxes, and Covers."

UL MARK

The Certification Mark of UL on the product or on each UL-certified steel floor and form unit with factory-installed floor boxes, or the UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO FIRE RESISTANCE DESIGN NO(S).

SEE UL ONLINE CERTIFICATIONS DIRECTORY

Where indicated in the individual certifications, products may be marked "Suitable for use in air-handling spaces in accordance with Sec. 300.22(C) of the National Electrical Code" when investigated to determine suitability for such use.

Alternate UL Mark UL MARK

The Classification Mark of UL on the product or on each UL Classified steel floor and form unit with factory-installed floor boxes, or the UL symbol on the product and the Classification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Outlet Boxes and Fittings Certified for Fire Resistance (QBWY)—Continued

OUTLET BOXES AND FITTINGS CLASSIFIED FOR FIRE RESISTANCE DESIGN NOS. _____

SEE PRODUCT CATEGORY IN UL FIRE RESISTANCE DIRECTORY Control No.

Where indicated in the individual Classifications, products may be marked "Suitable for use in air-handling spaces in accordance with Sec. 300.22(C) of the National Electrical Code" when investigated to determine suitability for such use.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METALLIC OUTLET BOXES (QCIT)

GENERAL

This category covers metallic mud rings, flush device boxes, conduit bodies, conduit boxes, floor boxes, outlet boxes, outlet box hoods, special-purpose boxes, extension rings, covers, and cover plates for flush-mounted wiring devices, intended for installation in accordance with Article 314 of ANSI/NFPA 70, "National Electrical Code" (NEC). These products are also intended for installation and use in accordance with the following information.

MUD RINGS

A mud ring positions a flush-mounted wiring device flush with the finished wall surface. Mud rings may be provided with either a fixed or adjustable depth sleeve.

EXTENSION RINGS

Extension rings are suitable for extending properly secured flush- or surface-mounted boxes. One or more extensions may be used. An extension ring is intended to increase the box depth, volume, or both.

USE IN FIRE-RATED ASSEMBLIES

Certified single- and double-gang metallic outlet and switch boxes with metallic or nonmetallic cover plates may be used in bearing and nonbearing wood stud and steel stud walls with ratings not exceeding 2 h. These walls have gypsum wallboard facings similar to those shown in Design Nos. U301, U411 and U425, as covered under Fire Resistance Ratings – ANSI/UL 263 (BXUV). The boxes are intended to be fastened to the studs with the openings in the wallboard facing cut so that the clearance between the boxes and the wallboard does not exceed 1/8 in. The boxes are intended to be installed so that the surface area of individual boxes does not exceed 16 sq in, and the aggregate surface area of the boxes does not exceed 100 sq in per 100 sq ft of wall surface.

Boxes located on opposite sides of walls or partitions are intended to be separated by a minimum horizontal distance of 24 in. This minimum separation distance between the boxes may be reduced when Wall-opening Protective Materials (QCSN) are installed according to the requirements of their certification.

The boxes are not intended to be installed on opposite sides of walls or partitions of staggered stud construction unless Wall-opening Protective Materials (QCSN) are installed with the boxes in accordance with certification requirements for the protective materials.

Certified metallic outlet and switch boxes with metallic or nonmetallic cover plates may be used in floor-ceiling and roof-ceiling assemblies with ratings not exceeding 2 h when these assemblies have gypsum wallboard membranes. The boxes are intended to be fastened to the joists with the openings in the wallboard facing cut so that the clearance between the boxes and the gypsum wallboard does not exceed 1/8 in. The boxes are intended to be installed so that the surface area of individual boxes does not exceed 16 sq in, and the aggregate surface area of the boxes does not exceed 100 sq in per 100 sq ft of ceiling surface.

CONDUIT BODIES

Conduit bodies that are provided with a volume marking can enclose splices, taps or devices. Conduit bodies that are not provided with a volume marking are covered under Conduit Fittings (DWTI). Conduit bodies certified for use with specific conduit body covers and conduit body covers certified for use with specific conduit bodies are covered under Conduit Bodies and Covers Certified for Use with Specified Equipment (QCKW).

CONCENTRIC OR ECCENTRIC KNOCKOUTS

All boxes with concentric or eccentric knockouts have been investigated for bonding and are suitable for bonding without any additional bonding means around concentric (or eccentric) knockouts where used in circuits above or below 250 V, and may be marked as such.

CLAMPS

Boxes may or may not be provided with clamps. When clamps are provided, the carton is marked to indicate the type of wiring system or combi-

OUTLET BOXES AND FITTINGS (QBPZ)

Metallic Outlet Boxes (QCIT)—Continued

nation of systems for which they have been tested. The clamps are marked with the following letters or combinations thereof to indicate that they are suitable for use with armored cable ("A"): flexible metal conduit — "E," nonmetallic-sheathed cable — "N," or flexible tubing (loom) — "T." Clamps suitable for Type MC metal-clad cable are marked "MCI" for metal-clad interlocking armored cable, "MCI-A" for metal-clad interlocking armor ground cable, "MCS" for metal-clad continuous smooth-sheath cable, and "MCC" for metal-clad continuous corrugated-sheath cable. If suitable for all seven types, the clamp is marked "ALL." Clamps suitable for nonmetallic-sheathed cable are also suitable for multiconductor underground feeder and branch circuit cable where used in dry locations.

Clamps have been tested for securing only one cable per clamp, except multiple section clamps are considered suitable for securing one cable under each section of the clamp, each cable entering a separate knockout.

GROUNDING

Clamps for armored cable, flexible metal conduit, metal-clad interlocking armor ground cable, metal-clad continuous smooth-sheath cable, or metal-clad continuous corrugated-sheath cable are considered suitable for grounding where installed in accordance with the NEC.

FIXTURE/LUMINAIRE SUPPORT

A box, with or without a bracket or bar hanger, intended for support of a fixture/luminaire weighing 50 lbs or less is marked "FOR FIXTURE/LUMINAIRE SUPPORT" on the carton to indicate that the box is intended for fixture/luminaire support. A box, with or without a bracket or bar hanger, intended for support of a fixture/luminaire weighing more than 50 lbs is marked with the weight of the fixture/luminaire to be supported. Metallic device boxes and device plaster rings have not been investigated for support of a ceiling fixture/luminaire unless marked for use in ceilings, walls, and with the weight of the product to be supported. Metallic device boxes or metallic device boxes intended to be installed in an existing structure have been investigated for the support of utilization equipment weighing not more than 6 lbs.

INTEGRAL CONNECTORS

Boxes with integral connectors for electrical metallic tubing or for unthreaded rigid metallic conduit are provided with a marking on the carton to indicate the specific type or types of wiring system for which the boxes have been tested.

CEILING-SUSPENDED-FAN SUPPORT

A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan weighing 35 lbs or less is marked "ACCEPTABLE FOR FAN SUPPORT" on the product. A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan weighing more than 35 lbs but not more than 70 lbs is marked "ACCEPTABLE FOR FAN SUPPORT OF 70 LBS OR LESS" on the product. A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan is acceptable for use with a fixture/luminaire when provided with the above fixture/luminaire-support markings.

CONCRETE TIGHT

All metal boxes, except aluminum alloy boxes, are provided with corrosion protection suitable for installation in concrete. Aluminum alloy boxes covered under this category are not considered acceptable for installation in concrete or cinder fill unless protected by asphalt paint or the equivalent. Boxes designated as "concrete tight" may have no means of support other than the concrete and often accommodate covers at top and bottom.

FLOOR BOXES

Floor boxes designed for floor installation as covered in the NEC are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor cleaning operations. Covers with gaskets may be shipped separately from the boxes. Both products are provided with installation instructions. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs or both, and are provided with a marking on the carton to identify boxes of this type such as "Floor Box Cover," "Floor Box" or "Floor Box, Concrete Tight," as appropriate. Floor boxes may be provided with wiring devices.

WET AND DAMP LOCATIONS

Boxes and covers intended for use in wet locations as defined by the NEC are marked "Wet Location." Damp location boxes and covers are intended to be so located or equipped as to prevent water from entering or accumulating in the box and are marked "Damp Location." Boxes with threaded conduit hubs will normally prevent water from entering except for condensation within the box or connected conduit.

Box and device cover combinations, and flush device covers that provide protection from the weather only when the cover is closed, are marked "Wet Location Only When Cover Closed" and may be marked "Damp Location." Outlet box hoods intended for use in damp or wet locations are marked for each location and may be marked "Extra-Duty."

ENVIRONMENTAL INSTALLATION

OUTLET BOXES AND FITTINGS (QBPZ)

403

Metallic Outlet Boxes (QCIT)—Continued

Boxes may be marked with the environmental Enclosure Type number (1, 2, 3, 3R, etc.) as described in Electrical Equipment for Use in Ordinary Locations (AALZ).

Boxes marked with Enclosure Type 3X or "Corrosion Protection" provide the same level of protection as Type 3 enclosures, and are provided with an additional level of corrosion protection for the enclosure.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Extension Ring
- Flush Device Box
- Outlet Box
- Outlet Box and Cover

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Outlet box assemblies that include certified outlet boxes and one or more of the following certified parts: wiring device, mud ring, cover plate, wet-location gasket and cover plate, wet-location gasket and outlet box hood, or other factory-assembled parts, are covered under Wiring Assemblies (QQYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 514A, "Metallic Outlet Boxes," and ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark**UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Outlet Box," "Outlet Box and Cover," "Extension Ring," "Flush Device Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Conduit Bodies and Covers Certified for Use with Specified Equipment (QCKW)**GENERAL**

This category covers certified conduit body covers certified for use with specified certified conduit bodies, and certified conduit bodies certified for use with specified certified conduit body covers, in accordance with the details described under UL MARK below.

These products have been investigated for use in wet locations.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Conduit Body
- Conduit Body Cover

RELATED PRODUCTS

Products certified under this category are also certified under Metallic Outlet Boxes (QCIT).

ADDITIONAL INFORMATION

For additional information, see Metallic Outlet Boxes (QCIT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514A, "Metallic Outlet Boxes."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

ALSO CERTIFIED FOR USE WITH UL-CERTIFIED CONDUIT BODY CATALOG NO. _____, [Listee's name]

or

ALSO CERTIFIED FOR USE WITH UL-CERTIFIED CONDUIT BODY COVER CATALOG NO. _____, [Listee's name]

Alternate UL Mark

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the complete Listing Mark for Metallic Outlet Boxes (QCIT) and the following additional information:

ALSO CLASSIFIED BY UNDERWRITERS LABORATORIES INC. FOR USE WITH UL LISTED [CONDUIT BODY] [CONDUIT BODY COVER]

CATALOG NO. _____, [LISTEE'S NAME]

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC OUTLET BOXES (QCMZ)**GENERAL**

This category covers nonmetallic flush device boxes, conduit bodies, conduit boxes, outlet boxes, outlet box and bar hanger assemblies, outlet box hoods, special-purpose boxes, extension rings, covers, and cover plates for flush-mounted wiring devices, intended for installation in accordance with Article 314 of ANSI/NFPA 70, "National Electrical Code." These products are also intended for installation and use in accordance with the following information.

BOX EXTENDERS

Box extenders are components installed in or on a box that is mounted in a finished structure intended to extend the electrical enclosure up to the new finished surface. The box extender rests on the edge of the existing box (fixed depth) or extends into the box (adjustable depth). The flange of the box extender, if provided, rests on the finished surface.

EXTENSION RINGS

Extension rings are suitable for extending properly secured flush- or surface-mounted boxes. One or more extensions may be used. An extension ring is intended to increase the box depth, volume, or both.

CONDUIT BODIES

Conduit bodies that are provided with a volume marking can enclose splices, taps or devices. Conduit bodies that are not provided with a volume marking are covered under Conduit Fittings (DWTI). Conduit bodies certified for use with specific conduit body covers and conduit body covers certified for use with specific conduit bodies are covered under Conduit Bodies and Covers Certified for Use with Specified Equipment (QCKW).

CLAMPS

Boxes may or may not be provided with clamps. When clamps are provided, the carton is marked to indicate the type of wiring system or combination of systems for which they have been tested. The clamps are marked with the following letters or combinations thereof to indicate that they are suitable for use with nonmetallic-sheathed cable "N" or flexible tubing (loom) "T." Clamps suitable for nonmetallic-sheathed cable are also suitable for multiconductor underground feeder and branch circuit cable where used in dry locations unless the box or smallest unit carton is marked "Nonmetallic Sheathed Cable Only." Clamps have been tested for securing only one cable per clamp, except multiple section clamps are considered suitable for securing one cable under each section of the clamp, each cable entering a separate knockout. All clamps are removed before the volume of the box is to be determined.

Boxes intended for use with nonmetallic-sheathed cable or open wiring are suitable for use with cable or wire rated 90°C or less, unless marked for a higher rated wire in degrees centigrade.

SINGLE-GANG BOX

A box nominally 2-1/4 by 4 in. or smaller is intended for one or more nonmetallic-sheathed cables to enter through a single- or multiple-stage knockout opening.

FOR USE WITH RIGID NONMETALLIC CONDUIT

OUTLET BOXES AND FITTINGS (QBPZ)**Nonmetallic Outlet Boxes (QCMZ)—Continued**

Nonmetallic boxes suitable for use with rigid nonmetallic conduit are provided with a marking on the carton to indicate the intended use, such as "For [Specific Type] Conduit." Such boxes, when so marked on the box or carton and provided with installation instructions, are intended for support by the specified conduit. Such boxes are inherently resistant to atmosphere containing common industrial corrosive agents and will withstand vapors or mists of caustic pickling acids, plating baths, and hydrofluoric and chromic acids. Nonmetallic boxes for use with rigid PVC conduit are suitable for use with wire rated 90°C or less.

Nonmetallic boxes suitable for use with rigid nonmetallic conduit are not intended to support equipment or to accommodate heat producing equipment.

FIXTURE/LUMINAIRE SUPPORT

A nonmetallic box, with or without a bracket or bar hanger, intended for support of a fixture/luminaire weighing 50 lbs or less is marked "FOR FIXTURE/LUMINAIRE SUPPORT" on the carton. A nonmetallic box, with or without a bracket or bar hanger, intended for support of a fixture/luminaire weighing more than 50 lbs. is marked with the weight of the fixture/luminaire to be supported. Nonmetallic boxes and device plaster rings have not been investigated for support of a ceiling fixture/luminaire unless marked for use in ceilings, walls, and with the weight of the product to be supported. Nonmetallic device boxes or nonmetallic device boxes intended to be installed in an existing structure have been investigated for the support of utilization equipment weighing not more than 6 lbs.

CEILING-SUSPENDED-FAN SUPPORT

A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan weighing 35 lbs or less is marked "ACCEPTABLE FOR FAN SUPPORT" on the product. A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan weighing more than 35 lbs. but not more than 70 lbs. is marked "ACCEPTABLE FOR FAN SUPPORT OF 70 lbs OR LESS" on the product. A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan is acceptable for use with a fixture/luminaire when provided with the above fixture/luminaire support markings.

CONCRETE TIGHT

Boxes designated as "concrete tight" may have no means of support other than the concrete and often accommodate covers at top and bottom.

FLOOR BOXES

Floor boxes designed for floor installation as covered in ANSI/NFPA 70, "National Electrical Code" (NEC), are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor-cleaning operations. Covers with gaskets may be shipped separately from the boxes. Both products are provided with installation instructions. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs, or both and are provided with a marking on the carton to identify boxes of this type such as, "Floor Box Cover" or "Floor Box, Concrete Tight" as appropriate. Floor boxes may be provided with wiring devices.

WET AND DAMP LOCATIONS

Boxes and covers intended for use in wet locations as defined by the NEC are marked "Wet Location." Damp location boxes and covers are intended to be so located or equipped as to prevent water from entering or accumulating in the box and are marked "Damp Location." Boxes with threaded conduit hubs will normally prevent water from entering except for condensation within the box or connected conduit.

Box and device cover combinations, and flush device covers that provide protection from the weather only when the cover is closed, are marked "Wet Location Only When Cover Closed" and may be marked "Damp Location." Outlet box hoods intended for use in damp or wet locations are marked for each location and may be marked "Extra-Duty."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Extension Ring
- Flush Device Box
- Outlet Box
- Outlet Box and Cover

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Outlet box assemblies that include certified outlet boxes and one or more of the following certified parts: wiring device, mud ring, cover plate, wet-location gasket and cover plate, wet-location gasket and outlet box hood, or other factory-assembled parts, are covered under Wiring Assemblies (QQYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Nonmetallic Outlet Boxes (QCMZ)—Continued

The basic standards used to investigate products in this category are ANSI/UL 514C, "Nonmetallic Outlet Boxes, Flush-Device Boxes, and Covers," and ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Outlet Box," "Outlet Box and Cover," "Extension Ring," "Flush Device Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BUSHINGS AND FITTINGS (QCRV)

GENERAL

This category covers supports for outlet and flush device boxes; bushings for use in metal studs; fittings for use in or on outlet and flush device boxes, such as knockout reducers, seals and insulating inserts, and cord-grip attachments; insulating gaskets used behind cover plates for flush-mounted wiring devices to stop drafts; pulling grips, strain-relief grips and support grips; locknuts for conduit; sealing gaskets (washers), sealing rings, service-entrance heads for rigid conduit or electrical metallic tubing; cable riser supports; and bushings for use on the ends of rigid or flexible conduit, or electrical metallic tubing, where a change to open wiring is made.

All male threaded fittings have only been investigated for use with locknuts.

Service-entrance heads or hoods are intended to be used on rigid conduit or electrical metallic tubing that is mounted with the conductor openings facing toward the ground. Service-entrance heads or hoods are suitable for outdoor use and in wet locations.

Armored Cable Bushings — These bushings are used on armored cable between the conductors and the outer armor. They are a readily distinguishable bright color such as red, orange or yellow.

Bushings — These bushings are suitable for temperatures of 150°C if they are black or brown in color, 90°C if they are any other color unless specifically marked for a higher temperature. Other bushings are covered under Insulating Bushings (NZMI) and Conduit Fittings (DWTI). Service-entrance heads for use with service-entrance cable are covered under Service-entrance Cable Fittings (TYZX). Temporary wiring, such as round flexible cables or cords may be secured by the use of a connector suitable for use with flexible cord.

Floor Outlet Fittings — Floor outlet fittings are for use in concrete floors for coupling short lengths of exposed conduit to concealed systems when so installed that floor couplings do not come below surface of floor in which they are embedded and subject to the following restrictions: Elbow to be used only where conduit wires pass through fitting without splice, joint, or tap within fitting, and only where no more than one elbow is used in any conduit run. Tees to be used only where conductors are not drawn in until after main conduit installation is complete. If splices, joints, or taps are used in tees, conductors are intended to be looped that upon removing exposed conduit at floor coupling, splices, joints, or taps can readily be disconnected without interfering with other wiring within fitting.

Sealing Gaskets (Washers) — Sealing gaskets are intended for use with threaded rigid metal conduit and intermediate metal conduit with one sealing gasket on the outside and an ordinary locknut or sealing locknut on the opposite side of the enclosure for wet locations or liquid-tight applications. Sealing gaskets may also be used with certified wet location or liquid-tight fittings where so marked on the fitting carton.

Sealing Rings — Sealing rings have a sealing material contained within a metal retaining ring. Sealing rings are intended for installation only between a threaded fitting and the outside of an enclosure with the fitting

Outlet Bushings and Fittings (QCRV)—Continued

secured by a locknut on the inside the enclosure. Sealing rings are intended for wet locations or liquid-tight applications where so marked on the product or product packaging.

Reusability — Bushings and fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

ENVIRONMENTAL ENCLOSURE TYPE RATINGS

Each fitting may be marked with one or more of the following Environmental Enclosure Type ratings for which it was investigated: Type 1, 2, 3, 3R, 3S, 4, 4X, 5, 6, 6P, 12, 12K, 13. The intended uses for each Environmental Enclosure Type are indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

GROUNDING

Metal reducing washers are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code," for raceways containing other than service conductors. Reducing washers are intended for use with metal enclosures having a minimum thickness of 0.053 in. Reducing washers may be installed in enclosures provided with concentric or eccentric knockouts, only after all of the concentric and eccentric rings have been removed. However, those enclosures containing concentric and eccentric knockouts that have been certified for bonding purposes may be used with reducing washers without all knockouts being removed.

CARTON MARKINGS

Fittings for use with flexible cords and marked "Liquid-Tight" on the carton indicates suitability for the use where directly exposed to oil spray or to rain.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Bar Hanger
- Offset Adapter
- Outlet Bushing
- Outlet Fitting

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 514A, "Metallic Outlet Boxes," ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings," ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices," and ANSI/UL 651, "Schedule 40 and 80 Rigid PVC Conduit and Fittings." Products that employ ANSI/UL 514B are investigated to the 6th ed. (issued July 13, 2012; last revised June 4, 2014). All other products investigated to ANSI/UL 514B are identified by the specific standard/edition/date in the individual certifications.

UL MARK

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Outlet Bushing," "Outlet Fitting," "Offset Adapter," "Bar Hanger," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WALL OPENING PROTECTIVE MATERIALS (QCSN)

USE AND INSTALLATION

This category covers proprietary compositions that are used to maintain the hourly ratings of fire-resistive walls and partitions containing flush-mounted devices, such as outlet boxes, electrical cabinets, and mechanical cabinets. The individual certifications indicate the specific applications and the method of installation for which the materials have been investigated.

PRODUCT CATEGORIES BY CATEGORY CODE

406 OUTLET BOXES AND FITTINGS (QBPZ)

Wall Opening Protective Materials (QCSN)—Continued

Electrical devices are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT IDENTITY

The following product identity appears on the product:
Wall-opening Protective Material

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 263, "Fire Tests of Building Construction and Materials."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO FIRE RESISTANCE

SEE UL ONLINE CERTIFICATIONS DIRECTORY

Alternate UL Mark

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

WALL OPENING PROTECTIVE MATERIAL

FIRE RESISTANCE CLASSIFICATION

SEE PRODUCT CATEGORY

IN UL FIRE RESISTANCE DIRECTORY

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET CIRCUIT TESTERS (QCYU)

GENERAL

This category covers portable devices with fixed attachment-plug blades, or probes attached to flexible leads, used to indicate various wiring conditions in 15 or 20 A branch circuits by a pattern of lights or other similar means along with markings or instructions to identify the probable wiring conditions which cannot be determined by the tester.

The devices may include provisions for checking the functions of a ground-fault circuit interrupter (GFCI) connected to the branch circuit, or for indicating that a branch circuit is connected to an arc-fault circuit interrupter (AFCI).

AFCI indicators operate by producing a waveform similar to an arc fault. Since these devices cannot produce an actual arc fault, an AFCI indicator may not trip every AFCI. AFCI indicators are provided with markings or instructions that state the following or equivalent: "CAUTION: AFCIs recognize characteristics unique to arcing, and AFCI indicators produce characteristics that mimic some forms of arcing. Therefore the indicator may provide a false indication that the AFCI is not functioning properly. If this occurs, recheck the operation of the AFCI using the test and reset buttons. The AFCI button test function will demonstrate proper operation."

These devices are not intended for use as comprehensive diagnostic instruments.

PRODUCT IDENTITY

The following product identity appears on the product:
Circuit Tester

RELATED PRODUCTS

Ground-continuity-indicating devices constructed integral with cord-connector bodies for use on construction sites are covered under Attachment Plugs, Fuseless (AXUT) as "cord-connector bodies."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1436, "Outlet Circuit Testers."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which

OUTLET CIRCUIT TESTERS (QCYU)

the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Tester."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PACKAGED PUMPING SYSTEMS (QCZJ)

GENERAL

This category covers fluid handling systems consisting of pumps, electric motors, frequency drives, control valves, gauges and piping mounted on a structural steel base. They are used for plumbing boosters, heat transfer, hot water heating, HVAC chilled and hot water packages, irrigation, boiler feed and condensate packages, and similar applications.

This category also covers fountain pumping systems intended for connection to permanently-installed architectural and floating fountains. They are intended for installation in accordance with Article 680 or 682 of ANSI/NFPA 70, "National Electrical Code" (NEC). If provided with a control panel, its nameplate includes "Industrial Control Panel for Floating Fountain," "Industrial Control Panel for Permanently Installed Fountain" or "Fountain Control Panel."

RATINGS

Packaged pumping systems are rated 600 V or less. The supply input is rated in full load amperes, voltage, number of phases, frequency, and the rating of the largest motor load.

The system and components of the system are intended to be used within the rated working pressure and with the appropriate liquids in accordance with system markings.

SPECIAL CONSIDERATIONS

These pumping systems have not been investigated for the handling of hazardous materials or for use in hazardous (classified) locations as defined in the NEC.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Packaged Fountain Pumping System

Packaged Pumping System

RELATED PRODUCTS

Systems covered under this category may also be covered under Drinking Water System Components (FDNP). The investigation of drinking water system components is conducted with respect to contaminants that can be introduced into the drinking water supply from their base metal alloy, plastic resin, or other nonmetallic parts such as gaskets, seals, coatings, adhesives, filter media, cement linings or the like.

Systems investigated together with air conditioning and refrigeration equipment are covered under Heating and Cooling Equipment (LZFE) or Specialty Refrigeration Equipment (SROT).

Pumping equipment intended for fire service is covered under Fire Pump Motors (QXZF).

Pumps intended for use with combustible or flammable liquids, corrosive liquids, or aqueous solutions containing corrosive materials are covered under Power-operated Pumps (RBOG), or Pumps, Power Operated, Flammable Liquid (RCRX).

Prepackaged combinations of components, such as pumps, filters, heaters, blowers, lights and controls, intended for use with field-supplied hot tubs or spas are covered under Hot Tub and Spa Equipment Assemblies (WBVQ).

Pumps investigated for use with or in proximity to swimming pools or spas are covered under Pumps (WCSX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," ANSI/UL 778, "Motor-Operated Water Pumps," and UL 508A, "Industrial Control Panels."

PACKAGED PUMPING SYSTEMS (QCZJ)

The basic standard used to investigate packaged pumping systems for heating and cooling equipment in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark covers only the equipment mounted to the common structural frame.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Packaged Pumping System" or "Packaged Fountain Pumping System."

The Listing Mark covers only the equipment mounted to the common structural frame.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINTING EQUIPMENT, AIR COMPRESSORS AND VACUUM PUMPS (QDFT)

This category covers painting equipment, air compressors and vacuum pumps intended for use on nominal system voltages of 600 V and less, except that where the appliances are driven by universal type motors or electromagnetic mechanisms the scope is limited to appliances rated for use on nominal system voltages of 250 V or less. These appliances are cord-connected or provided with means for field wiring connections.

This equipment is intended for household, commercial or industrial use as defined by ANSI/NFPA 70, "National Electrical Code" (NEC).

Paint sprayers present certain inherent hazards when flammable paint or liquid are sprayed, which cannot be guarded against by specific design features. The instructions and warnings supplied with and applicable to each piece of equipment should be carefully observed.

Appliances specified as double insulated are constructed with a special insulating system in lieu of grounding to comply with the provisions of the NEC. Such appliances are distinctively marked "Double-Insulated" or "Double Insulation."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMPRESSORS, VACUUM PUMPS AND PNEUMATIC PAINT SPRAYERS (QDGS)

USE AND INSTALLATION

This category covers air compressors and vacuum pumps, including pneumatic-type paint sprayers. Due to the customized nature of some industrial one-of-a-kind compressors, these requirements do not cover industrial compressors that are primarily supplied to an individual customer specification with regard to pressure, flow, electrical supply, or optional equipment. A Field Evaluation can be conducted on these types of industrial compressors.

Tank-type compressors of 3 hp or less or 30 gallons and less may employ tanks that are not certified by the American Society of Mechanical Engineers and are not marked with "U" or "UM," but have been investigated by UL for the application.

Products can be cord-connected or provided with means for permanent connection in the field. Permanently connected products are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

This category does not cover:

- medical and dental products; products intended to be used in heating, air conditioning, or refrigeration systems; paint heaters; electrostatic paint-spraying products; other products covered by separate requirements

PAINTING EQUIPMENT, AIR COMPRESSORS AND VACUUM PUMPS (QDFT)

Compressors, Vacuum Pumps and Pneumatic Paint Sprayers (QDGS)—Continued

- pneumatic tools and accessories that are covered by UL 7700-1, "Outline of Investigation for Portable Pneumatic Tools"
- industrial compressors that are primarily supplied to an individual customer specification with regard to pressure, flow, electrical supply, or optional equipment
- products:
 - rated more than 600 V
 - employing a universal motor rated more than 250 V
 - intended for installation and use in a hazardous (classified) location

REBUILT PRODUCTS

This category also covers compressors, vacuum pumps and pneumatic paint sprayers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt compressors, vacuum pumps and pneumatic paint sprayers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt compressors, vacuum pumps and pneumatic paint sprayers are subject to the same requirements as new compressors, vacuum pumps and pneumatic paint sprayers.

FACTORS NOT INVESTIGATED

This equipment has not been investigated for use as medical and dental equipment, or heating, air conditioning or refrigeration equipment.

PRODUCT IDENTITY

The following product identity appears on the product:

Painting Equipment

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

High-pressure paint sprayers, paint mixers and paint pigment dispensers are covered under Painting Equipment (QDIQ).

ADDITIONAL INFORMATION

For additional information, see Painting Equipment, Air Compressors and Vacuum Pumps (QDFT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1450, "Motor-Operated Air Compressors, Vacuum Pumps, and Painting Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Painting Equipment," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINTING EQUIPMENT (QDIQ)

USE

This category covers motor-operated equipment used for the preparation or application of paint, such as paint mixers, paint pigment dispensers, paint rollers and high-pressure airless paint sprayers.

Products can be cord-connected or provided with means for permanent connection in the field. Permanently connected products are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

REBUILT PRODUCTS

This category also covers painting equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt painting equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt painting equipment is subject to the same requirements as new painting equipment.

PRODUCT CATEGORIES BY CATEGORY CODE

PRODUCT IDENTITY

The following product identity appears on the product:

Painting Equipment

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Paint heaters are covered under Heaters, Industrial and Laboratory (KQLR).

Pneumatic paint sprayers are covered under Compressors, Vacuum Pumps and Pneumatic Paint Sprayers (QDGS).

ADDITIONAL INFORMATION

For additional information, see Painting Equipment, Air Compressors and Vacuum Pumps (QDFT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1450, "Motor-Operated Air Compressors, Vacuum Pumps, and Painting Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Painting Equipment" or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINT SPRAY AND FINISHING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (QEEA)

PAINT-SPRAY BOOTHS WITHOUT FIRE-PROTECTION SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (QEFA)

USE

This category covers paint-spray booths for liquid- and powder-coating finishing processes as defined in Article 516 of ANSI/NFPA 70, "National Electrical Code" (NEC), and in ANSI/NFPA 33, "Spray Application Using Flammable or Combustible Materials." Some of the booths may alternatively be used for drying, and may utilize electric heating or a gas-, gas-oil- or oil-fired heating system. The type of heating employed is indicated in the individual certifications.

These paint-spray booths are intended for field erection indoors in accordance with instructions furnished by the manufacturer and the information marked on the equipment. They are intended to be installed and used in accordance with applicable requirements in ANSI/NFPA 33 and Article 516 of the NEC. Paint-spray booths located within a commercial garage are intended to be installed as defined in Article 511 of the NEC.

FIRE PROTECTION

Paint-spray booths covered under this category are not provided with a factory-installed automatic fire-protection system. A UL-certified fire-protection system is intended to be provided by the installer and approved by the Authority Having Jurisdiction prior to operation of the booth.

COATING MATERIALS

These paint-spray booths are intended for spray operations using a single type of coating material. Due to the possibility of spontaneous ignition, different types of coating materials should not be alternately used unless all deposits of the first-used material are removed from the booth and ducts, and all paint-contaminated filters are replaced or cleaned prior to spraying with the second type of coating material.

Paint-spray Booths Without Fire-protection Systems for Use in Hazardous Locations (QEFA)—Continued

The toxicity of coating materials that may be used and the ability of the spray booth to provide protection for the painter and/or booth operator from coating material fumes have not been investigated. Proper precautions as recommended by the paint manufacturer should be followed.

PRODUCT MARKINGS

The main product nameplate for products in this category includes the statement: "A UL Listed Automatic Sprinkler System or other Listed Automatic Extinguishing System shall be provided by the installer and approved by the Authority Having Jurisdiction."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 33, "Spray Application Using Flammable or Combustible Materials."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

- (A) **PAINT-SPRAY BOOTH WITHOUT FIRE-PROTECTION SYSTEM FOR AUTOMOBILE REFINISHING**
- (B) **PAINT-SPRAY BOOTH WITHOUT FIRE-PROTECTION SYSTEM**
- (C) **PAINT-SPRAY BOOTH WITHOUT FIRE-PROTECTION SYSTEM FOR USE ONLY WITH [Company name] LABELED (GAS) (GAS-OIL) (OIL) BURNER MODEL(S) _____**
MAXIMUM INPUT _____ (BTU PER HOUR) (GALS PER HOUR)
REFER TO BURNER NAMEPLATE FOR CONTROL AND FUEL SPECIFICATIONS

A paint-spray booth that includes the burner as part of the factory-furnished assembly bears product information similar to (A) or (B).

A paint-spray booth assembly intended for installation of the burner in the field bears product information similar to (C). The burner bears separate product information.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names and information, as appropriate: (A) "Paint Spray Booth Without Fire Protection System for Automobile Refinishing," (B) "Paint Spray Booth Without Fire Protection System" or (C) "Paint Spray Booth Without Fire Protection System for Use Only with (Company Name) Labeled (Gas) (Gas-Oil) (Oil) Burner Model(s). Maximum Input (BTU Per Hour) (Gals Per Hour). Refer to Burner Nameplate for Control and Fuel Specifications."

A paint spray booth that includes a burner as part of the factory-furnished assembly bears a Listing Mark with the product name and information as outlined in (A) or (B).

A paint spray booth assembly intended for installation of the burner in the field bears a Listing Mark with the product name and information similar to the text in (C). The burner bears a separate Listing Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINT-SPRAY BOOTHS WITH FIRE-PROTECTION SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (QEFY)

USE

This category covers paint-spray booths for liquid- and powder-coating finishing processes as defined in Article 516 of ANSI/NFPA 70, "National Electrical Code" (NEC), and in ANSI/NFPA 33, "Spray Application Using Flammable and Combustible Materials." Some of the booths may alternatively be used for drying, and may utilize electric heating or a gas-, gas-oil-, or oil-fired heating system. The type of heating employed is indicated in the individual certifications.

PAINT-SPRAY BOOTHS WITH FIRE-PROTECTION SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (QEFY)

PANELBOARDS (QEUY)

PRODUCT CATEGORIES BY CATEGORY CODE

These paint-spray booths are intended for field erection indoors in accordance with instructions furnished by the manufacturer and the information marked on the equipment. They are intended to be installed and used in accordance with applicable requirements in ANSI/NFPA 33 and Article 516 of the NEC. Paint-spray booths located within a commercial garage are intended to be installed as defined in Article 511 of the NEC.

FIRE PROTECTION

Paint-spray booths are provided with (1) an integral engineered fire-extinguishing system that must be regularly inspected and/or recharged, or (2) automatic sprinklers that are connected to a separate water supply in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems."

COATING MATERIALS

These paint-spray booths are intended for spray operations using a single type of coating material. Due to the possibility of spontaneous ignition, different types of coating materials should not be alternately used unless all deposits of the first-used material are removed from the booth and ducts, and all paint-contaminated filters are replaced or cleaned prior to spraying with the second type of coating material.

The toxicity of coating materials that may be used and the ability of the spray booth to provide protection for the painter and/or booth operator from coating material fumes have not been investigated. Proper precautions as recommended by the paint manufacturer should be followed.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 33, "Spray Application Using Flammable and Combustible Materials."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

- (A) **PAINT-SPRAY BOOTH FOR AUTOMOBILE REFINISHING**
- (B) **PAINT-SPRAY BOOTH**
- (C) **PAINT-SPRAY BOOTH FOR USE ONLY WITH [Company name] LABELED (GAS) (GAS-OIL) (OIL) BURNER MODEL(S) _____**
MAXIMUM INPUT _____ (BTU PER HOUR) (GALS PER HOUR)
REFER TO BURNER NAMEPLATE FOR CONTROL AND FUEL SPECIFICATIONS

A paint-spray booth that includes the burner as part of the factory-furnished assembly bears product information similar to (A) or (B).

A paint-spray booth assembly intended for installation of the burner in the field bears product information similar to (C). The burner bears separate product information.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names and information, as appropriate: (A) "Paint Spray Booth for Automobile Refinishing," (B) "Paint Spray Booth" or (C) "Paint Spray Booth for Use Only with (Company Name) Labeled (Gas) (Gas-Oil) (Oil) Burner Model(s). Maximum Input (BTU Per Hour) (Gals Per Hour). Refer to Burner Nameplate for Control and Fuel Specifications."

A paint spray booth that includes the burner as part of the factory-furnished assembly bears a Listing Mark with the product name and information as outlined in (A) or (B).

A paint spray booth assembly intended for installation of the burner in the field bears a Listing Mark with the product name and information similar to the text in (C). The burner bears a separate Listing Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS (QEUY)

USE, INSTALLATION AND MARKINGS

This category covers lighting and power panelboards rated 600 V or less.

Panelboards are intended for mounting in cabinets, cutout boxes or enclosures designed for the purpose. The enclosure may be provided with the panel or provided separately. Only panelboards marked to indicate that they are for use in specific enclosures (identified by either catalog number or specific dimensional information) and panelboards labeled as "Enclosed Panelboards" have been investigated to determine that wiring space is adequate, or have been investigated for short-circuit-current ratings greater than 10,000 A rms symmetrical.

Enclosed panelboards identified with an Enclosure Type designation are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Some enclosed panelboards have one or more openings for plug-in watt-hour or similar meters. Such panelboards, when marked for outdoor use have, except for the joint between the plug-in meter and opening, been investigated for rain tightness.

Some panelboards are suitable for use as service equipment and may be so marked. Such marking is part of the Certification Mark as noted below or is an integral part of other required markings. Panelboards marked to indicate that they are suitable for use as service equipment and which can be removed from the enclosure are marked to identify the specific enclosure in which they are intended to be installed. If the acceptability of such a panelboard for use as service equipment depends upon the condition of installation or use, the panelboard is marked to indicate those conditions.

Some panelboards incorporate neutrals factory bonded to the frame or enclosure. Such units are marked "Suitable Only for Use as Service Equipment."

Panelboards marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system.

Panelboards are marked with their short-circuit-current rating in rms symmetrical amps. The marking states that short-circuit ratings are limited to the lowest interrupting rating of (1) any device installed or intended to be installed therein, and/or (2) any combination series-connected device. However, for combination series-connected devices, the short-circuit-current rating marked on the panelboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the panelboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the panelboard in accordance with the marked instructions.

Panelboards to which units (circuit breakers, switches, etc.) may be added in the field are marked with the name or trademark of the manufacturer and the catalog number or equivalent of those units that are intended to be installed in the field. Molded-case circuit breakers (see DIXF) may also be Classified and marked as being suitable for use in certain panelboards in place of or along with specific units marked on the panelboard.

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fused switches, other than fused power circuit devices, should not be loaded to exceed 80% of their current rating unless the device is otherwise marked. Low-voltage ac power switching devices (see PAPU) and fused power circuit devices (see YSR) used in panelboards are suitable for continuous use at 100% of their rating.

Some panelboards may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking, such as on a wiring diagram.

These panelboards are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location. If all terminals are suitable for use with aluminum conductors as well as copper conductors, the panelboard is marked "Use Copper or Aluminum Wire." A panelboard employing terminals or main or branch circuits units, individually marked "CU-AL," is marked as noted above or "Use Copper Wire Only." The latter statement indicates that wiring space or other factors make the panelboard unsuitable for aluminum conductors.

Unless the panelboard is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.15(B)(16) of ANSI/NFPA 70, "National Electrical Code" (NEC). However, 3-wire, single-phase service entrance or feeder conductors for dwelling units may be as covered in Section 310.15(B)(7) of the NEC. Termination provisions are determined based on values provided in Table 310.15(B)(16) or Section 310.15(B)(7), with no adjustment made for correction factors.

Some panelboards, constructed with interlocked main switching and overcurrent protective devices, have been investigated for use in optional standby systems in accordance with Article 702 of the NEC and are marked "Suitable for use in accordance with Article 702 of the National Electrical Code ANSI/NFPA 70," or, if provided within kit form, "Suitable for use in accordance with Article 702 of the National Electrical Code ANSI/NFPA 70 when provided with interlock kit Cat No. _____"

Some panelboards may be intended for interconnection with one or more electric power production sources operating in parallel with a pri-

mary source of electricity, in accordance with Article 705 of the NEC. These panelboards may be marked, "Suitable for use with interconnected parallel electric power production sources," "Suitable for use in accordance with Article 705 of the National Electrical Code, NFPA 70," or the equivalent.

CLASS CTL PANELBOARDS

Circuit-limiting panelboards (known as "Class CTL" panelboards) are identified by the words "Class CTL" on the UL Certification Mark.

Class CTL panelboards incorporate physical features which, in conjunction with the physical size, configuration, or other means provided in Class CTL circuit breakers, fuseholders or fusible switches, are designed to prevent the installation of more overcurrent protective poles than that number for which the device is designed and rated.

MARINE PANELBOARDS

Some certified enclosed panelboards in this category have been investigated for use aboard marine vessels over 65 ft in length in accordance with the Electrical Engineering Regulations of the United States Coast Guard Subchapter J CG-259 (46CFR Parts 110-113). Such enclosed panelboards are identified by a Certification Mark for marine vessels over 65 ft in length.

The Electrical Engineering Regulations of the United States Coast Guard classify marine enclosed panelboards as "Non-watertight," "Drip-proof" or "Watertight."

A "Drip-proof" marine enclosed panelboard is so constructed that falling moisture or dirt does not interfere with the successful operation of the equipment.

A "Watertight" marine enclosed panelboard is so constructed that water does not enter the enclosure when subjected to a stream of water.

External means are provided for the operation of switches or circuit breakers in "Watertight" marine enclosed panelboards.

Marine enclosed panelboards classed "Drip-proof" or "Watertight" are marked to indicate this fact.

A marine enclosed panelboard for use in corrosive locations is marked "Suitable for Use in Corrosive Locations."

RECREATIONAL VEHICLE (RV) PANELBOARDS

Some certified enclosed panelboards in this category have been investigated for RV use only. These panelboards generally consist of a line voltage/branch circuit section that complies with ANSI/UL 67, "Panelboards." The low-voltage compartment, including the overall enclosure for that compartment, complies with ANSI/UL 458, "Power Converters/Inverters and Power Converter/Inverter Systems for Land Vehicles and Marine Crafts," and is intended to be installed in accordance with Article 551 of the NEC. Such enclosed panelboards are identified by a Certification Mark for RVs. RV panelboards do not have integral converter or inverter functions. Devices having combination panelboard-inverter/converter capability are covered under Power Converters/Inverters and Power Converter/Inverter Systems (QPPY).

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Panelboard
- Enclosed Panelboard
- Marine, Enclosed Panelboard for Use on Vessels Over 65 Feet
- Enclosed RV Panelboard

The product identity may include the wording "Class CTL" or "Suitable for Use as Service Equipment," where appropriate.

The product identity "Enclosed Panelboard" covers both the panel and the enclosure with which it is provided.

RELATED PRODUCTS

Large single panels, frames, or assemblies of panels on which are mounted on the face, back, or both, switches, overcurrent and other protective devices, buses, and usually instruments; accessible from the rear as well as from the front and not intended to be installed in cabinets are covered under Switchboards, Dead-front (WEVZ).

Distribution equipment, the sole function of which is the automatic or nonautomatic transferring of one or more load conductor connections from one power source to another, is covered under Transfer Switches (WPTZ).

Factory-wired assemblies of industrial control equipment intended to control industrial processes are covered under Industrial Control Panels (NITW).

Distribution equipment containing only one circuit subdivision, unless also provided with a meter socket, is covered under Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ).

Distribution equipment intended to serve as a means for distributing power required to operate mobile or temporarily installed equipment is covered under Power Outlets and Power Outlet Fittings (QPYV).

Factory-wired assemblies of controllers, timers, temperature-regulating equipment and the like, intended for control of equipment for use with swimming pools, hot tubs and/or spas are covered under Controls (WAWU).

Factory-wired assemblies intended for the control of architectural and floating fountains are covered under Architectural and Floating Fountains (AWEG).

Portable power distribution equipment is covered under Power Distribution Equipment, Portable (QPRW).

Devices having combination panelboard/inverter capability are covered under Power Converters/Inverters and Power Converter/Inverter Systems (QPPY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 67, "Panelboards."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Panelboard," "Enclosed Panelboard," "Marine, Enclosed Panelboard for Use on Vessels Over 65 Feet," "Enclosed RV Panelboard." The product name may include the wording "Class CTL" or "Suitable for Use as Service Equipment," where appropriate. The product name "Enclosed Panelboard" covers both the panel and the enclosure with which it is provided.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS FOR USE IN HAZARDOUS LOCATIONS (QFIW)

USE

This category covers enclosed panelboards under Class I and Class II groups of the manually operable, air-break type, employing circuit breakers having automatic overload protection.

These enclosed panelboards are intended for lighting and low-capacity power distribution.

These panelboards are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Each marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

PRODUCT IDENTITY

The following product identity appears on the product:
Enclosed Panelboard for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Panelboard for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS, LIGHT AND POWER FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (QFKR)

USE

This category covers enclosed panelboards of the manually operable, air-break type, employing circuit breakers having automatic overload protection, and intended for lighting and low-capacity power distribution.

These panelboards are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Each marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Enclosed Panelboard for Hazardous Locations

Enclosed Panelboard for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Panelboard for Hazardous Locations" or "Enclosed Panelboard for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS, MODULAR (QFOF)

GENERAL

This category covers modular panelboards rated 600 V or less. A modular panelboard includes the following types of modules: an enclosed panelboard or a column type panelboard and one or more accessory modules, such as termination boxes, enclosed switches, circuit breaker enclosures, and the like. Each module has one or more openings in one or more sides of the enclosure for busbar connections or terminals for field wiring connections to other related modules. The modules are specifically designed for use with each other and, typically, they can be assembled in any sequence to meet various applications.

Each module of the system is marked for use with the other system modules, or each module is marked with a series designation common to all modules of a particular modular panelboard system.

Panelboard modules used in these modular panelboard systems are labeled "Panelboard Module" and all other system modules are labeled "Panelboard Accessory Module."

PRODUCT IDENTITY

One of the following product identities appears on the product:

Panelboard Accessory Module

Panelboard Module

RELATED PRODUCTS

See Panelboards (QEUY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 67, "Panelboards." In addition, each accessory module is investigated to its applicable UL Standard.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Panelboard Module" or "Panelboard Accessory Module."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PASSENGER BOARDING BRIDGES (QGLA)

USE AND INSTALLATION

This category covers passenger boarding bridges intended to be installed at airport terminals or marinas or ship ports for the purpose of loading or unloading passengers on or off aircraft or boats and similar watercraft. This equipment is intended to be operated only by trained personnel. Except for the passenger tunnel and cab when stationary, access to the bridge and the area in which the bridge operates is restricted.

Passenger boarding bridges are assemblies of two or more component sections. These sections may include, but are not limited to, a rotunda, rotunda support, tunnel, rotating cab and driver or prime mover. The rotunda provides for the connection of the bridge to the airport terminal building or marina or ship port. The cab provides for the connection of the bridge to the aircraft or watercraft. The tunnel may consist of one or more sections having a telescoping construction to facilitate outward movement of the bridge to meet the aircraft or watercraft. The driver or prime mover consists of one or more motors and drive train, which provide for proper positioning of the bridge to accommodate different types of aircraft and aircraft parking configurations and watercraft and watercraft parking configurations. Bridges are provided with one or more services for connection to utility power. Power is supplied throughout the bridge by S- or SJ-type cable suitable for outdoor use and wire protected by rigid conduit with appropriate fittings or appropriate raceway. Electrical equipment within the bridge may include industrial control panels, disconnect switches, limit switches, proximity switches, luminaires, light switches, GFCI receptacles, alarms and smoke detectors. Bridges may be provided with optional equipment such as an air conditioner and power supply for the aircraft or watercraft when the aircraft or watercraft is parked. This equipment is normally attached to the underside of the bridge.

Bridges are completely assembled at the factory for inspection and functionality testing prior to shipping. Bridges are disassembled, shipped in sections, reassembled at the installation site and retested for functionality. As part of disassembly the air handler, aircraft power unit, and rotunda support may be removed. Bridges are provided with various control, monitoring, signaling and alarm devices to prevent movement of the bridge that would result in damage to the bridge, aircraft or airport structures or watercraft or marina or ship port structures and alert personnel in the vicinity of the bridge that bridge movement is imminent.

This category also covers accessories for passenger boarding bridges intended to be installed at gate areas of airport terminals or marinas or ship ports. These accessories may be installed on or remote from the passenger boarding bridge. In either case they are associated with the operation of the passenger boarding bridge. The accessories include, but are not limited to, management systems for air-handling hoses, air-handling units, aircraft power units, and control, monitoring, signaling and alarm devices to regulate movement of the bridge.

This equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

PRODUCT IDENTITY

One of the following product identities appears on the product:

Passenger Boarding Bridge

Passenger Boarding Bridge Accessory

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Mechanical Equipment and Associated Products (AAME).

REQUIREMENTS

The basic standards used to investigate passenger boarding bridges in this category are UL 508A, "Industrial Control Panels," and ANSI/UL 325, "Door, Drapery, Gate, Louver, and Window Operators and Systems."

The basic standard used to investigate passenger boarding bridge accessories in this category is UL 508A, in addition to the requirements contained in UL Subject 2011, "Outline of Investigation for Factory Automation Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Passenger Boarding Bridge" or "Passenger Boarding Bridge Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL GROOMING APPLIANCES (QGRQ)

This category covers cosmetic and grooming appliances and related equipment for use in beauty salons, barber shops, and residences. Appliances include barber chairs, curling irons, hair conditioning machines, hair dryers, manicure sets, permanent wave machines, shampoo machines, styling dryers, and untanglers (detanglers). These units are identified as to household or commercial use in the individual listings. Also see "Hair Clipping and Shaving Appliances." Heated caps, facial masks and mitts are covered under the requirements for "Heating Pads."

The physiological effects of the medicaments or cosmetic materials which may be employed in association with these appliances have not been investigated.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL GROOMING APPLIANCES, COMMERCIAL (QGRT)

GENERAL

This category covers cosmetic and grooming appliances intended for commercial use in beauty salons, barber shops, nail care centers, and cosmetic studios. Appliances include hair dryers, barber chairs, wig and brush dryers, facial therapy units, hair spray systems, permanent wave machines, manicure sets, curling irons, cosmetology equipment, and hair conditioning machines.

FACTORS NOT INVESTIGATED

The physiological effects of the medicaments or cosmetic materials which may be employed in association with these appliances have not been investigated.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Commercial Fingernail-polish-drying Lamp
 - Commercial Gel-curing UV Lamp
 - Commercial Hair Dryer
 - Commercial Hair-washing System
 - Commercial Nail Tech Tool
 - Commercial Wax Depilator

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

- Hair clipping and shaving appliances are covered under Hair Clipping and Shaving Appliances (KEFX).
- Heated caps, facial masks and mitts are covered under Heating Pads, Electric (MNUV).
- Personal grooming appliances for household use are covered under Personal Grooming Appliances, Household (QGRW).
- Hydromassage chairs and pedicure spas are covered under Plumbing Accessories (QMTX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Personal Grooming Appliances, Commercial (QGRT)—Continued

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1727, "Commercial Electric Personal Grooming Appliances."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL SUN AND HEAT EQUIPMENT (QGRX)

GENERAL

This category covers personal sun and heat equipment of the household and commercial variety, including tanning beds and booths for use in commercial tanning salons, intended for the production of ultraviolet (sun) radiation, infrared (heat) radiation, or both.

This category also covers sun equipment provided with UV-A and UV-B fluorescent and/or high-intensity discharge (HID) lamps.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, that may be produced by these lamps have not been investigated.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Heat Unit
 - Sun Bed
 - Tanning Booth

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

- Sun and heat equipment intended for therapeutic use is covered under Medical Equipment (PIDF).
- Sun and heat equipment of the household variety intended for portable use is covered under Sun and Heat Lamps (QPDY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 482, "Portable Sun/Heat Lamps." The limit for ultraviolet irradiation specified in ANSI/UL 482 is in agreement with the federal regulations specified in 21CFR1040.20, "Sun Lamp Products and Ultraviolet Lamps Intended for Use in Sun Lamp Products."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sun Bed," "Tanning Booth" or "Heat Unit," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL HYGIENE AND HEALTH CARE APPLIANCES (QGRZ)

USE

This category covers appliances, primarily cord connected, intended for use in households or similar locations, not necessarily under professional supervision, such as toothbrushes, oral irrigation appliances, denture cleaners, hydromassage units, facial cleaners, etc.

This category also covers toilet seat assemblies (including bidet seats) containing electrical features, such as heating and water-dispensing components, which are intended to connect to the already-provided plumbing accessories (toilet bowl).

FACTORS NOT INVESTIGATED

The physiological effects of the use of these appliances, beneficial or otherwise, has not been investigated.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Health Care Appliance
- Personal Hygiene Appliance

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Medical and dental equipment intended for professional use is covered under Medical Equipment (PIDF).

Other household-related equipment is covered under Personal Grooming Appliances (QGRQ), Heating Pads, Electric (MNUV), Massage and Exercise Machines (PGXX) and Personal Sun and Heat Equipment (QGRX).

Toilets are covered under Plumbing Accessories (QMTX).

Facial saunas are covered under Personal Grooming Appliances, Household (QGRW) and Personal Grooming Appliances, Commercial (QGR1).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1431, "Personal Hygiene and Health Care Appliances," UL 1097, "Double Insulation Systems for Use in Electrical Equipment," and ANSI/UL 746C, "Polymeric Materials - Use in Electrical Equipment Evaluations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Personal Hygiene Appliance" or "Health Care Appliance," or the name of the specific product as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL PROTECTIVE EQUIPMENT (QGSY)

INDUSTRIAL WORKERS' PROTECTIVE APPAREL (QGVW)

Protective Clothing for Electrical Workers (QGVZ)

USE

This category covers protective clothing intended to provide minimal protection to electrical workers exposed to momentary electric arc and related thermal hazards. This wearing apparel includes design characteristics that relate to its utility and that relate specifically to protection from exposure to momentary electric arc.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products (AAME).

Protective Clothing for Electrical Workers (QGVZ)—Continued

REQUIREMENTS

The basic standard used to investigate products in this category is ASTM F1506, "Standard Performance Specification for Textile Materials for Wearing Apparel for Use by Electrical Workers Exposed to Momentary Arc and Related Thermal Hazards."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

PROTECTIVE COAT

AMERICAN SOCIETY FOR TESTING AND MATERIALS
STANDARD PERFORMANCE SPECIFICATION FOR
TEXTILE MATERIALS FOR WEARING APPAREL FOR
USE BY ELECTRICAL WORKERS EXPOSED TO
MOMENTARY ARC AND RELATED THERMAL HAZARDS
ASTM F1506, [latest revision date]

or

PROTECTIVE COAT

ASTM F1506, [latest revision date]

or

PROTECTIVE COVERALLS

AMERICAN SOCIETY FOR TESTING AND MATERIALS
STANDARD PERFORMANCE SPECIFICATION FOR
TEXTILE MATERIALS FOR WEARING APPAREL FOR
USE BY ELECTRICAL WORKERS EXPOSED TO
MOMENTARY ARC AND RELATED THERMAL HAZARDS
ASTM F1506, [latest revision date]

or

PROTECTIVE COVERALLS

ASTM F1506, [latest revision date]

or

PROTECTIVE GARMENT

AMERICAN SOCIETY FOR TESTING AND MATERIALS
STANDARD PERFORMANCE SPECIFICATION FOR
TEXTILE MATERIALS FOR WEARING APPAREL FOR
USE BY ELECTRICAL WORKERS EXPOSED TO
MOMENTARY ARC AND RELATED THERMAL HAZARDS
ASTM F1506, [latest revision date]

or

PROTECTIVE GARMENT

ASTM F1506, [latest revision date]

or

PROTECTIVE HOOD

AMERICAN SOCIETY FOR TESTING AND MATERIALS
STANDARD PERFORMANCE SPECIFICATION FOR
TEXTILE MATERIALS FOR WEARING APPAREL FOR
USE BY ELECTRICAL WORKERS EXPOSED TO
MOMENTARY ARC AND RELATED THERMAL HAZARDS
ASTM F1506, [latest revision date]

or

PROTECTIVE HOOD

ASTM F1506, [latest revision date]

or

PROTECTIVE JACKET

AMERICAN SOCIETY FOR TESTING AND MATERIALS
STANDARD PERFORMANCE SPECIFICATION FOR
TEXTILE MATERIALS FOR WEARING APPAREL FOR
USE BY ELECTRICAL WORKERS EXPOSED TO
MOMENTARY ARC AND RELATED THERMAL HAZARDS
ASTM F1506, [latest revision date]

or

PROTECTIVE JACKET

ASTM F1506, [latest revision date]

or

PROTECTIVE OVERALLS

AMERICAN SOCIETY FOR TESTING AND MATERIALS
STANDARD PERFORMANCE SPECIFICATION FOR
TEXTILE MATERIALS FOR WEARING APPAREL FOR
USE BY ELECTRICAL WORKERS EXPOSED TO
MOMENTARY ARC AND RELATED THERMAL HAZARDS
ASTM F1506, [latest revision date]

USE BY ELECTRICAL WORKERS EXPOSED TO
MOMENTARY ARC AND RELATED THERMAL HAZARDS
ASTM F1506, [latest revision date]

or
PROTECTIVE SHIRT
ASTM F1506, [latest revision date]
Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following information:

PROTECTIVE *
IN ACCORDANCE WITH THE
AMERICAN SOCIETY FOR TESTING AND MATERIALS
STANDARD PERFORMANCE SPECIFICATION FOR
TEXTILE MATERIALS FOR WEARING APPAREL FOR
USE BY ELECTRICAL WORKERS EXPOSED TO
MOMENTARY ARC AND RELATED THERMAL HAZARDS
ASTM F1506, [latest revision date]

Control No.

The Classification Mark may be abbreviated as follows:

PROTECTIVE *
IN ACCORDANCE WITH
ASTM F1506, [latest revision date]
Control No.

* GARMENT, COAT, JACKET, OVERALLS, COVERALLS, SHIRT, PANTS or HOOD

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT (QHWJ)

AC MODULES (QHYZ)

USE AND INSTALLATION

This category covers AC modules that provide single-phase power at 50/60 Hz when exposed to sunlight. An AC module consists of a photovoltaic module and an integral static inverter that changes dc power to ac power. AC modules may be connected in parallel and are intended for operation interactive with an electric utility supply. They have been investigated to deenergize their output upon loss of utility power.

These modules are rated up to 600 V dc input; 10 kW, 120/240 V ac or less, single-phase output.

These modules and panels are intended for mounting on buildings or on ground supported frames. Roof-mounted modules and panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof, the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building's roof system may adversely affect the roof-covering materials' resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

AC Modules (QHYZ)—Continued

AC modules are marked with the maximum size of dedicated branch circuit on which they may be installed and the maximum number of modules which may be connected in parallel.

Installation of the modules, including connection between the modules and the branch-circuit disconnecting means, is intended to be in accordance with the provisions of ANSI/NFPA 70, "National Electrical Code" (NEC), including Article 690. Authorities Having Jurisdiction should be consulted as to the conformance with applicable building codes including the class of roof covering.

AC modules provided with integral ground-fault detection and interruption means required by Sec. 690-5 of the NEC are identified by a marking on the product.

FLAME CLASSES

When applicable, modules and panels are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see UL's Roofing Materials and Systems Directory.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Utility Interactive AC Module
- Utility Interactive Inverter Module

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources," and ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Utility Interactive AC Module" or "Utility Interactive Inverter Module."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BUILDING-INTEGRATED PHOTOVOLTAIC MODULES AND PANELS (QHZZ)

USE AND INSTALLATION

This category covers flat-plate building-integrated photovoltaic (BIPV) modules and panels intended for mounting integrally to the structural or protective surfaces of a building. BIPV modules and panels are investigated for one of three primary installation methods: (1) intended to serve as the roof, or as a majority component of the roofing system of a building, (2) intended to serve as part of a structural component of a building, such as a curtain wall, facade, atrium, skylight, etc., or (3) intended to serve as part of a nonstructural component of a building, such as a curtain wall, facade, atrium, skylight, etc., which is applied extant to the primary building structure.

When intended to serve as the roof, or as a majority component of the roofing system of a building, the BIPV module serves as a primary component of the building's fire resistance and waterproofing membrane. These functions have been investigated as appropriate to the extent of those functions served. Standards used in roofing system investigations have been employed as appropriate to the nature of construction and use of the system. Roofing-type BIPV products have been investigated to those roofing standards, as appropriate to their construction and use.

When intended to serve as part of a structural component of a building, such as a curtain wall, facade, atrium, skylight, etc., the BIPV module is assumed to serve as a primary component of the building's exterior surface and is accessible from the interior space of the building. Mechanical control and protection of the system wiring should be provided as required by ANSI/NFPA 70, "National Electrical Code" (NEC), either applied to the interior of the system or integral to the support structure. BIPV modules intended to be mounted or retained within a metallic support structure have been investigated to ANSI/UL 790, "Standard Test Methods for Fire Tests of

Building-integrated Photovoltaic Modules and Panels
(QHZZ)—Continued

Building-integrated Photovoltaic Modules and Panels
(QHZZ)—Continued

Roof Coverings," for fire-resistance classification appropriate to the installation requirements (typically Class A). The combination of BIPV modules and the intended support structure should act as structurally reliable building components in terms of both loading and fire resistance.

When intended to serve as part of a nonstructural component of a building, such as a curtain wall, facade, atrium, skylight, etc., the BIPV module is assumed not to serve as a primary component of the building's exterior surface and is not accessible from the interior space of the building. Mechanical control and protection of the system wiring should be provided as required for structural BIPV systems, and the intended support structure should act as structurally reliable control of the module system alone, as required in ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels." BIPV modules have been investigated to ANSI/UL 790 for fire resistance.

In either the structural or nonstructural curtain wall, facade, atrium, skylight, etc. installation mode, the BIPV panel may be identified to be suitable for use with specific UL-certified BIPV mounting systems covered under Building-integrated Photovoltaic Mounting Systems (QHZZ).

The modules and panels are marked with manufacturer and model identification. The wiring system indicates the proper terminal polarity. The installation instructions supplied provides all required electrical data, such as voltages, currents, power ratings, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed) and appropriate means of connection between the modules and between the module array and the load, in accordance with the NEC.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the fire-resistance classification required.

FLAME CLASSES

When applicable, BIPV modules and panels intended for installation as a roofing system are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and panels that are not installed as roofing systems are identified with respect to their fundamental resistance to external fire exposure, or are marked "Not Fire Rated." For significance of external fire exposure classes, see Prepared Roof-covering Materials, Formed or Molded Metal, Fiber-Cement, Plastic or Fire-retardant-treated Wood (TFXX) and Roofing Systems (TGFU).

PRODUCT IDENTITY

One of the following product identities appears on the product:

- BIPV Module
- BIPV Module for Use with Certified Structural Support Systems
- BIPV Photovoltaic Panel
- BIPV Roofing Product

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Framed PV modules or panels that include a mounting means as part of the product and are not intended to be installed into or as part of the building surface or structure are covered under Photovoltaic Modules and Panels (QIGU).

AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Building Materials (AABM) and Roofing Materials and Systems (AARM).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

BIPV modules and mounting systems integral to or in addition to a building's roof system are additionally investigated to ANSI/UL 790, "Standard Test Methods for Fire Tests of Roof Coverings," and/or UL 997, "Wind Resistance of Prepared Roof Covering Materials," as appropriate.

Some products covered under this category have also been investigated to one or more of the following design qualification standards:

- IEC 61215, "Crystalline Silicon Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"
- EN 61215, "Crystalline Silicon Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"
- IEC 61646, "Thin-Film Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"
- EN 61646, "Thin-Film Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"
- IEC 61730-1, "Photovoltaic (PV) Module Safety Qualification – Part 1: Requirements for Construction," and IEC 61730-2, "Photovoltaic (PV) Module Safety Qualification – Part 2: Requirements for Testing"
- EN 61730-1, "Photovoltaic (PV) Module Safety Qualification – Part 1: Requirements for Construction," and EN 61730-2, "Photovoltaic (PV) Module Safety Qualification – Part 2: Requirements for Testing"

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

For those products which are also certified by UL to IEC and/or EN design qualification standards, one or more of the following statements is included on the product:

- ALSO CERTIFIED TO IEC 61215-[issue date]
- ALSO CERTIFIED TO EN 61215-[issue date]
- ALSO CERTIFIED TO IEC 61646-[issue date]
- ALSO CERTIFIED TO EN 61646-[issue date]
- ALSO CERTIFIED TO IEC 61730-1-[issue date] and IEC 61730-2-[issue date]
- ALSO CERTIFIED TO EN 61730-1-[issue date] and EN 61730-2-[issue date]

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "BIPV Module," "BIPV Photovoltaic Panel," "BIPV Roofing Product," "BIPV Module for Use with Classified Structural Support Systems," or other appropriate product name as shown in the individual Listings.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with IEC and/or EN design qualification standards. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: "ALSO CLASSIFIED IN ACCORDANCE WITH *," where "*" is one or more of the following:

- IEC 61215-(issue date)
 - EN 61215-(issue date)
 - IEC 61646-(issue date)
 - EN 61646-(issue date)
 - IEC 61730-1-(issue date) and IEC 61730-2-(issue date)
 - EN 61730-1-(issue date) and EN 61730-2-(issue date)
- *****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BUILDING-INTEGRATED PHOTOVOLTAIC MOUNTING SYSTEMS (QHZZ)

USE AND INSTALLATION

This category covers building-integrated photovoltaic (BIPV) mounting systems intended for use with specific Listed BIPV modules and panels (see Building-integrated Photovoltaic Modules and Panels [QHZZ]) that have been investigated for mounting integral to the structure of a building. The systems have been investigated for electric shock and fire hazards only.

Installation of BIPV modules and mounting systems integral to or in addition to a building's roof system may adversely affect the roof-covering materials' resistance to external fire exposure if the module and mounting system combination has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules and mounting system have an equal or greater fire-resistance rating than the roof-covering material.

The installation of these BIPV mounting systems and related modules or panels is intended to be in accordance with ANSI/NFPA 70, "National Electrical Code," in addition to any applicable building codes.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes.

FLAME CLASSES

When applicable, BIPV modules and mounting systems intended for installation as part of a roof are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules, panels and mounting systems that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Prepared Roof-covering Materials, Formed or Molded Metal, Fiber-Cement, Plastic or Fire-retardant-treated Wood (TFXX) and Roofing Systems (TGFU).

AS TO RISK OF ELECTRIC SHOCK AND FIRE HAZARDS ONLY

+

Control No.

* **BUILDING-INTEGRATED PHOTOVOLTAIC MOUNTING SYSTEM (or BIPV MOUNTING SYSTEM)**

+ For products additionally investigated for resistance to external fire exposure, the Classification Mark includes the words **CLASS A**, **CLASS B** or **CLASS C**, as appropriate.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISTRIBUTED GENERATION WIRING SYSTEMS AND HARNESSSES (QHZZ)

USE AND INSTALLATION

This category covers distributed generation wiring systems and harnesses intended for use with specific distributed generation equipment/devices such as photovoltaic modules, inverters, solar trackers, etc., as identified in the individual certifications.

The installation of these distributed generation wiring harnesses is intended to be in accordance with ANSI/NFPA 70, "National Electrical Code," in addition to any applicable building codes.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- DG Wiring Harness
- DG Wiring System
- Distributed Generation Wiring Harness
- Distributed Generation Wiring System
- Photovoltaic Wiring Harness
- Photovoltaic Wiring System
- PV Wiring Harness
- PV Wiring System

RELATED PRODUCTS

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT (QHWJ)

Distributed Generation Wiring Systems and Harnesses (QHZZ)–Continued

Low-concentration flat-plate modules are covered under Flat-plate, Low-concentration Photovoltaic Modules and Panels (QHZZ).

Photovoltaic concentrators are covered under Concentrator Photovoltaic Modules and Assemblies (QICP).

AC modules are covered under AC Modules (QHYZ).

Photovoltaic junction boxes are covered under Junction Boxes for Use in Photovoltaic Modules and Panels (QIJBZ).

Photovoltaic connectors are covered under Connectors for Use in Photovoltaic Systems (QIJQZ).

Multi-pole distributed generation connectors are covered under Multi-pole Connectors for Use in Photovoltaic Systems (QIFAZ).

Inverters and other distributed generation power converters are covered under Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH).

Wind turbines are covered under Large Wind Turbine Generating Systems (ZGEA) and Small Wind Turbine Generating Systems (ZGEN).

Solar electric and thermal trackers are covered under Photovoltaic Solar Trackers (QIKA).

Combiner boxes are covered under Distributed Generation Power Systems Accessory Equipment (QIIO).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 9703, "Outline of Investigation for Distributed Generation Wiring Harnesses."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Distributed Generation Wiring Harness" (or "DG Wiring Harness"), "Distributed Generation Wiring System" (or "DG Wiring System"), "Photovoltaic Wiring Harness" (or "PV Wiring Harness") or "Photovoltaic Wiring System" (or "PV Wiring System").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLAT-PLATE, LOW-CONCENTRATION PHOTOVOLTAIC MODULES AND PANELS (QHZZ)

USE AND INSTALLATION

This category covers flat-plate photovoltaic modules and panels that concentrate natural sunlight by a factor of 3 or less. These products use lenses and/or reflectors internal to or mounted directly on the laminate to concentrate natural sunlight on photovoltaic cells to increase output power. These products are intended to be mounted on buildings or on ground-supported frames. Roof-mounted low-concentration modules or panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface. Rack-mounted styles may also be installed separate from buildings. All low-concentration photovoltaic modules and panels are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC) and model building codes.

When mounted integral to a building's roof the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Low-concentration modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or assemblies generate to other types of power compatible with the intended loads. In addition to their voltage, current and power ratings, modules and assemblies are marked to indicate terminal polarity, and maxi-

Flat-plate, Low-concentration Photovoltaic Modules and Panels (QHZU)—Continued

mum series overcurrent device rating. Installation of the modules and assemblies, including connection between the modules and the assemblies and the load, static inverters or controller is intended to be in accordance with the NEC. Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes, including the class of roof covering.

FLAME CLASSES

When applicable, low-concentration modules and panels are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and assemblies that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Roof-covering Materials (TEVI) and Roofing Systems (TGFU).

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Low-concentration Photovoltaic Module
 - Low-concentration Photovoltaic Panel

RELATED PRODUCTS

Concentrator photovoltaic modules and assemblies with sunlight concentration of greater than 3x are covered under Concentrator Photovoltaic Modules and Assemblies (QICP).

Flat-plate photovoltaic modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category for the concentration of sunlight on photovoltaic cells only are contained in UL Subject 8703, "Outline of Investigation for Concentrator Photovoltaic Modules and Assemblies."

The basic standard used to investigate products in this category, with the exception of concentration of sunlight on photovoltaic cells, is ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low-concentration Photovoltaic Module" or "Low-concentration Photovoltaic Panel."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC CHARGE CONTROLLERS (QIBP)

USE AND INSTALLATION

This category covers permanently connected photovoltaic charge controllers that control the state of charge of storage batteries used in photovoltaic power systems.

Photovoltaic charge controllers are rated 600 V dc or less and are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," including Article 690.

These products include photovoltaic charge controller subassemblies for field installation in a specific terminal compartment in accordance with the instructions supplied with the subassembly. The markings identify the modules in which the subassemblies may be installed or the electrical rating parameters (e.g., V_{oc} and I_{sc}) of the modules with which they are to be used. The terminal compartments, modules and subassemblies are products of the same manufacturer.

Controllers having an enclosure that is identified with an enclosure type designation or as "Rain tight" or "Rainproof" are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Photovoltaic Charge Controller
 - Photovoltaic Charge Controller Subassembly

Photovoltaic Charge Controllers (QIBP)—Continued

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Charge Controller" or "Photovoltaic Charge Controller Subassembly," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONCENTRATOR PHOTOVOLTAIC MODULES AND ASSEMBLIES (QICP)

USE AND INSTALLATION

This category covers concentrator photovoltaic (CPV) modules and assemblies. These products use lenses and reflectors to concentrate sunlight on photovoltaic cells to increase output power. These products can be self-supporting, mounted on buildings or ground-supported frames. Roof-mounted concentrator modules or assemblies are evaluated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface. All CPV systems are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and model building codes.

CPV modules and assemblies are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or assemblies generate to other types of power compatible with the intended loads. In addition to their voltage, current and power ratings, modules and assemblies are marked to indicate terminal polarity, and maximum series overcurrent device rating. Installation of the modules and assemblies, including connection between the modules and the assemblies and the load, static inverters or controller is intended to be in accordance with the NEC. Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes, including the class of roof covering.

FLAME CLASSES

When applicable, modules and assemblies are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and assemblies that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated."

INSTALLATION CLASSES

The installation class for CPV modules and assemblies identifies the intended installation location as either general access areas designated "General," or restricted access areas designated "Restricted." General access units are able to be installed in open areas that may be contacted by the general public. Restricted access units are intended to be installed in areas that prevent general public access, such as a locked and fenced-in area.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Concentrator Photovoltaic Assembly
 - Concentrator Photovoltaic Module

RELATED PRODUCTS

Flat-plate photovoltaic modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

PRODUCT CATEGORIES BY CATEGORY CODE

Concentrator Photovoltaic Modules and Assemblies (QICP)—Continued

The basic requirements used to investigate products in this category are contained in UL Subject 8703, "Outline of Investigation for Concentrator Photovoltaic Modules and Assemblies."

Some products covered under this category have also been investigated to IEC 62108 (2007-12), "Concentrator Photovoltaic (CPV) Modules and Assemblies - Design Qualification and Type Approval."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

For those products which are also certified by UL to IEC 62108 (2007-12), the following statement is included on the product:

ALSO CERTIFIED TO IEC 62108 (2007-12)

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Concentrator Photovoltaic Module" or "Concentrator Photovoltaic Assembly."

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to IEC 62108 (2007-12). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: "ALSO CLASSIFIED IN ACCORDANCE WITH IEC 62108 (2007-12)."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC DC ARC-FAULT CIRCUIT PROTECTION (QIDC)

GENERAL

This category covers direct-current (dc) photovoltaic (PV) arc-fault circuit-protection devices intended for use in solar photovoltaic electrical energy systems as described in Article 690 of ANSI/NFPA 70, "National Electrical Code." This protection is intended to mitigate the effects of arcing faults that may pose a risk of fire ignition under certain conditions if the arcing persists.

These devices are intended for use in circuits rated 1000 V or less. They are intended for use in dc electrical systems that are supplied by a PV source, such as a module with solar cells designed to generate dc power when exposed to sunlight.

These devices have been investigated to determine their ability to recognize and react to arcing faults. They have also been investigated to determine resistance to unwanted tripping because of the presence of arcing that occurs in control and utilization equipment under normal operating conditions, and to verify that operation is not unduly inhibited by the presence of loads and circuit characteristics that may mask or attenuate unwanted arcing.

PRODUCT TYPES

Products covered under this category include PV dc arc-fault circuit-interrupters (AFCI), PV dc arc-fault detectors, PV dc interrupting devices, and inverters, converters, charge controllers and combiner boxes with integral arc-fault circuit-interrupter protection.

All of these products are further classified as a Type 1 or Type 2 device:

Type 1 — A device intended to detect or interrupt series arcing faults.

Type 2 — A device intended to detect or interrupt both series arcing faults and parallel arcing faults.

Photovoltaic DC Arc-fault Circuit Interrupters

These devices are intended to be installed in a solar PV energy system to interrupt power delivered to an arcing fault when an arcing fault is detected by the AFCI. They are intended to provide arcing protection to the PV system and wiring against the unwanted effects of arcing.

Photovoltaic DC Arc-fault Detectors

These devices are intended to provide arcing protection to the PV system and wiring against the unwanted effects of arcing by enabling a separate interruption or shorting device to interrupt power delivered to an arcing fault.

Photovoltaic DC Interrupting Devices

These devices are intended for installation in a solar PV energy system to interrupt a detected arcing fault. The device is generally enabled by another

Photovoltaic DC Arc-fault Circuit Protection (QIDC)—Continued

device that detects arcing, such as an arc-fault detector. The device can perform an interruption or shorting function as appropriate to interrupt power delivered to an arcing fault.

Inverters, Converters and Charge Controllers with Integral Arc-fault Circuit-Interrupter Protection

Inverters, converters and charge controllers with integral PV dc arc-fault circuit-interrupter protection are additionally investigated to UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources," and are covered under Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH).

Combiner Boxes with Integral Arc-fault Circuit-interrupter Protection

Combiner boxes with integral PV dc arc-fault circuit-interrupter protection are additionally investigated to UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources," and are covered under Distributed Generation Power Systems Accessory Equipment (QIIO).

PRODUCT MARKINGS

Products are marked "Type 1" or "Type 2" as appropriate. Products are additionally marked with the manufacturer's name, trademark, or other suitable means of identification, a type or catalog designation, the electrical ratings in dc voltage and load capacity in dc amperes, and short-circuit rating.

Products are also marked with the appropriate product identity as specified under **PRODUCT IDENTITY** below, where visible after installation.

Inverters, converters and charge controllers with integral arc-fault circuit-interrupter protection are marked "Photovoltaic Arc-Fault Circuit-Protection" or equivalent, where visible after installation.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Photovoltaic AFCI
- Photovoltaic AFD
- Photovoltaic Arc-fault Circuit Interrupter
- Photovoltaic Arc-fault Detector
- Photovoltaic ID
- Photovoltaic Interrupting Device
- PV AFC
- PV AFCI
- PV ID

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1699B, "Outline of Investigation for Photovoltaic (PV) DC Arc-Fault Circuit Protection."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Arc-fault Circuit Interrupter" (or "Photovoltaic AFCI" or "PV AFCI"), "Photovoltaic Arc-fault Detector" (or "Photovoltaic AFD" or "PV AFD") or "Photovoltaic Interrupting Device" (or "Photovoltaic ID" or "PV ID").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MODULES AND PANELS (QIGU)

USE AND INSTALLATION

This category covers flat-plate photovoltaic modules and panels intended for mounting on buildings or on ground-supported frames. Roof-mounted modules or panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are

Photovoltaic Modules and Panels (QIGU)—Continued

spaced away from the building’s roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building’s roof system may or may not adversely affect the roof-covering materials’ resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

Photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the intended loads. This category does not include AC modules; see AC Modules (QHYZ) for additional details. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with ANSI/NFPA 70, “National Electrical Code.”

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

FLAME CLASSES

When applicable, modules and panels are marked “Class A,” “Class B” or “Class C” to denote their resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked “Not Fire Rated.” For significance of external fire exposure classes, see Roof-covering Materials (TEVT) and Roofing Systems (TGFU).

PRODUCT IDENTITY

One of the following product identities appears on the product: Photovoltaic Module Photovoltaic Panel

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1703, “Flat-Plate Photovoltaic Modules and Panels.”

Some products covered under this category have also been investigated to one or more of the following design qualification standards:

- IEEE 1262, “IEEE Recommended Practice for Qualification of Photovoltaic (PV) Modules”
IEC 61215, “Crystalline Silicon Terrestrial Photovoltaic Modules – Design Qualification and Type Approval”
IEC 61646, “Thin-film Terrestrial Photovoltaic Modules – Design Qualification and Approval”
IEC 61730, “Photovoltaic (PV) Module Safety Qualification”
EN 61730, “Photovoltaic (PV) Module Safety Qualification”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Additional Certification Markings

For those products which are also certified by UL to IEEE, IEC and/or EN design qualification standards, one or more of the following statements is included on the product:

- ALSO CERTIFIED TO IEEE 1262-[issue date]
ALSO CERTIFIED TO IEC 61215-[issue date]
ALSO CERTIFIED TO IEC 61646-[issue date]
ALSO CERTIFIED TO IEC 61730-[issue date]
ALSO CERTIFIED TO EN 61730-[issue date]

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Photovoltaic Module” or “Photovoltaic Panel.”

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to IEEE, IEC or EN design qualification standards. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: “ALSO CLASSIFIED IN ACCORDANCE WITH *,” where “*” is one or more of the following:

- IEEE 1262-(issue date)
IEC 61215-(issue date)
IEC 61646-(issue date)
IEC 61730-(issue date)
EN 61730-(issue date)

Photovoltaic Modules and Panels (QIGU)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MODULES AND PANELS, REMANUFACTURED (QIGZ)

USE AND INSTALLATION

This category covers remanufactured flat-plate photovoltaic modules and panels intended for mounting on buildings or on ground-supported frames. Remanufactured flat-plate photovoltaic modules and panels are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Remanufactured flat-plate photovoltaic modules and panels are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Remanufactured flat-plate photovoltaic modules and panels are subject to the same requirements as new remanufactured flat-plate photovoltaic modules and panels.

Roof-mounted modules and panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building’s roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building’s roof, the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building’s waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building’s roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building’s roof system may adversely affect the roof covering materials’ resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

Remanufactured photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the intended loads. This category does not cover AC modules; see AC Modules (QHYZ) for additional details. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with ANSI/NFPA 70, “National Electrical Code.” Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

FLAME CLASSES

When applicable, modules and panels are marked “Class A,” “Class B” or “Class C” to denote their resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked “Not Fire Rated.” For significance of external fire exposure classes, see Roofing Systems (TGFU).

PRODUCT IDENTITY

One of the following product identities appears on the product: Remanufactured Photovoltaic Module Remanufactured Photovoltaic Panel

RELATED PRODUCTS

Additional certifications of flat-plate photovoltaic modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1703, “Flat-Plate Photovoltaic Modules and Panels.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Remanufactured Photovoltaic Module” or “Remanufactured Photovoltaic Panel.”

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MODULES AND PANELS WITH SYSTEM VOLTAGE RATINGS OVER 600 VOLTS (QIIA)

USE AND INSTALLATION

This category covers flat-plate photovoltaic modules and panels with system voltage ratings above 600 V up to and including 1000 V.

These modules and panels are intended for mounting on buildings or on ground-supported frames. Roof-mounted modules and panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof, the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building's roof system may or may not adversely affect the roof-covering materials' resistance to external fire exposure if the module has a lesser or no fire-resistance rating.

Photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the intended loads. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). Note that installation with a maximum photovoltaic system voltage over 600 V is intended to comply with Article 690, Part IX of the NEC.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

FLAME CLASSES

When applicable, modules and panels are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Roof-covering Materials (TEVT) and Roofing Systems (TGFU).

PRODUCT IDENTITY

One of the following product identities appears on the product:
Photovoltaic Module Over 600 Volts
Photovoltaic Panel Over 600 Volts

RELATED PRODUCTS

AC modules are covered under AC Modules (QHYZ).
Modules and panels with maximum system voltage ratings of 600 V or less are covered under Photovoltaic Modules and Panels (QIGU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

For products additionally investigated for resistance to external fire exposure, the Certification Mark includes the words "Class A," "Class B" or "Class C," as appropriate.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Module Over 600 Volts" or "Photovoltaic Panel Over 600 Volts."

For products additionally investigated for resistance to external fire exposure, the Listing Mark includes the words **Class A**, **Class B** or **Class C**, as appropriate.

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT (QHWJ)

Photovoltaic Modules and Panels with System Voltage Ratings Over 600 Volts (QIIA)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISTRIBUTED GENERATION POWER SYSTEMS ACCESSORY EQUIPMENT (QIIO)

GENERAL

This category covers actuators, blocking diodes, conduit boxes, photovoltaic combiner boxes, controllers (control boxes), communication modules, disconnects, distribution panels and transition boxes.

This accessory equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," including Articles 690 and 692.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Distributed Generation Communications Module
- Distributed Generation Interface Module
- Distributed Generation System Distribution Panel
- Distributed Generation Utility Interconnection Controller
- Photovoltaic Combiner Box
- Photovoltaic Disconnect
- Photovoltaic System Control Box
- Photovoltaic System Ground Fault Detector Interrupter
- Photovoltaic System Transition Box

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Distributed Generation Utility Interconnection Controller," "Photovoltaic System Ground Fault Detector Interrupter," "Photovoltaic System Transition Box," "Photovoltaic Disconnect," "Photovoltaic System Control Box," "Distributed Generation System Distribution Panel," "Distributed Generation Interface Module," "Distributed Generation Communications Module," "Photovoltaic Combiner Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISTRIBUTED RESOURCE POWER SYSTEMS (QIJL)

GENERAL

This category covers permanently connected distributed resource power systems, which may include combinations of components or products including, but not limited to, photovoltaic modules, fuel cells, synchronous generators, induction generators, batteries, energy-storage devices, inverters, converters, charge controllers, utility interconnection systems equipment and protection relays. This combination of equipment is intended to combine, convert, transform or relay energy from one or more ac or dc sources for use in stand-alone (not grid-connected to the Area EPS) and/or utility-interactive (grid-connected to the Area EPS) power systems to provide power to load/utilization equipment. Utility-interactive inverters and converters are intended to be installed in conjunction with an electric supply system Area EPS or an electric utility to supply energy to common loads.

Distributed Resource Power Systems (QIJL)—Continued

Distributed resource power systems are factory- or field-wired assemblies in which the combination has been investigated for operation as a system assembly when installed in accordance with the manufacturer's installation instructions.

These systems are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Distributed Resource Power System
- Photovoltaic Power System

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Photovoltaic modules and panels are investigated to ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels," and are also covered under Photovoltaic Modules and Panels (QIGU).

Equipment intended to provide a primary, secondary, or primary and secondary power source to specified or nonspecified loads in parallel or separate from the utility is investigated to UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources," and is also covered under Static Inverters and Converters for Use in Independent Power Systems (QIKH). Examples of this equipment are utility interactive, stand-alone, multimode inverters or converters, interconnection system equipment and photovoltaic charge controllers.

Internal-combustion-engine-driven electrical generating (engine generator or microturbine) equipment that consumes fuels such as gasoline, natural gas, LP-gas, diesel etc., is investigated to ANSI/UL 2200, "Stationary Generator Engine Assemblies," and is also covered under Engine Generators (FTSR).

These products may contain features or functions for combined heat and power production (CHP). CHP products that produce heat or perform a heat transfer function, in addition to electric power conversion, comply with the applicable requirements of ANSI/UL 1995, "Heating and Cooling Equipment," ANSI/UL 834, "Heating, Water Supply, and Power Boilers - Electric," UL 795, "Commercial-Industrial Gas Heating Equipment," and/or UL Subject 1279, "Outline of Investigation for Solar Collectors."

Batteries for energy-storage equipment are investigated to UL Subject 1973, "Outline of Investigation for Batteries for Use in Light Electric Rail (LER) Applications and Stationary Applications," and are also covered under Batteries for Use in Light Electric Rail and Stationary Applications (BBFX).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Distributed Resource Power System" or "Photovoltaic Power System," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC RAPID SHUTDOWN SYSTEMS (QIJS)

GENERAL

This category covers photovoltaic (PV) rapid shutdown systems intended for use in PV electrical energy systems as described in Article 690.12 of ANSI/NFPA 70, "National Electrical Code." The rapid shutdown protection is intended to reduce potential hazards and limit exposure to energized PV wiring and equipment to allow emergency first responders/fire fighters to perform work outside the energized area of the PV array.

These rapid shutdown systems are intended to be installed as part of the PV array system and the individual rapid shutdown system equipment

Photovoltaic Rapid Shutdown Systems (QIJS)—Continued

that performs functions including but not limited to combiners, disconnects, actuators, attenuators, indicators, inverters, and/or other PV system equipment functionality.

Some systems have been investigated to additional functional safety requirements for a higher level of reliability. These high reliability PV rapid shutdown systems have a higher system fault tolerance and reliability to perform their intended function under foreseeable single-point component/equipment and system failures. Only systems found to comply with these additional functional safety requirements are marked "High Reliability PV Rapid Shutdown System."

This equipment may also be investigated to functional safety standards for a higher level of fault tolerance as defined by the individual certification report; this equipment may be additionally marked "High Reliability Equipment." Field installation or interconnection of multiple pieces of rapid shutdown system equipment or components designated as "High Reliability" does not result in a high-reliability system. Only systems rated and marked "High Reliability PV Rapid Shutdown System" have been investigated and found compliant with the increased reliability requirements as a complete system.

PRODUCT IDENTITY

One of the following product identities appears on the system:

- High Reliability Photovoltaic Rapid Shutdown System
- Photovoltaic Rapid Shutdown System

The word "Photovoltaic" may be abbreviated "PV."

RELATED PRODUCTS

PV rapid shutdown system equipment that may be used to create portions of or complete PV rapid shutdown systems is covered under Photovoltaic Rapid Shutdown System Equipment (QIJW).

PV rapid shutdown system components of rapid shutdown systems which, on their own have not been investigated for field installation, are covered under Photovoltaic Rapid Shutdown System Equipment (QIJW2).

Inverters intended for use in PV systems are covered under Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH).

PV modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

PV circuit combiners (combiner boxes) are covered under Distributed Generation Power Systems Accessory Equipment (QIO).

Permanently connected PV charge controllers that control the state of charge of storage batteries used in PV power systems are covered under Photovoltaic Charge Controllers (QIBP).

Products that use lenses and reflectors to concentrate sunlight on PV cells to increase output power are covered under Concentrator Photovoltaic Modules and Assemblies (QICP).

PV switches are covered under the following categories:

- Switches, Dead-front for Use in Photovoltaic Systems (WHXX)
- Switches, Enclosed for Use in Photovoltaic Systems (WIBC)
- Switches, Molded Case for Use in Photovoltaic Systems (WJBE)
- Switches, Open Type for Use in Photovoltaic Systems (WHVA)
- Photovoltaic Manual-disconnect Switches (NMSJ and NMSJ2)

See Distributed Generation Wiring Systems and Harnesses (QHZZ).

Some PV system equipment as noted above may also have integral PV rapid shutdown system protection functionality and is marked to indicate the presence of both functions.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

For multi-piece systems, the Certification Mark appears on the outside of each complete piece of equipment or subassembly constituting a complete rapid shutdown system eligible for certification. The Certification Mark covers only the equipment to which it is affixed; it does not cover other enclosure sections included in the assembly. Each piece of equipment is marked "Photovoltaic Rapid Shutdown System Subassembly" and is provided with a "___ of ___" marking, where the second blank indicates the total number of assemblies contained in the certified system and the first blank indicates the respective assembly number bearing the Certification Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Photovoltaic Rapid Shutdown Systems (QIJS)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC RAPID SHUTDOWN SYSTEM EQUIPMENT (QIJW)

GENERAL

This category covers rapid shutdown system equipment suitable for field installation in compliance with ANSI/NFPA 70, "National Electrical Code" (NEC). It provides specific functionality which allows it to be combined and/or interconnected with other rapid shutdown system equipment to develop a complete rapid shutdown system.

This equipment may also be investigated to functional safety standards for a higher level of fault tolerance as defined by the individual certification report; this equipment may be additionally marked "High Reliability Equipment." The interconnection of multiple pieces of rapid shutdown system equipment designated as "High Reliability" does not result in a high-reliability system. Only systems rated and marked as "High Reliability" have been investigated and found compliant with the increased reliability requirements of a high-reliability system.

USE AND INSTALLATION

Photovoltaic (PV) rapid shutdown systems are intended for use in PV electrical energy systems as described in Article 690.12 of the NEC. These rapid shutdown systems are intended to reduce potential hazards and limit exposure to energized PV wiring and equipment to allow first responders to perform work outside the energized area of the PV array.

This equipment is intended to be installed as part of a PV system in conjunction with other equipment to perform functions related to rapid shutdown including but not limited to combiners, disconnects, actuators, attenuators, indicators, and/or other system equipment. This equipment is intended to be installed and operated per the installation instructions and also to be used within its electrical and environmental ratings. The operability of complete rapid shutdown systems built from devices covered under this category has not been determined.

PRODUCT IDENTITY

One of the following product identities appears on the product:
High Reliability Photovoltaic Rapid Shutdown System Equipment
Photovoltaic Rapid Shutdown System Equipment
The word "Photovoltaic" may be abbreviated "PV."

RELATED PRODUCTS

PV rapid shutdown systems are covered under Photovoltaic Rapid Shutdown Systems (QIJS).

Inverters intended for use in PV systems are covered under Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH).

PV modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

PV circuit combiners (combiner boxes) are covered under Distributed Generation Power Systems Accessory Equipment (QIIO).

Permanently connected PV charge controllers that control the state of charge of storage batteries used in PV power systems are covered under Photovoltaic Charge Controllers (QIBP).

Products that use lenses and reflectors to concentrate sunlight on PV cells to increase output power are covered under Concentrator Photovoltaic Modules and Assemblies (QICP).

PV switches are covered under the following categories:

- Switches, Dead-front for Use in Photovoltaic Systems (WHXX)
- Switches, Enclosed for Use in Photovoltaic Systems (WIBC)
- Switches, Molded Case for Use in Photovoltaic Systems (WJBE)
- Switches, Open Type for Use in Photovoltaic Systems (WHVA)
- Photovoltaic Manual-disconnect Switches (NMSJ) and NMSJ2

See Distributed Generation Wiring Systems and Harnesses (QHZZ).

Some PV system equipment as noted above may also have integral PV rapid shutdown system protection functionality and is marked to indicate the presence of both functions.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

(QIJW)—Continued

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC SOLAR TRACKERS (QIKA)

USE AND INSTALLATION

This category covers photovoltaic (PV) solar trackers intended for use with specific PV modules, panels, concentrated PV devices, and specified module frames and mounting structures as identified in the individual certifications.

PV solar trackers have been investigated with respect to risk of electric shock and fire hazards. PV solar trackers have been investigated for one of two installation types: (1) ground mounted, or (2) intended to serve as part of a nonstructural component of a building. Trackers intended to be installed in readily accessible locations have been investigated for all mechanical hazards as defined in UL Subject 3703, "Outline of Investigation for Solar Trackers." Products intended for installation in locations not readily accessible have been investigated with consideration given to the mechanical hazard requirements of UL Subject 3703.

In addition, other potential hazards may have been investigated as described in the Report for a specific product. Items covered may include, but are not limited to, the following features:

1. Creation of an equipotential ground bond from the module frames to the mounting platform and/or hardware in accordance with UL 2703, "Outline of Investigation for Mounting Systems, Mounting Devices, Clamping/Retention Devices, and Ground Lugs for Use with Flat-Plate Photovoltaic Modules and Panels." The overall system is intended to be grounded in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).
2. Mechanical loading of the completed platform in accordance with UL 2703.
3. The attachment of certified flat-plate photovoltaic modules and panels to the tracker platform.
4. Module-to-system mechanical reliability to the requirements of UL 2703.
5. The attachment of other certified photovoltaic equipment to the top of the tracker platform.

Only those features noted in the individual certifications and/or the Reports for specific products have been investigated by UL.

The installation of these solar trackers is intended to be in accordance with the NEC, in addition to any applicable building codes.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes, including the class of roof covering, and any additional safety investigations that may be required.

CLASSES

When applicable, modules or panels are identified as Class A, B or C to denote their resistance to external fire exposure. Modules or panels that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Roof-covering Materials (TEVT) and Roofing Systems (TGFU).

PRODUCT IDENTITY

One of the following product identities appears on the product:
Photovoltaic Solar Tracker
PV Solar Tracker

RELATED PRODUCTS

PV modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

Photovoltaic concentrators are covered under Concentrator Photovoltaic Modules and Assemblies (QICP).

AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 3703, "Outline of Investigation for Solar Trackers."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Photovoltaic Solar Trackers (QIKA)–Continued

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Solar Tracker" (or "PV Solar Tracker").

For products additionally investigated for resistance to external fire exposure, the Listing Mark includes the words CLASS A, CLASS B or CLASS C, as appropriate.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPECIAL-PURPOSE INVERTERS, CONVERTERS AND ACCESSORIES FOR USE IN ELECTRIC POWER SYSTEMS (QIKF)

USE AND INSTALLATION

This category covers special purpose, permanently connected inverters and converters for use in electric power systems. Special-purpose inverters are investigated to export power in parallel with an electric power system, such as the utility grid, and are similar to products covered under Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH), except that the special-purpose products may comply with individually defined utility interconnection requirements, which can include requirements covered under QIKH, as well as other utility interconnection requirements. The primary purpose of these special-purpose products is to produce and provide utility power and provide utility grid support in applications where locally unique interconnection requirements may exist.

Special-purpose inverters and converters are devices that change ac or dc power into ac electric power system (EPS) output power. Electric power systems are defined as facilities that deliver electric power to a load. Products covered under this category are classed as Utility Interactive or Multimode, which can also operate in a stand-alone mode. Optional accessories intended for use with these units are also covered under this category.

These products may contain or may be intended to connect to energy storage devices and provide charge and discharge controller functions. Products containing charge controllers are provided with instructions to indicate the type of battery for which they are intended.

These devices are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code,"

The devices may be connected to different types and combinations of distributed generation (DG) sources: generator sets, photovoltaic cells, fuel cells, wind and microturbines or other sources as specified in the manufacturer's installation instructions.

Some devices in this category are intended to be installed and operated with an external transformer. Such devices are provided with markings and instructions to indicate the type of transformer with which the product was investigated.

These products may require external output overcurrent protection, which is specified in product markings and installation instructions. The products require external overcurrent protection to be sized at 125% of the product output current rating unless otherwise specified.

These products may require that overcurrent protection be provided in the source circuits. These protection ratings are specified in the product installation instructions.

Units suitable for use with certified field-installed accessories are marked to identify the specific accessories that may be used.

For units that are shipped in multiple sections where the end product requires that all of the sections be included and assembled to make a complete certified product, the sections include the same end-product Certification Mark and are differentiated by section number as specified under **UL MARK** below.

For units that are shipped in multiple sections consisting of a complete end product and associated optional accessories investigated for use with the complete certified end product, the complete end product has a single Certification Mark and the accessory(ies) are labeled as specified under **UL MARK** below with one of the applicable accessory markings.

SURGE TESTING

These products may be investigated for compliance with specific surge categories for the Ring Wave and Combination Wave Surge Tests in IEEE C62.41.2 (2002), "Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits." These particular

Special-purpose Inverters, Converters and Accessories for Use in Electric Power Systems (QIKF)–Continued

surge waveforms that are applied to the DG equipment are based upon distance between the DG equipment and the service-entrance equipment. These location categories have associated peak values of voltage and current for the standard surge-testing waveforms as noted below. A manufacturer may also choose to test at a custom value for the Ring Wave and Combination Wave. These values are stated in the individual certifications for the product tested.

STANDARD WAVEFORM PEAK VALUES

Surge Category	Ring Wave	Combination Wave
A	6 kV/0.20 kA	N/A
B	6 kV/0.50 kA	6 kV/3 kA
C	N/A	20 kV/10 kA

The standard surge-testing waveforms are as follows:

- "Standard 1.2/50 μ s – 8/20 μ s Combination Wave"
- "Standard 0.5 μ s – 100 kHz Ring Wave"

Refer to IEEE C62.41.2 (2002) for additional details on standard wave parameters and tolerances.

CODES

FIRMWARE VERSION AND CHECKSUM

Version Number — Identification number of the software elements that specifies the investigated software version and current release.

Checksum or Unique Identifier — A unique identifier stored in nonvolatile memory computed as a function of the critical and supervisory sections of the software.

PRODUCT DESIGNATION

The product designation is the combination of the specific DG source and the type of inverter or converter product. One of the following product designations appears on the product:

- Special-purpose Interconnection System Equipment
- Special-purpose Utility-interactive Accessory
- Special-purpose Utility-interactive Converter
- Special-purpose Utility-interactive Inverter

The source type does not appear in the product designation; it must be indicated on the product as a separate marking.

RELATED PRODUCTS

Permanently connected inverters for use in independent power systems which have been investigated for compliance with the complete set of utility interconnection protection requirements as defined in IEEE 1547, "IEEE Standard for Interconnecting Distributed Resources with Electric Power Systems," are covered under Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH).

Permanently connected inverters for stand-alone use are covered under QIKH.

Permanently connected converters (devices that accept ac or dc power input and convert it to another form of ac or dc power for direct utilization by a load or accumulation in an energy storage system) are covered under QIKH.

Devices that charge batteries from photovoltaic sources are covered under Photovoltaic Charge Controllers (QIBP).

Photovoltaic circuit combiners (combiner boxes) are covered under Distributed Generation Power Systems Accessory Equipment (QIO).

Power converters and inverters intended for use in recreational or land vehicles and the like are covered under Power Converters/Inverters and Power Converter/Inverter Systems (QPPY).

Power converters and inverters intended for use in marine craft are covered under Power Converters/Inverters and Power Converter/Inverter Systems, Marine (QPQL).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT (QHWJ)

Special-purpose Inverters, Converters and Accessories for Use in Electric Power Systems (QIKF)—*Continued*

The basic standard used to investigate products in this category is UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources."

While UL 1741 provides a direct reference to IEEE 1547, "IEEE Standard for Interconnecting Distributed Resources with Electric Power Systems," and IEEE 1547.1, "IEEE Standard Conformance Test Procedures for Equipment Interconnecting Distributed Resources with Electric Power Systems," for the investigation of utility interconnection protection features and functions, products covered under this category may be provided with specifically defined portions of these standards and or other standards/documents.

Additional documents and/or requirements may be used to investigate products in this category. The documents and/or requirements that have been assessed for compliance are referenced in the individual certifications.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

For multi-piece units, the Certification Mark appears on each outside enclosure section constituting a complete inverter assembly eligible for certification. The Certification Mark covers only the enclosure section to which it is affixed; it does not cover other enclosure sections included in the assembly. Each enclosure section of a certified inverter assembly is provided with a "Section ____ of ____" marking, where the second blank indicates the total number of enclosure sections contained in the certified inverter assembly and the first blank indicates the respective enclosure section number bearing the Certification Mark.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product designation. The product designation is the combination of the specific DG source and the type of inverter or converter product. Acceptable product designations include:

- "Special-purpose Interconnection System Equipment"
- "Special-purpose Utility-interactive Accessory"
- "Special-purpose Utility-interactive Converter"
- "Special-purpose Utility-interactive Inverter"

For multi-piece units, the Listing Mark appears on each outside enclosure section constituting a complete inverter assembly eligible for Listing. The Listing Mark covers only the enclosure section to which it is affixed; it does not cover other enclosure sections included in the assembly. Each enclosure section of a Listed inverter assembly is provided with a "Section ____ of ____" marking, where the second blank indicates the total number of enclosure sections contained in the Listed inverter assembly and the first blank indicates the respective enclosure section number bearing the UL Mark.

The source type does not appear in the product designation; it must be indicated on the product as a separate marking.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STATIC INVERTERS, CONVERTERS AND ACCESSORIES FOR USE IN INDEPENDENT POWER SYSTEMS (QIKH)

USE AND INSTALLATION

This category covers permanently connected inverters and converters for use in electric power systems. Inverters are devices that change DC power to AC power. Converters are devices that accept AC or DC power input and convert it to another form of AC or DC power for direct utilization by a load or accumulation in an energy storage system (batteries, capacitors, etc.). Electric power systems are defined as facilities that deliver electric power to a load. Devices covered under this category are classed as Utility Interactive, Stand-alone or Multimode. Utility Interactive devices operate in parallel with the utility grid. Stand-alone devices are intended to operate independent of the utility grid. Multimode devices can operate as both or either Stand-alone (utility independent) or Utility Interactive devices. Optional accessories intended for use with these units are also covered under this category.

These products may contain energy storage devices and associated charge controllers.

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT (QHWJ)

Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH)—Continued

These devices are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

The devices may be connected to different types and combinations of distributed generation (DG) sources: generator sets, photovoltaic cells, fuel cells, wind and microturbines or other sources as specified in the manufacturer's installation instructions.

Some devices in this category are intended to be installed and operated with an external transformer. Such devices are provided with markings and instructions to indicate the type of transformer required.

These products may require external output overcurrent protection, which is specified in product markings and installation instructions. The products require external overcurrent protection to be sized at 125% of the product output current rating unless otherwise specified.

These products may require that overcurrent protection be provided in the source circuits. These protection ratings are specified in the product installation instructions.

Devices containing charge controllers are provided with instructions to indicate the type of battery for which they are intended.

Units suitable for use with certified field-installed accessories are marked to identify the specific accessories that may be used.

For units that are shipped in multiple sections where the end product requires that all of the sections be included and assembled to make a complete certified product, the sections include the same end-product Certification Mark and are differentiated by section number as specified under **UL MARK** below.

For units that are shipped in multiple sections consisting of a complete end product and associated optional accessories investigated for use with the complete certified end product, the complete end product has a single Certification Mark and the accessory(ies) are labeled as specified under **UL MARK** below, with one of the applicable accessory markings.

SURGE TESTING

These products are investigated to surge categories for the Ring Wave and Combination Wave Surge Tests in IEEE C62.41.2 (2002), "Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits." These particular surge waveforms that are applied to the DG equipment are based upon distance between the DG equipment and the service-entrance equipment. These location categories have associated peak values of voltage and current for the standard surge-testing waveforms as noted below. A manufacturer may also choose to test at a custom value for the Ring Wave and Combination Wave. These values are stated in the individual certifications for the product tested.

STANDARD WAVEFORM PEAK VALUES

Surge Category	Ring Wave	Combination Wave
A	6 kV/0.20 kA	N/A
B	6 kV/0.50 kA	6 kV/3 kA
C	N/A	20 kV/10 kA

The standard surge-testing waveforms are as follows:

- "Standard 1.2/50 µs – 8/20 us Combination Wave"
- "Standard 0.5 µs – 100 kHz Ring Wave"

Refer to IEEE C62.41.2 (2002) for additional details on standard wave parameters and tolerances.

If the source type does not appear in the product designation it must be indicated on the product as a separate marking.

RELATED PRODUCTS

Power converters and inverters intended for use in recreational or land vehicles and the like are covered under Power Converters/Inverters and Power Converter/Inverter Systems (QPPY).

Power converters and inverters intended for use in marine craft are covered under Power Converters/Inverters and Power Converter/Inverter Systems, Marine (QPQL).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources." UL 1741 provides a direct reference to IEEE 1547, "IEEE Standard for Interconnecting Distributed Resources with Electric Power Systems," and IEEE 1547.1, "IEEE Standard Conformance Test Procedures for Equipment Interconnecting Distributed Resources with Electric Power Systems," for the investigation of utility interconnection protection features and functions.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

For multi-piece units, the Certification Mark appears on each outside enclosure section constituting a complete inverter assembly eligible for certification. The Certification Mark covers only the enclosure section to which it is affixed; it does not cover other enclosure sections included in the assembly. Each enclosure section of a certified inverter assembly is provided with a "Section ____ of ____" marking, where the second blank indicates the total number of enclosure sections contained in the certified inverter assembly and the first blank indicates the respective enclosure section number bearing the Certification Mark.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product designation. The product designation is the combination of the specific DG source and the type of inverter or converter product. Acceptable product designations include:

- "Fuel Cell Multimode Inverter"
- "Fuel Cell Stand-alone Inverter"
- "Fuel Cell Utility Interactive Inverter"
- "Microturbine Multimode Inverter"
- "Microturbine Stand-alone Inverter"
- "Microturbine Utility Interactive Inverter"
- "Photovoltaic Multimode Inverter"
- "Photovoltaic Stand-alone Inverter"
- "Photovoltaic Utility Interactive Inverter"
- "Wind Turbine Multimode Inverter"
- "Wind Turbine Stand-alone Inverter"
- "Wind Turbine Utility Interactive Inverter"

(or equivalent)

The product designation for accessories is one of the product designations noted above, preceded by the words "Accessory for."

For multi-piece units, the Listing Mark appears on each outside enclosure section constituting a complete inverter assembly eligible for Listing. The Listing Mark covers only the enclosure section to which it is affixed; it does not cover other enclosure sections included in the assembly. Each enclosure section of a Listed inverter assembly is provided with a "Section ____ of ____" marking, where the second blank indicates the total number of enclosure sections contained in the Listed inverter assembly and the first blank indicates the respective enclosure section number bearing the UL Mark.

If the source type does not appear in the product designation it must be indicated on the product as a separate marking.

**DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT
(QHWJ)**

Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH)—*Continued*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOUNTING SYSTEMS, MOUNTING DEVICES,
CLAMPING DEVICES AND GROUND LUGS
FOR USE WITH PHOTOVOLTAIC MODULES
AND PANELS (QIMS)**

USE AND INSTALLATION

This category covers photovoltaic (PV) mounting systems, mounting devices, clamping devices (which may be for bonding and/or mechanical loading) and ground lugs tested in combination with specific PV modules and panels and specified module frames and mounting structures as identified in the individual certifications. These systems and devices are investigated for one of two installation types: (1) ground mounted, or (2) intended to serve as part of a nonstructural component of a building, such as a stand-alone system on a building, curtain wall, facade, atrium, skylight, etc., which is applied extant to the primary building structure. Both mounting systems and clamping devices may be investigated for mechanical mounting alone, or mechanical mounting and ground bonding as identified in the individual certifications. Ground lugs may be tested in combination with specific PV modules, specific PV module frames, or specific mounting-system rails as identified in the individual certifications.

Only those features noted in the individual certifications and/or the Reports for specific products have been investigated by UL.

The installation of these mounting systems, clamping devices or bonding devices is intended to be in accordance with ANSI/NFPA 70, "National Electrical Code," in addition to any applicable building codes.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes, including the class of roof covering, and any additional safety investigations that may be required.

FLAME CLASSES

When applicable, PV mounting systems are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure when installed in combination with specific PV modules and according to the PV mounting system installation instructions.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Photovoltaic Bonding Device
- Photovoltaic Ground Lug
- Photovoltaic Module Clamping Device
- Photovoltaic Mounting and Bonding Device
- Photovoltaic Mounting Device
- Photovoltaic Mounting System

The word "Photovoltaic" may be abbreviated "PV."

RELATED PRODUCTS

PV modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

Low-concentration flat-plate modules are covered under Flat-plate, Low-concentration Photovoltaic Modules and Panels (QHZU).

PV concentrators are covered under Concentrator Photovoltaic Modules and Assemblies (QICP).

AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 2703, "Outline of Investigation for Mounting Systems, Mounting Devices, Clamping/Retention Devices, and Ground Lugs for Use with Flat-Plate Photovoltaic Modules and Panels."

The System Fire Test Requirement from ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels," may be utilized in lieu of the UL 2703 Fire Test.

Ground lugs are additionally investigated to ANSI/UL 467, "Grounding and Bonding Equipment."

Constructions that penetrate roofing may be investigated utilizing the Wind-Driven Rain Test from UL Subject 2582, "Outline of Investigation for Ridge Vents."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**DISTRIBUTED GENERATION POWER SYSTEMS
EQUIPMENT (QHWJ)**

Mounting Systems, Mounting Devices, Clamping Devices and Ground Lugs for Use with Photovoltaic Modules and Panels (QIMS)—Continued

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Photovoltaic Mounting System," "Photovoltaic Module Clamping Device," "Photovoltaic Mounting Device," "Photovoltaic Bonding Device," "Photovoltaic Mounting and Bonding Device" or "Photovoltaic Ground Lug." The word "Photovoltaic" may be abbreviated "PV."

For PV mounting systems additionally investigated for resistance to external fire exposure, the Listing Mark includes the words **CLASS A**, **CLASS B** or **CLASS C**, as appropriate.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PHOTOVOLTAIC LANTERNS,
PORTABLE SOLAR, CERTIFIED FOR
THE PV GAP MARK (QIMV)**

GENERAL

This category covers portable solar photovoltaic (PV) lanterns, which are lighting systems that most often include the following components: lamps (fluorescent, LED, etc.), energy storage device (batteries, capacitors, etc.), switch, charger controllers, and PV cells or modules. With the exception of the PV module that may be integrated or separated, each system is placed in a suitable housing.

These PV lanterns are certified for the PV Global Approval Mark (GAP) as an extension of the CB Full Certification Scheme (CB-FCS) based on authorization from the International Electrotechnical Commission's System for Conformity Testing and Certification of Electrical Equipment and Components (IECEE). IECEE is the administrator of the PV Global Approval Program (PV GAP). This certification is in accordance with PVR5 11A, "Portable Solar Photovoltaic (PV) Lanterns – Design Qualification and Type Approval." In addition to the CB Certification under the CB-FCS program, ISO 9000 registration and an ongoing product follow-up surveillance program are required. UL is a member of the IECEE, and is a National Certification Body (NCB). PVR5 11A is in the Scope of UL's participation in the CB-FCS. IECEE has authorized UL to offer the PV GAP Quality Mark as described below on the basis of and as an extension to UL's CB-FCS program. The number "62" has been assigned to UL as a unique code to be applied to the certified product adjacent to the PV GAP Quality Mark and the PV GAP Seal in order to distinguish between the PV GAP Marks issued by UL and those granted by other NCBs.

This certification is not considered a safety certification. This certification is for design qualification and type approval of portable solar PV lanterns in accordance with PVR5 11A.

REQUIREMENTS

The basic standard used to investigate products in this category is PVR5 11A, "Portable Solar Photovoltaic (PV) Lanterns – Design Qualification and Type Approval."

PV GAP QUALITY MARK AND SEAL

The PV GAP Quality Mark and Seal issued by UL consists of the following images and the accompanying numeric code "62."

The PV GAP Quality Mark is applied to each component of the portable solar PV lantern system:

The PV GAP Seal is applied to the portable solar PV lantern system as a whole:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PHOTOVOLTAIC MODULES AND PANELS CERTIFIED FOR THE
PV GAP MARK (QIMY)**

**PHOTOVOLTAIC MODULES AND
PANELS CERTIFIED FOR THE PV
GAP MARK (QIMY)**

GENERAL

This category covers flat-plate photovoltaic (PV) modules and panels intended for mounting on buildings or on ground-supported frames.

These PV modules and panels are certified for the PV Global Approval Mark (GAP) as an extension of the CB Full Certification Scheme (CB-FCS) based on authorization from the International Electrotechnical Commission's System for Conformity Testing and Certification of Electrical Equipment and Components (IECEE). IECEE is the administrator of the PV Global Approval Program (PV GAP). This certification is in accordance with IEC 61215, "Crystalline Silicon Terrestrial Photovoltaic Modules – Design Qualification and Type Approval," and IEC 61646, "Thin-Film Terrestrial Photovoltaic Modules – Design Qualification and Type Approval." In addition to the CB Certification under the CB-FCS program, ISO 9000 registration and an ongoing product follow-up surveillance program are required. UL is a member of the IECEE, and is a National Certification Body (NCB). IEC 61215 and IEC 61646 are in the Scope of UL's participation in the CB-FCS. IECEE has authorized UL to offer the PV GAP Quality Mark as described below on the basis of and as an extension to UL's CB-FCS program. The number "62" has been assigned to UL as a unique code to be applied to the certified product adjacent to the PV GAP Quality Mark in order to distinguish between the PV GAP Marks issued by UL and those granted by other NCBs.

These products may also bear UL's Listing Mark for PV modules and panels; see Photovoltaic Modules and Panels (QIGU).

Although this certification may be issued in conjunction with a safety certification, this certification is not considered a safety certification. This certification is for design qualification and type approval of PV modules and panels in accordance with IEC 61215 and IEC 61646.

REQUIREMENTS

The basic standards used to investigate products in this category are IEC 61215, "Crystalline Silicon Terrestrial Photovoltaic Modules – Design Qualification and Type Approval," and IEC 61646, "Thin-Film Terrestrial Photovoltaic Modules – Design Qualification and Type Approval."

PV GAP QUALITY MARK

The PV GAP Quality Mark issued by UL consists of the following image and the accompanying numeric code "62," and is applied to each PV module and panel:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOGRAPHIC EQUIPMENT (QINT)

GENERAL

This category covers the following photographic equipment and accessories:

Motion picture projectors for use with 8 mm, 16 mm, 35 mm and larger motion picture film, including associated equipment suitable for use in projection booths. Users should consult with Authorities Having Jurisdiction for requirements on installation and use. 8 mm and 16 mm projectors are commonly of the portable type intended for nonprofessional use with slow-burning film only. Projectors for use with 35 mm or larger film are intended for professional use and may employ flammable (nitro-cellulose) or slow-burning (cellulose acetate or equivalent) films. Projectors for use with flammable films should be installed and used only in fire resistance booths as recommended by ANSI/NFPA 40, "Storage and Handling of Cellulose Nitrate Film." These projectors can be divided into two general classes of construction: (1) Complete assemblies, usually of the portable type, having all parts needed for projection of motion picture film, with or without facilities for reproduction of sound recorded on films; and (2) Pedestal types which are intended for use with other certified components to form a complete machine, usually composed of a base, projection head and magazines with fire rollers.

Still-picture projectors for use with slides, pictures, drawings or similar stationary graphic material of a slow-burning classification, including opaque and overhead projectors and combination slide projectors or film strip projectors with phonograph or audio tape players.

Accessories intended for installation on projectors or employed in conjunction with viewing, editing or handling of films used with picture projectors.

PRODUCT CATEGORIES BY CATEGORY CODE

Equipment intended for use in taking photographs, processing and handling of photographic film or photographic prints and accessory equipment including film dryers, cutters, sorters, rewinders and silver-recovery units.

Equipment intended to take photographs from video display units.

REBUILT PRODUCTS

This category also covers photographic equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt photographic equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt photographic equipment is subject to the same requirements as new photographic equipment.

PRODUCT IDENTITY

The following product identity appears on the product:

Photographic Equipment

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product identity.

RELATED PRODUCTS

For portable toy machines for use with slow-burning films, see Toys (XNIZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 122, "Photographic Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photographic Equipment" or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PIN-AND-SLEEVE-TYPE PLUGS, RECEPTACLES AND CABLE CONNECTORS (QLGD)

RATINGS

Pin-and-sleeve-type plugs, receptacles and cable connectors are rated in 600 V or less, ac or dc, and in amps. Devices intended for use with motor loads are identified by a horsepower rating. Devices not intended for current interruption are marked "Do Not Disconnect Under Load," or with an equivalent statement.

Devices rated 250 V are tested on circuits involving a nominal potential to ground of 125 V. Devices having other voltage ratings are tested on circuits involving full-rated potential to ground, except for multiphase-rated devices, which are tested on circuits consistent with their voltage ratings, i.e., a 120/208 V, 3-phase device is tested on a circuit involving a potential to ground of 120 V.

Devices identified as "switch-rated plugs and receptacles suitable as motor circuit disconnect switches" incorporate a "switch" mechanism that has been additionally investigated for making and breaking a motor load. They have provision to open the electrical circuit without uncoupling the mated plug-and-receptacle housings (device enclosures). Such devices are investigated at six times the full load motor continuous current at rated voltage and are also identified by a horsepower rating. These devices have also been investigated for a minimum 10,000 A short-circuit make and withstand rating.

Devices identified as "switch-rated plugs and receptacles suitable as branch circuit disconnect switches" incorporate an integrally formed "switch" suitable for use in branch circuit switching applications. They have provision to open the electrical circuit without uncoupling the mated plug and receptacle housings. These devices have also been investigated for a minimum 10,000 A short-circuit make and withstand rating.

GROUNDING

Devices having a terminal identified by a green-colored finish or by the word "green" are grounding types. The pin or contact member connected to this terminal is for equipment grounding only.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ATTACHMENT PLUGS, PIN-AND-SLEEVE TYPE (QLHN)

GENERAL

This category covers pin-and-sleeve-type attachment-plug bodies, attachment plugs with and without fuses, cord connectors and adapters. These devices are intended for use with the same line of products covered under Receptacles, Pin-and-Sleeve Type (QLIW). Devices for use in specific combinations with other manufacturers' products are covered under Receptacle-Plug Combinations, Pin-and-Sleeve Type, Certified for Use in Specific Combinations (QLKH).

The termination provisions of these devices are based on the use of flexible cord or cable having copper conductors, in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). The ampacity of the flexible cord and cable is based on Section 400.5 and Tables 400.5(A)(1) and 400.5(A)(2) of the NEC.

The conductors are sized as specified on the product or in the manufacturer's instructions provided with the device.

If no instructions or marking is provided, the termination provisions are based on the use of 60°C insulated conductors in circuits rated 100 A or less or the use of 75°C insulated conductors in circuits rated more than 100 A, as specified in Section 400.5 and Tables 400.5(A)(1) and 400.5(A)(2) of the NEC.

Terminals intended for use with 75°C insulated conductors in circuits rated 100 A or less are marked on the device or on the smallest unit container in which the product is packaged, or on an instruction sheet provided in the smallest unit container in which the product is packaged.

This category does not cover devices to be molded on flexible cord or cable and unassembled devices to be factory assembled to flexible cord or cable.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Connector
- Pin-and-Sleeve Attachment Plug
- Plug

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Pin-and-Sleeve-type Plugs, Receptacles and Cable Connectors (QLGD) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1682, "Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type."

Devices identified as switch-rated plugs/receptacles are additionally investigated to UL Subject 2682, "Outline of Investigation for Switch-Rated Plugs and Receptacles."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pin-and-Sleeve Attachment Plug," "Plug" or "Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES, PIN-AND-SLEEVE TYPE (QLIW)

GENERAL

This category covers pin-and-sleeve-type receptacles and other outlet devices intended for direct connection to wiring systems recognized by ANSI/NFPA 70, "National Electrical Code" (NEC). It also covers other pin-and-sleeve-type receptacles, outlet devices and power inlets intended for use in appliances and other equipment.

These devices are intended for use with the same line of products covered under Attachment Plugs, Pin-and-Sleeve Type (QLHN). Devices for use in specific combinations with other manufacturers' products are covered under Receptacle-Plug Combinations, Pin-and-Sleeve Type, Certified for Use in Specific Combinations (QLKH).

The terminations of these devices are intended for use with copper conductors and are marked to indicate the conductor size and temperature rating of all field-installed conductors. Such markings are located where readily visible on the device or in a wiring diagram or instructions provided with the device. If no instructions or marking is provided, the termination provisions are based on the use of 60°C insulated conductors in circuits rated 100 A or less or the use of 75°C insulated conductors in circuits rated more than 100 A, as specified in Table 310.15(B)(16) of the NEC.

Terminals intended for use with 75°C insulated conductors in circuits rated 100 A or less are marked on the device or on the smallest unit container in which the product is packaged, or on an instruction sheet provided in the smallest unit container in which the product is packaged.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Pin-and-Sleeve Receptacle
- Power Inlet
- Receptacle
- Switch Receptacle

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Pin-and-Sleeve-type Plugs, Receptacles and Cable Connectors (QLGD) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1682, "Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type."

Devices identified as switch-rated plugs/receptacles are additionally investigated to UL Subject 2682, "Outline of Investigation for Switch-Rated Plugs and Receptacles."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Pin-and-Sleeve Receptacle," "Receptacle," "Switch Receptacle," "Power Inlet," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE-PLUG COMBINATIONS, PIN-AND-SLEEVE TYPE, CERTIFIED FOR USE IN SPECIFIC COMBINATIONS (QLKH)

USE

This category covers combinations of pin-and-sleeve-type plugs, receptacles, power inlets and connectors that have been investigated for use in specific combinations as indicated in the individual certifications.

These combination devices have been investigated for use with other manufacturers' certified plugs, receptacles, connectors or power inlets. The

basic certifications are covered under Attachment Plugs, Pin-and-Sleeve Type (QLHN) and Receptacles, Pin-and-Sleeve Type (QLIW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1682, "Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type."

Devices identified as switch-rated plugs/receptacles are additionally investigated to UL Subject 2682, "Outline of Investigation for Switch-Rated Plugs and Receptacles."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. These products bear the Certification Mark for Attachment Plugs, Pin-and-Sleeve Type (QLHN) or Receptacles, Pin-and-Sleeve Type (QLIW).

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

Also Certified for Use in Specific Combinations

For Use with UL-Certified *

Catalog No. ____

* **Receptacle, Plug or Connector**

or

Also Certified for Use in Specific Combinations

For catalog numbers of compatible devices, refer to Publication No. ____ provided with this device.

If additional information is necessary, contact the factory.

The referenced publication is a compatibility list, which tabulates the company name, catalog number and electrical ratings of the certified device and the company name and catalog number of the applicable UL-certified product with which it has been investigated. One copy of the compatibility list is provided with each device.

Alternate UL Mark

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the appropriate Listing Mark, the statement "Also Classified by Underwriters Laboratories Inc. for use in specific combinations," and one of the following statements as appropriate: "For use with UL Listed *, Catalog No. ____," or "For catalog numbers of compatible devices, refer to Publication No. ____ provided with this device. If additional information is necessary contact the factory."

* "Receptacle," "Plug" or "Connector"

The referenced publication is a compatibility list, which tabulates the company name, catalog number and electrical ratings of the Classified device and the company name and catalog number of the applicable UL Listed product with which it has been investigated. One copy of the compatibility list is provided with each device.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLASTICS USED IN SEMICONDUCTOR TOOL CONSTRUCTION (QMTW)

GENERAL

This category covers plastic materials used in the semiconductor tool construction industry. Plastic in the form of sheets, panels and strips has been investigated with respect to flammability characteristics only. The structural, washability, light reflectivity, durability, toxicity or environmental impact of the products of combustion and other properties have not been investigated. In addition, the suitability of the materials to be fabricated has not been investigated.

The following flammability and physical properties are investigated and published in the individual certifications:

- Flame Propagation Index (FPI)
- Smoke Damage Index (SDI)
- Nominal Thickness (in.)
- Product Geometry
- Manufacturing Method

PLASTICS USED IN SEMICONDUCTOR TOOL CONSTRUCTION (QMTW)

In addition to the above, the following data is available based on authorization of the test sponsor:

- Parallel Panel Test, Maximum Vertical Flame Propagation (ft.) (if required)
- Maximum Heat Release Rate (kW/m²)
- Maximum Smoke Release Rate (m²/sec)
- Critical Ignition Flux (kW/m²)
- Time Dependent Plot of Heat Release Rate
- Time Dependent Plot of Mass Loss Rate
- Time Dependent Plot of Smoke Obscuration
- Time Dependent Plot of CO Concentration
- Time to Ignition (sec)
- Flame Duration (sec)
- Total Smoke (m²)
- Mass Loss (%)
- Average Effective Heat of Combustion
- Average Specific Extinction Area

The materials are identified as "Nonpropagating - Class 1," "Limited Propagating - Class 2" or "Slow Propagating - Class 3." The individual certifications are defined as follows:

Test	Description	Nonpropagating, Class 1	Limited Propagating, Class 2	Slow Propagating, Class 3
Parallel Panel Test	Flame propagation	4 ft or less	8 ft or less	8 ft or less at 10 min
	Pooling of melted material	No	No	No
Heat and smoke release ^a	Fire propagation index (FPI)	6 or less	Parallel panel required	Parallel panel required
	Smoke damage index (SDI)	0.4 or less	0.4 or less	less than 1

^aASTM E1354 (1997), "Standard Test Method for Heat and Visible Smoke Release Rates for Materials and Products Using an Oxygen Consumption Calorimeter" (American Society for Testing and Materials, Philadelphia, PA)

PRODUCT IDENTITY

The following product identity appears on the product:
Plastic

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2360, "Test Methods for Determining the Combustibility Characteristics of Plastics Used in Semiconductor Tool Construction." The combustibility characteristics provide data with regard to the Flame Propagation Index (FPI) and the Smoke Damage Index (SDI).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR USE IN SEMICONDUCTOR TOOL CONSTRUCTION

* **NONPROPAGATING - CLASS 1, LIMITED PROPAGATING - CLASS 2** or **SLOW PROPAGATING - CLASS 3** as applicable to the product

**Alternate UL Mark
UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**PLASTIC
FOR USE IN SEMICONDUCTOR TOOL CONSTRUCTION**

Control No.

* the "propagating" statement "(Non-Propagating - Class 1," "Limited Propagating - Class 2," or "Slow Propagating - Class 3") applicable to the product

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

PLASTICS USED IN SEMICONDUCTOR TOOL CONSTRUCTION (QMTW)

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLUMBING ACCESSORIES (QMTX)

GENERAL

This category covers plumbing accessories connected to or used with plumbing in commercial locations or residential occupancies, including irrigation equipment, sprinkler controls, water controls located in kitchens and bathrooms, electric faucets, toilet-flushing systems, lawn sprinklers, plumbing controls, hydromassage chairs and pedicure spas.

This category also covers toilets, bidets, and combination toilet/bidets. Products suitable for outdoor use and those for use with heated liquids are so marked.

These products have not been investigated with respect to the effect of their use with corrosive liquids or aqueous solutions containing corrosive materials.

REBUILT PRODUCTS

This category also covers plumbing accessories that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt plumbing accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt plumbing accessories are subject to the same requirements as new plumbing accessories.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Electric Faucet
- Lawn Sprinkler Control

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt" precedes the product identity.

RELATED PRODUCTS

Similar equipment for use with or in proximity to swimming pools or spas is covered under Swimming Pool and Spa Equipment (WABX).

Products and materials investigated for contact with drinking water are certified to ANSI/NSF 61 and are covered under Drinking Water System Components (FDNP).

Plumbing fixture fittings investigated to ASME A112.18.1, ASSE 1014 and ASSE 1025 are covered under Plumbing Fixture Fittings (QNSQ).

Pumps are covered under Pumps, Electrically Operated, Liquid (REUZ). See also Pumping Equipment for Fire Service (QVUT).

Toilet seat assemblies (including bidet seats) containing electrical features, such as heating and water-dispensing components, that connect to separate plumbing features are covered under Personal Hygiene and Health Care Appliances (QGRZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1951, "Electric Plumbing Accessories."

Some products covered under this category have also been investigated to ANSI/ASME A112.19.7M (issue date of standard or latest addendum), "Requirements for Whirlpool Bathtub Appliances," or the water retention test requirement from ANSI/ASME A112.19.7M (issue date of standard or latest addendum).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

For those products which are also certified by UL to ANSI/ASME A112.19.7M, the following information is included on the product:

ALSO CERTIFIED TO ANSI/ASME A112.19.7M-*

or

ALSO CERTIFIED TO WATER RETENTION TEST REQUIREMENT FROM ANSI/ASME A112.19.7M-*

* Issue date of standard or latest addendum

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Faucet" or "Lawn Sprinkler Control," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt" precedes the product name.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with standards or parts detailed below from

standards of the American National Standards Institute (ANSI). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above along with the following:

“ALSO CLASSIFIED IN ACCORDANCE WITH *,” where “*” is one of the texts detailed below.

1. ANSI/ASME A112.19.7M-+
 2. WATER RETENTION TEST REQUIREMENT FROM ANSI/ASME A112.19.7M-+
- + Issue date of standard or latest addendum

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLUMBING ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (QNHV)

GENERAL

This category covers pump assemblies and controls for use in pumping sewage. Assemblies exposed to sewage have constructions intended to reduce corrosion of enclosure parts and explosion-proof joints. They have not been investigated for use where severe corrosive conditions are likely to be present.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Control Unit for Use in Hazardous Locations
Submersible Sump Pump for Use in Hazardous Locations
Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AALZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 674, “Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations” and/or the basic requirements contained in UL Subject 1836, “Outline of Investigation for Electric Motors and Generators for Use in Class I, Division 2 and Class II, Division 2 Hazardous (Classified) Locations.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Control Unit for Use in Hazardous Locations” or “Submersible Sump Pump for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE ELECTRIC HAND LAMPS (QORX)

GENERAL

This category covers portable electric hand lamps of the incandescent, LED and fluorescent types, rated 125 V, 300 W or less. These products have a length of flexible cord and an attachment plug for connection to a source of supply, an insulating handle, a lamp guard if applicable, and provisions for temporary support. These products are not intended for outdoor use unless marked “Suitable for Wet Locations,” or for use in hazardous (classified) locations or above hazardous locations as defined in ANSI/NFPA 70, “National Electrical Code.”

PRODUCT IDENTITY

The following product identity appears on the product:
Portable Hand Lamp

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, “Portable Luminaires.”

Products employing LED light sources are additionally investigated to ANSI/UL 8750, “Light Emitting Diode (LED) Equipment for Use in Lighting Products.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Portable Hand Lamp.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE LIGHTING PRODUCTS (QOTU)

GENERAL

This category covers lampshades, nightlights, light-emitting-diode (LED) nightlights, office furnishing lights, portable cabinet luminaires, portable cabinet LED luminaires, portable luminaire kits and subassemblies, portable luminaires, portable LED luminaires, portable work lights, and sun and heat lamps.

RELATED PRODUCTS

Portable lighting products and associated furnishings investigated for use together are covered under Furnishings, Household and Commercial (YQX).

Portable lighting products used as hand lamps are covered under Portable Electric Hand Lamps (QORX) or Portable Hand Lamp Accessories (QOSV).

Portable lighting products intended for seasonal use are covered under Christmas Tree and Decorative Outfit Accessories (DGWU), Outfits, Decorative (DGXW) or Strings, Decorative Lighting (DGZZ).

Portable lighting products intended for use in hazardous (classified) locations are covered under Portable Lighting Units for Use in Hazardous Locations (QPKX).

Portable lighting products intended for temporary use (such as at construction sites or car sales lots) are covered under Temporary-lighting Strings (XBRT).

Portable lighting products intended for theatrical use are covered under Stage and Studio Luminaires, Accessories and Connector Strips (IFDZ).

PORTABLE CABINET LIGHT-EMITTING-DIODE LUMINAIRES (QOVA)

USE AND INSTALLATION

This category covers surface- and recess-mounted portable cabinet light-emitting-diode (LED) luminaires intended for installation into open or enclosed portable cabinets, such as china hutches, bookcases, bars, consoles, bed headboards, and similar locations.

This category also covers low-voltage LED lighting systems intended for installation under a shelf, cabinet or similar structural surface, in accordance with Article 411 of ANSI/NFPA 70, “National Electrical Code” (NEC), where the power supply is of the attachment plug equipped, cord-connected type, or is a direct-plug-in type.

This category also covers portable cabinet LED luminaire accessories, such as interconnecting cord sets and dimmer and switch assemblies, intended for use with portable cabinet LED luminaires.

A surface-mounted portable cabinet LED luminaire is also suitable for installation under a shelf or kitchen cabinet when the line voltage power-supply cord is not concealed.

These products are not intended for installation in recessed walls or ceilings, or in permanently installed cabinets where the wiring is concealed or passed through openings in the structure.

Portable cabinet LED luminaires have been investigated for mounting in accordance with the clearances marked on the product. Portable cabinet

Portable Cabinet Light-emitting-diode Luminaires (QOVA)—Continued

luminaires not marked with clearances may be mounted as close to any surface as permitted by the housing, an integral mounting flange, bracket or spacer.

A restrictive marking is provided for portable cabinet luminaires intended for use only in open-top cabinets. Portable cabinet luminaires without the restrictive marking are investigated for a 1/2 in. (13 mm) minimum clearance from the top.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Portable Cabinet LED Luminaire
- Portable Cabinet LED Luminaire Accessory
- Portable Cabinet Light-emitting-diode Luminaire
- Portable Cabinet Light-emitting-diode Luminaire Accessory

RELATED PRODUCTS

LED luminaires intended for installation in permanently installed cabinets, where the wiring is concealed or passed through openings in the structure, are covered under Light-emitting-diode Surface-mounted Luminaires (IFAM) for surface mounting, or Light-emitting-diode Recessed Luminaires (IFAO) for recessed mounting.

Low-voltage LED lighting systems intended for installation in accordance with Article 411 of the NEC in permanently installed cabinets, having a remote power source connected to a fixed wiring means, are covered under Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR).

Portable cabinet LED luminaires investigated for use with specific cabinet or display designs are certified together with the cabinet or display as Furnishings, Household and Commercial (IYQX).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 153, "Portable Electric Luminaires," and ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Cabinet Light-emitting-diode Luminaire" (or "Portable Cabinet LED Luminaire") or "Portable Cabinet Light-emitting-diode Luminaire Accessory" (or "Portable Cabinet LED Luminaire Accessory").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE CABINET LUMINAIRES (QOVJ)

USE AND INSTALLATION

This category covers surface and recess-mounted portable cabinet luminaires intended for installation into open or enclosed portable cabinets such as china hutches, bookcases, bars, consoles, bed headboards, and similar locations.

This category also covers low-voltage lighting systems intended for installation under a shelf, cabinet, or similar structural surface, in accordance with Article 411 of ANSI/NFPA 70, "National Electrical Code" (NEC), where the power supply is of the attachment plug equipped, cord-connected type, or is a direct plug-in type.

This category also covers portable cabinet luminaire accessories, such as interconnecting cord sets and dimmer and switch assemblies intended for use with portable cabinet luminaires.

A surface-mounted portable cabinet luminaire is also suitable for installation under a shelf or kitchen cabinet when the line voltage power-supply cord is not concealed.

These products are not intended for installation in recessed walls or ceilings, or in permanently installed cabinets where the wiring is concealed or passed through openings in the structure.

A portable cabinet luminaire connected to a Class 2 power supply that is suitable for installation inside a kitchen cabinet or other built-in furnishing is provided with instructions that advise:

Portable Cabinet Luminaires (QOVJ)—Continued

1. the Class 2 power supply shall be located outside the cabinet and not concealed, and
2. the line voltage power-supply cord shall not be concealed or run through openings in the cabinets, walls, ceilings or floors.

Portable cabinet luminaires have been investigated for mounting in accordance with the clearances marked on the product. Portable cabinet luminaires not marked with clearances may be mounted as close to any surface as permitted by the housing, an integral mounting flange, bracket or spacer.

A restrictive marking is provided for portable cabinet luminaires intended for use only in open top cabinets. Portable cabinet luminaires without the restrictive marking are investigated for a 13 mm (1/2 in.) minimum clearance from the top.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Portable Cabinet Light
- Portable Cabinet Luminaire
- Portable Cabinet Luminaire Accessory

RELATED PRODUCTS

Incandescent or fluorescent luminaires intended for installation in permanently installed cabinets, where the wiring is concealed or passed through openings in the structure, are covered under Incandescent Surface-mounted Luminaires (IEZR) or Fluorescent Surface-mounted Luminaires (IEUZ) for surface mounting, or Incandescent Recessed Luminaires (IEZX) or Fluorescent Recessed Luminaires (IEVV) for recessed mounting.

Low-voltage lighting systems intended for installation in accordance with Article 411 of the NEC in permanently installed cabinets, having a remote power source connected to a fixed wiring means, are covered under Low-voltage Incandescent Luminaires and Fittings (IFDR).

Portable cabinet luminaires investigated for use with specific cabinet or display designs are certified together with the cabinet or display as Furnishings, Household and Commercial (IYQX).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

Products employing LED light sources are additionally investigated to ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Cabinet Luminaire," "Portable Cabinet Light" or "Portable Cabinet Luminaire Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIGHT-EMITTING-DIODE LUMINAIRES, PORTABLE (QOVZ)

GENERAL

This category covers portable light-emitting-diode (LED) luminaires whose primary function is task or ambient illumination. These products are provided with a flexible cord and an attachment plug for connection to a nominal 120 V, 15 or 20 A branch circuit and intended for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers low-voltage LED lighting systems intended for installation under a shelf, cabinet, or similar structural surface, in accordance with Article 411 of the NEC, where the power supply is of the attachment-plug equipped, cord-connected type, or is a direct-plug-in type.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain

Light-emitting-diode Luminaires, Portable (QOVZ)—Continued

types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

PRODUCT MARKINGS

Products investigated as Convertible Units are marked to indicate acceptability as a LED luminaire when used with the appropriate conversion kit.

Products investigated for use in wet locations are marked, in combination with the UL Certification Mark, "SUITABLE FOR WET LOCATIONS."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Portable LED Luminaire
- Portable Light-emitting-diode Luminaire

RELATED PRODUCTS

Portable electric hand lamps are covered under Portable Electric Hand Lamps (QORX).

Nightlights are covered under Nightlights (QOYX).

Portable LED luminaires that comply with the requirements in ANSI/UL 48, "Electric Signs," may also be certified as Signs (UXYT).

Unassembled portable luminaires are covered under Portable Luminaire Accessories, Kits and Subassemblies (QPAU).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 153, "Portable Electric Luminaires," and ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Light-emitting-diode Luminaire" (or "Portable LED Luminaire").

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRES, PORTABLE (QOWZ)

GENERAL

This category covers portable luminaires (lamps) whose primary function is task or ambient illumination. These products are provided with a flexible cord and an attachment plug for connection to a nominal 120 V, 15 or 20 A branch circuit and intended for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers low-voltage lighting systems intended for installation under a shelf, cabinet, or similar structural surface, in accordance with Article 411 of the NEC, where the power supply is of the attachment-plug-equipped, cord-connected type, or is a direct-plug-in type.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

PRODUCT MARKINGS

Products investigated as Convertible Units are marked to indicate acceptability as a luminaire when used with the appropriate conversion kit.

Products investigated for use in wet locations are marked, in combination with the UL Certification Mark, "Suitable for Wet Locations."

REBUILT PRODUCTS

This category also covers portable luminaires that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt portable luminaires

Luminaires, Portable (QOWZ)—Continued

are factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt portable luminaires are subject to the same requirements as new portable luminaires.

PRODUCT IDENTITY

The following product identity appears on the product:

Portable Luminaire

For rebuilt products, the word "Rebuilt" precedes the product identity.

RELATED PRODUCTS

Portable luminaires that comply with the requirements in ANSI/UL 48, "Electric Signs," may also be certified as Signs (UXYT).

Unassembled portable luminaires are covered under Portable Luminaire Accessories, Kits and Subassemblies (QPAU).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

Products employing LED light sources are additionally investigated to ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Luminaire" or "Rebuilt Portable Luminaire."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NIGHTLIGHTS (QOYX)

USE

This category covers nightlights for direct-plug-in use in parallel-slot, general-purpose receptacles rated 15 or 20 A, 125 V.

PRODUCT IDENTITY

The following product identity appears on the product:

Nightlight

RELATED PRODUCTS

Nightlights employing light-emitting-diode (LED) light sources may additionally be covered under Light-emitting-diode Nightlights (QOWC).

Lighting products intended for use as nightlights, but provided with a power-supply cord, are covered under Luminaires, Portable (QOWZ).

Parallel-blade-to-incandescent-lamp adapters are covered under Lampholders, Adapters (OLRX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1786, "Direct Plug-In Nightlights."

Products employing LED light sources are additionally investigated to ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

Nightlights (QOYX)—Continued

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nightlight."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PORTABLE LUMINAIRE ACCESSORIES,
KITS AND SUBASSEMBLIES (QPAU)****USE AND INSTALLATION**

This category covers portable luminaire accessories, kits and subassemblies of the following types:

Portable Luminaire Accessory — The portable luminaire accessory is intended to be used with a portable luminaire and consists of components such as interconnecting cord sets, dimmer and switch assemblies, and conversion kits to enable the portable luminaire to be converted to a fixed unit (luminaire) in accordance with ANSI/UL 1598, "Luminaires."

Portable Luminaire Kit — The portable luminaire kit is intended to be used for making a complete portable luminaire using ordinary tools to assemble and/or attach the parts to a support base in accordance with the instructions provided with the kit. All parts needed to assemble the product in accordance with the instructions are provided.

Portable Luminaire Subassembly — The portable luminaire subassembly is intended to be used for modernizing, or replacing parts on existing luminaires in accordance with the instructions provided with the subassembly. It may also be used for constructing a new portable luminaire in accordance with the instructions provided with the subassembly. All electrical components needed to assemble the product in accordance with the instructions are provided.

MARKINGS AND INSTRUCTIONS

Portable luminaire accessory conversion kits are provided with mounting and installation instructions and markings to indicate that they are capable of being used as fixed units (luminaires) when used with the appropriate portable luminaires. The portable luminaires are identified by catalog or model number.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Portable Lamp Subassembly
- Portable Luminaire Accessory
- Portable Luminaire Kit
- Portable Luminaire Subassembly

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

Portable luminaire accessory conversion kits and their associated portable luminaires are additionally investigated to ANSI/UL 1598, "Luminaires."

Products employing LED light sources are additionally investigated to ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark**UL MARK**

The Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Portable Luminaire Accessory," "Portable Luminaire Kit," "Portable Lamp Subassembly" or "Portable Luminaire Subassembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

Portable Luminaire Accessories, Kits and Subassemblies
(QPAU)—Continued

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE WORK LIGHTS (QPCJ)**USE AND INSTALLATION**

This category covers cord-and-plug-connected work lights for illumination of work areas, such as construction sites, loading docks and machinery work stations. Work lights are not intended to be hand held during use. Work lights are not intended for use in hazardous (classified) locations as defined in ANSI/NFPA 70, "National Electrical Code."

This category also covers work light accessories intended for use with specific work lights.

Work lights may be freestanding, clamp-on, or similar portable mounting means, or be provided with a means for mounting to a tool, machine or a similar movable object.

Work lights may be placed on combustible floors. Special care must be employed to avoid overturning and to keep away from draperies, furniture, etc.

PRODUCT MARKINGS

A work light marked "Dry Location Use" is intended to be used only in a dry location.

A work light marked "Suitable for Wet Location Use" is intended for use in a wet or dry location.

A work light marked "Suitable for Outdoor Use Only" is suitable for use in a wet location and is intended to be used only in an outdoor location.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Portable Work Light
- Work Light
- Work Light Accessory

RELATED PRODUCTS

Portable outdoor flood lights for illumination or landscape, outdoor decorations, patios and play areas are covered under Luminaires, Portable (QOWZ).

For other portable lighting products, see Luminaires, Portable (QOWZ) and Portable Electric Hand Lamps (QORX).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

Products employing LED light sources are additionally investigated to ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Work Light," "Portable Work Light" or "Work Light Accessory."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SUN AND HEAT LAMPS (QPDY)**USE**

This category covers portable sun and heat lamps of the household variety intended for the production of ultraviolet (sun) radiation, infrared (heat) radiation, or both.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, which may be produced by these lamps have not been investigated.

PORTABLE LIGHTING PRODUCTS (QOTU)

Sun and Heat Lamps (QPDY)—Continued

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Heat Lamp
- Infrared Lamp
- Sun Lamp
- Ultraviolet Lamp

RELATED PRODUCTS

Sun and heat lamps intended for professional use are covered under Medical Equipment (PIDF).

Sun and heat equipment for household and commercial use is covered under Personal Sun and Heat Equipment (QGRX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 482, "Portable Sun/Heat Lamps." The limit for ultraviolet irradiation specified in ANSI/UL 482 is in agreement with the federal regulations specified in 21CFR1040.20, "Sun Lamp Products and Ultraviolet Lamps Intended for Use in Sun Lamp Products."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Infrared Lamp," "Ultra-Violet Lamp," "Heat Lamp" or "Sun Lamp."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE LUMINAIRES FOR USE IN HAZARDOUS LOCATIONS (QPKX)

GENERAL

This category covers portable luminaires (lighting units). Portable luminaires have provision for connection of a three-conductor, flexible, extra-hard-usage cord having a grounding conductor, and are provided with a seal between the lamp compartment and the terminal enclosure.

Connections to the fixed portion of the supply require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, certified for the specified hazardous locations. The flexible cord connected to the units should be frequently examined and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Portable Lighting Unit for Use in Hazardous Locations
- Portable Luminaire for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AALZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 844, "Luminaires for Use in Hazardous (Classified) Locations."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

PORTABLE LUMINAIRES FOR USE IN HAZARDOUS LOCATIONS (QPKX)

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Lighting Unit for Hazardous Locations" or "Portable Luminaire for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE AND POWER FEEDER CABLE FOR USE IN MINES AND SIMILAR APPLICATIONS (QPMP)

USE

This category covers portable and power feeder cable used for the utilization of electrical energy in surface and underground mines and similar applications. Portable and power feeder cable consists of either a single insulated conductor with no jacket, or two or more insulated conductors, with or without grounding conductors, with an overall jacket. The insulation and jacket are both thermoset, except for Types MP and MP-GC, which employ a thermoset insulation and a thermoplastic or thermoset jacket. Insulation may be applied in one or two layers.

Types SH, SHD, SHD-GC and SHD-CGC are intended for use in mining machines, dredges, shovels and similar applications.

Types MP and MP-GC are intended for use as connections between units of mine distribution systems.

CABLE TYPES

Type SH — A round, insulated, shielded, and jacketed single-conductor cable. The conductors are sized 6 AWG to 500 kcmil, and the cable is rated 2 to 25 kV, 90°C (194°F) dry, 75°C (167°F) wet, and 60°C (140°F) where exposed to oil.

Type SHD — A round cable with three individually shielded power conductors and three grounding conductors located in the interstices, and an overall jacket. The conductors are sized 6 AWG to 500 kcmil, and the cable is rated 2 to 25 kV, 90°C (194°F) dry, 75°C (167°F) wet, and 60°C (140°F) where exposed to oil.

Type SHD-GC — A round cable with three insulated conductors, two uninsulated grounding conductors, a ground-check conductor, and an overall jacket. The conductors are sized 6 AWG to 500 kcmil, and the cable is rated 2 to 25 kV, 90°C (194°F) dry, 75°C (167°F) wet, and 60°C (140°F) where exposed to oil.

Type SHD-CGC — A round cable with three insulated conductors, two uninsulated grounding conductors, a ground-check conductor in the center, and an overall jacket. The conductors are sized 6 AWG to 500 kcmil, and the cable is rated 2 to 25 kV, 90°C (194°F) dry, 75°C (167°F) wet, and 60°C (140°F) where exposed to oil.

Type MP — A round cable with three insulated, shielded conductors and three bare bonding conductors with conductors sized 6 AWG to 500 kcmil, rated 2 to 25 kV, 90°C (194°F) dry, 75°C (167°F) wet, and 60°C (140°F) where exposed to oil.

Type MP-GC — A round cable with three insulated, shielded conductors, two bare bonding conductors, one ground-check conductor with conductors sized 6 AWG to 500 kcmil, rated 2 to 25 kV, 90°C (194°F) dry, 75°C (167°F) wet, and 60°C (140°F) where exposed to oil.

PRODUCT MARKINGS

The type and ratings are identified by tag markings and by printing on the surface of the insulation.

PRODUCT IDENTITY

The following product identity appears on the product:
Portable and Power Feeder Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NEMA WC 58 (2008), "Portable and Power Feeder Cables for Use in Mines and Similar Applications."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

PRODUCT CATEGORIES BY CATEGORY CODE

PORTABLE AND POWER FEEDER CABLE FOR USE IN MINES AND SIMILAR APPLICATIONS (QPMP)
436

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE POWER CABLE (QPMU)

GENERAL

This category covers portable power cable constructed and certified for use in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). Portable power cable consists of either a single insulated conductor or two or more insulated conductors, with or without grounding conductors, with an overall fiber reinforced jacket. The insulation and jacket are thermoset on Types G, G-GC and W, and thermoplastic elastomer on Type PPE.

This cable is used to supply power to mobile equipment and machinery and is rated 2000 V, 75°C (167°F) or 90°C (194°F) dry, and 60°C (140°F) or 75°C (167°F) where exposed to oil. For cable so marked, ratings of 60°C (140°F), 75°C (167°F), or 90°C (194°F) "wet" are also assigned. The term "wet" indicates that the cable is acceptable for immersion in water. Cable that has been investigated for use where exposed to the direct rays of the sun is marked "Sunlight Resistant" or "Sun Res."

Portable power cable employs flexible stranded copper conductors in a size range of 12 AWG to 500 kcmil, except for single conductor Type W and single conductor Type PPE which employs flexible stranded copper conductors in sizes 12 AWG to 1000 kcmil. Ampacities for portable power cable can be found in Table 400.5(B) of the NEC.

Type G — Contains 2 – 6 circuit conductors and a grounding conductor. The grounding conductor is either bare or covered with a green-colored braid or tape, and may either be a single conductor or be sectioned into two or more parts.

Type G-GC — Same as Type G except that the cable also contains one, 12 AWG or larger, yellow insulated conductor which is used as a ground check.

Type W — Contains 1 – 6 circuit conductors and may or may not contain a grounding conductor. If included, the grounding conductor is fully insulated.

Type PPE — Contains 1 – 6 circuit conductors and may or may not contain a grounding conductor. If included, the grounding conductor is fully insulated.

PRODUCT IDENTITY

The following product identity appears on the product:
Portable Power Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1650, "Outline of Investigation for Portable Power Cable."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Power Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER AND CONTROL TRAY CABLE FOR SOLAR TRACKERS (QPNY)

GENERAL

This category covers power and control cable intended for use with solar tracking devices. The cable consists of two or more insulated conductors,

POWER AND CONTROL TRAY CABLE FOR SOLAR TRACKERS (QPNY)

with or without one or more grounding conductors covered with a nonmetallic jacket. The cable is rated 60, 75, 90 or 105°C (140, 167, 194 or 221°F) and 300 V. The cable is suitable for installation in dry and wet locations, where directly buried, and exposed to sunlight.

The minimum conductor size is 24 AWG copper. Conductor sizes within a cable may be mixed.

PRODUCT MARKINGS

The marking on the surface of the cable consists of:

- a) Identification of the organization responsible for the product
- b) Catalog number of cable
- c) Number and AWG or kcmil (mm²) size of conductors
- d) Dry and wet temperature ratings (for example, 90°C dry, 75°C wet)
- e) Voltage rating
- f) Flame rating
- g) Low-temperature rating, if less than minus 20°C

The marking on the tag, reel or spool consists of:

- a) Identification of the organization responsible for the product
- b) Catalog number of cable
- c) Number and AWG or kcmil (mm²) size of conductors
- d) Dry and wet temperature ratings (for example, 90°C dry, 75°C wet)
- e) Voltage rating
- f) Flame rating
- g) Low-temperature rating, if less than minus 20°C
- h) Date of manufacture by month and year

PRODUCT IDENTITY

The following product identity appears on the product:
Power and Control Cable for Solar Trackers

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 2903, "Outline of Investigation for Solar Tracker Power and Control Cable."

UL MARK

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER AND CONTROL TRAY CABLE (QPOR)

GENERAL

This category covers Type TC power and control tray cable intended for use in accordance with Article 336 of ANSI/NFPA 70, "National Electrical Code" (NEC). The cable consists of one or more pairs of thermocouple extension wires or two or more insulated conductors, with or without one or more grounding conductors, with or without one or more optical fiber members and covered with a nonmetallic jacket. A single grounding conductor may be insulated or bare and may be sectioned. Any additional grounding conductor is fully insulated and has a distinctive surface marking. The cable is rated 600 or 2000 V.

The cable is certified in conductor sizes 18 AWG to 1000 kcmil copper or 12 AWG to 1000 kcmil aluminum or copper-clad aluminum. Conductor sizes within a cable may be mixed. Thermocouple extension conductors are certified in sizes 24 to 12 AWG.

PRODUCT MARKINGS

Cable with copper-clad aluminum conductors is surfaced printed "AL (CU-CLAD)" or "Cu-clad Al."

Cable with aluminum conductors is surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors." For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

If the type designation of the conductors is marked on the outside surface of the cable, the temperature rating of the cable corresponds to the rating of the individual conductors. When this marking does not appear, the temperature rating of the cable is 60°C unless otherwise marked on the surface of the cable.

POWER AND CONTROL TRAY CABLE (QPOR)

Cable investigated for use where exposed to direct rays of the sun is marked "sunlight resistant."
 Cable investigated for direct burial in the earth is so identified.
 Cable suitable for use between cable trays and utilization equipment in accordance with NEC 336.10(7) is surface marked with the suffix "-ER."
 Cable consisting of thermocouple extension wires is surface marked "THCPL EXTN," "For thermocouple extension use only" or "Thermocouple extension wire only."
 Cable surface marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is surface marked "Oil Resistant II" (or "Oil Res II").
 Cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked with the suffix "-LS."
 Cable containing optical fiber members is identified with the suffix "-OF."
 Regarding cable seals outlined in Article 501 of the NEC, Type TC cable has a sheath which is considered to be gas/vapor tight but the cable has not been investigated for transmission of gases or vapors through its core.

RELATED PRODUCTS

Connectors and fittings for use with this cable are covered under Power and Control Tray Cable Connectors (QPOZ).
 Some connectors and fittings covered under Outlet Bushings and Fittings (QCRV), Nonmetallic-sheathed-cable Connectors (PXJV) and Service-entrance-cable Fittings (TYZX) are also suitable for use with this cable when specifically marked on the device or carton.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Aluminum Power and Control Tray Cable Type TC (for power and control tray cable that contains aluminum conductors)
 Power and Control Tray Cable Type TC (for power and control tray cable that contains copper or copper-clad aluminum conductors)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1277, "Electrical Power and Control Tray Cables with Optional Optical-Fiber Members."

UL MARK

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
 UL MARK**

The Listing Mark of UL on the attached tag, the reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Power and control tray cable that contains copper or copper-clad aluminum conductors has the product name "Power and Control Tray Cable Type TC"; power and control tray cable that contains aluminum conductors has the product name "Aluminum Power and Control Tray Cable Type TC."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER AND CONTROL TRAY CABLE CONNECTORS (QPOZ)

USE

This category covers power and control tray cable connectors intended for use with Type TC cable. These connectors are intended for installation and use in accordance with the following information and the limitations specified in Power and Control Tray Cable (QPOR).

All male threaded fittings have only been investigated for use with lock-nuts.

Reusability — Connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

PRODUCT MARKINGS

POWER AND CONTROL TRAY CABLE CONNECTORS (QPOZ) 437

The connector or smallest unit shipping carton for the connectors is marked with the smallest and largest cable diameters for which the connectors have been investigated. In addition, the connectors or cartons are marked "Dry Location," "Sunlight Resistant," "Oil Resistant I" or "Oil Resistant II." Cable connectors marked "Oil Resistant I" are suitable for exposure to mineral oil at 60°C. Cable connectors marked "Oil Resistant II" are suitable for exposure to mineral oil at 75°C.

Some connectors are also acceptable for use with armored cable, flexible metal conduit, nonmetallic-sheathed cable, cord or service-entrance cable when marked on the device or carton.

PRODUCT IDENTITY

The following product identity appears on the product:
 Tray Cable Connector

ADDITIONAL INFORMATION

For additional information, see Power and Control Tray Cable (QPOR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings." Products not identified with a specific standard reference are investigated to the 6th ed. (issued July 13, 2012; last revised June 4, 2014). All other products are identified by the specific standard/edition/date in the individual certifications.

UL MARK

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Tray Cable Connector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER CONVERTERS/INVERTERS AND POWER CONVERTER/INVERTER SYSTEMS (QPPY)

USE AND INSTALLATION

This category covers (1) fixed and stationary power converters, power inverters, power converter systems and power inverter systems for use in recreational vehicles in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), (2) portable, stationary and fixed power converters, power inverters, power converter systems and power inverter systems for use in land vehicles, and (3) accessories for power converters and power inverters.

Power converters are primarily rectifying units intended for connection to a 120 V or 120/240 V, 15 or 20 A branch circuit supplied from the recreational vehicle panelboard and designed to provide low direct voltage for equipment in the recreational vehicle. A power converter may also include a battery charging feature.

Power inverters are intended for connection to a battery source within a land vehicle. They are designed to supply ac voltage for equipment in a land vehicle. A power inverter may be provided with an ac transfer option to supply the output from an ac distribution system when the inverter is connected to such a system. A power inverter may also include a battery charger feature.

Power converter systems consist of a power converter and not more than three integral line voltage branch circuit protective devices unless marked "Distribution Panelboard." Power inverter systems consist of a power inverter and not more than three integral line voltage branch circuit protective devices unless marked "Distribution Panelboard." A main disconnecting means is provided if more than two branch circuit protective devices are incorporated.

A power converter system or power inverter system may serve the function of a distribution panelboard in a land vehicle. They are intended to be connected directly to an ac distribution system by means of a power-supply cord.

PRODUCT CATEGORIES BY CATEGORY CODE

POWER CONVERTERS/INVERTERS AND POWER CONVERTER/INVERTER SYSTEMS (QPPY)

DISTRIBUTION PANELBOARDS

Some certified power converter systems or power inverter systems consist of a line voltage branch circuit section with more than three integral line voltage branch circuit protective devices. The line voltage compartment, including the overall enclosure for that compartment, complies with ANSI/UL 67, "Panelboards," and is intended to be installed in accordance with Article 551 of the NEC. Such power converter or inverter systems are identified as a "Distribution Panelboard" or the equivalent.

REBUILT PRODUCTS

This category also covers units that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt units are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt units are subject to the same requirements as new products.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Power Converter
- Power Converter System
- Power Inverter
- Power Inverter System

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Land vehicle main distribution centers without integral power converter/inverter functions are covered under Panelboards (QEUY).

Power converters, power inverters, power converter systems and power inverter systems for use on a marine craft are covered under Power Converters/Inverters and Power Converter/Inverter Systems, Marine (QPQL).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 458, "Power Converters/Inverters and Power Converter/Inverter Systems for Land Vehicles and Marine Crafts."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Power Converter," "Power Inverter," "Power Converter System," "Power Inverter System," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER DISTRIBUTION BLOCKS (QPQS)

USE

This category covers power distribution blocks rated 1000 V or less and intended to be used on the line or load side of service equipment.

Power distribution blocks are used for splicing and tapping conductors in metallic wireways, auxiliary gutters, cabinets, cutout boxes, termination boxes, and the like, or enclosures designed for the purpose in order to distribute power to separate circuits or loads.

A power distribution block consists of one or more terminal wire connectors mounted on an insulating base. Each connector has provisions for one or more incoming run conductors and multiple tap conductors. A tap conductor is of the same or smaller size as the incoming run conductor. The connectors may be of the lay-in construction, which do not require the incoming run conductor to be terminated.

A power distribution block may be provided with an insulating cover.

INSTALLATION

Power distribution blocks are intended for use in installations covered by ANSI/NFPA 70, "National Electrical Code" (NEC), and installed using the

POWER DISTRIBUTION BLOCKS (QPQS)

manufacturer's installation instructions. Wiring space (75% cross-sectional fill), wire bending space, and final exposure of any uninsulated live parts are determined by the installer and Authority Having Jurisdiction at each installation in accordance with Sections 314.28(E) and 376.56(B) of the NEC when the power distribution block is installed in the enclosure.

Power distribution blocks provided with an insulating cover have been investigated for nonexposure of uninsulated live parts in a wireway, whether or not the wireway cover is installed.

Power distribution blocks marked "Suitable for Use on the Line Side of Service Equipment" (or equivalent) have been investigated for use on either the line side or the load side of service equipment.

Installation instructions are provided for proper mounting and use.

PRODUCT MARKINGS AND RATINGS

Power distribution blocks are considered suitable for use on circuits having available fault current not greater than 10,000 rms symmetrical amps, unless marked with a larger value. Power distribution blocks are marked "Short-Circuit Current Rating" together with the value of the rating and the maximum voltage. A power distribution block only intended for use on the load side of service equipment may additionally be marked to identify an overcurrent protective device (fuse or circuit breaker) to be used ahead of the power distribution block.

Power distribution blocks are marked to indicate that they are for use in specific enclosures (identified by either catalog number or specific dimensional information).

Unless the power distribution block is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.15(B)(16) of the NEC. Termination provisions are determined based on values provided in Table 310.15(B)(16) or Section 310.15(B)(7), with no adjustment made for correction factors.

Power distribution blocks are additionally marked with the following:

- a) the letters "AL" to indicate use with aluminum conductors only; "CU" to indicate for use with copper conductors only; or "CU" and "AL" to indicate for use with either type of conductor
- b) a "7" or "9" in conjunction with the "AL" or "AL-CU" marking. This marking corresponds with the marking on the individual connector (e.g., AL7CU, AL9)
- c) the torque associated with each conductor tightening means
- d) an ampere rating that signifies the maximum current per pole
- e) a voltage rating
- f) the wire size (or range) for each connector

An insulating cover of a power distribution block is marked with the catalog number of the of the power distribution block for which it is intended.

PRODUCT IDENTITY

The following product identity appears on the product:

Power Distribution Block

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1953, "Outline of Investigation for Power Distribution Blocks."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Distribution Block."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER DISTRIBUTION CENTERS FOR COMMUNICATIONS EQUIPMENT (QPQY)

GENERAL

POWER DISTRIBUTION CENTERS FOR COMMUNICATIONS
EQUIPMENT (QPQY)

This category covers power distribution centers for communications equipment rated 600 V or less.

Power distribution centers contain equipment such as circuit breakers, supplementary protectors, contactors, fuses, switches, including pullout types and related accessory equipment.

Some centers incorporate constructions designed to provide safety for the operator. These centers are dead-front but may be open at the back, bottom, top or sides. Other centers may employ special alarm indicating fuses that have exposed live parts extending through the front. The distribution centers that incorporate special alarm fuses or that are not provided with a complete enclosure are intended for installation in places accessible only to qualified persons and are so marked.

INSTALLATION

Some equipment has been investigated for installation in a restricted-access location, such as a dedicated equipment room or telecommunications equipment closet, where access is limited to trained service personnel. Such equipment is provided with a marking or installation instructions, stating "To be installed only in a Restricted Access Location," or similar wording. Equipment installed in a restricted-access location generally receives power from a centralized dc power source. If field-wiring terminals are not contained in an internal compartment, both protection of exposed wiring terminals and wiring methods used for such equipment are intended to be provided in accordance with (1) markings on or instructions with the equipment, and (2) the provisions of Sections 110.26 and 110.27 of ANSI/NFPA 70, "National Electrical Code" (NEC).

A certified subassembly such as a fuse panel, circuit breaker panel or the like has been investigated for use in a power distribution center or cabinet and is suitable for field installation. The subassembly is installed in accordance with the manufacturer's installation instructions, and the catalog number or equivalent of the subassembly and power distribution center or cabinet is referenced in the instructions.

PRODUCT MARKINGS

Power distribution centers are marked with their short circuit current rating. This marking may be presented as a dc rating in amps, a description of the battery power supply, such as "Suitable For Use In Circuits Powered By Up To Five Banks Of 48 V, 200 A-Hr. Batteries," or a combination of both. A battery "bank" consists of a sufficient number of series-connected batteries to obtain the required system voltage. A number of "banks" are then wired in parallel to obtain the desired system A-Hr. capacity.

A distribution center having provision for the field installation of additional equipment such as circuit breakers, contactors, switches or the like is marked with the name or trademark of the manufacturer and the catalog number or equivalent of those devices that are intended to be installed in the field.

Power distribution centers are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.15(B)(16) of the NEC.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Power Distribution Center for Communications Equipment
- Power Distribution Center for Communications Equipment Subassembly

RELATED EQUIPMENT

Power supplies for information technology and telecommunications equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ) and Power Supplies, Telephone (QQJE).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 60950, "Safety of Information Technology Equipment," or ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements" (1st edition), in addition to the requirements contained in UL Subject 1801, "Outline of Investigation for Power Distribution Centers for Communications Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

POWER DISTRIBUTION CENTERS FOR COMMUNICATIONS
EQUIPMENT (QPQY)

439

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Distribution Center for Communications Equipment" or "Power Distribution Center for Communications Equipment Subassembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWER-DISTRIBUTION EQUIPMENT,
PORTABLE (QPRW)****USE**

This category covers portable power-distribution units and devices, and portable power-distribution panels intended for use in the following locations:

- Carnivals, circuses, fairs and similar locations in accordance with Article 525 of ANSI/NFPA 70, "National Electrical Code" (NEC)
- Exhibition halls or similar locations in accordance with Article 518 of the NEC
- Theaters, audience areas of motion picture and television studios and similar locations in accordance with Article 520 of the NEC
- Motion picture and television studios and similar locations in accordance with Article 530 of the NEC
- Temporary installations at construction sites in accordance with Article 590 of the NEC

RATINGS

This category covers units rated 600 V or less, single- or multi-phase. Units are rated maximum 1600 A.

Short-circuit Rating — Units are intended for connection to supplies with a maximum available fault current of 10,000 A.

PRODUCT MARKINGS

Accessibility — Units intended for use in areas not accessible by the general public are marked "For Use in Areas Not Readily Accessible by the General Public."

Conductors in Parallel — Units intended for paralleled conductors on a single circuit are marked "WARNING – Risk of Fire – Not for Multiple Circuits. Single Circuit with Parallel Conductors Only."

Duty Rating — Outputs are not suitable for continuous use unless marked otherwise.

Ground-fault Protection — Only those receptacles so marked are provided with ground-fault circuit protection for personnel.

Neutral Connection — Equipment rated for use on 3-phase, 4-wire with ground supplies and intended for use with electronic dimmers are marked "130 Percent Neutral – Suitable for Use with Electronic Dimmers." Equipment for use on both 208Y-/120-volt, 3-phase, 4-wire and 120-/240-volt, single-phase supplies at the full current rating on both systems are marked "200 Percent Neutral."

Qualified Personnel — Units intended for use by qualified personnel are marked "FOR USE BY QUALIFIED PERSONNEL ONLY" and "The routing of portable supply conductors, the making and breaking of supply connectors, and the energization and de-energization of supply services shall be performed by qualified personnel only."

Enclosure Type — Enclosures are marked with a Type designation indicating the external conditions for which they are intended. Intended uses for the various Type designations are indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). Enclosures may additionally be marked with descriptive terms such as "Raintight," "Watertight," "Corrosion Resistant" and the like.

Receptacle Ratings — Equipment with receptacles that are not suitable to be disconnected under load are marked "Do Not Disconnect Under Load," or other similar marking to indicate the limitation of the receptacle.

Single-pole Inlets and Outlets — Equipment with separate, single-pole devices for input or output and without sequential interlocking provisions are marked "WARNING — Risk of Electric Shock. Plug connection should be in the following order:

- a) Equipment grounding conductor connectors,
- b) Grounded circuit conductor connectors, and
- c) Ungrounded conductor connectors.

Disconnection should be in reverse order."

RELATED PRODUCTS

Units intended for use in theater or studio rigging immediately adjacent to stage luminaires are covered under Stage and Studio Luminaires, Accessories and Connector Strips (IFDZ).

Portable cord-connected units rated 250 V ac or less, 20 A or less, intended for indoor use as multiple-outlet extensions of a branch circuit to a central location to supply laboratory equipment, a home workshop, home movie lighting control, etc., are covered under Relocatable Power Taps (XBYS).

Connector assemblies consisting of only factory-assembled plugs and cord connectors attached to extra-hard service cords or cables are covered under Cord Sets and Power-supply Cords (ELBZ).

Connector assemblies consisting of only factory-assembled plugs and cord connectors attached to extra-hard service cords or cables that are intended specifically and solely for undercarpet use at tradeshow are covered as undercarpet cord sets under Exhibition Display Units, Accessories (XNRU).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE POWER-DISTRIBUTION UNITS AND DEVICES (QPSH)

GENERAL

This category covers portable power-distribution equipment of standardized type or configuration. Each unit has a marked model, type or catalog number.

Portable power-distribution units are assemblies of certified products or components, or both, contained in complete electrical enclosures. They may incorporate disconnecting means, overcurrent devices, control components, receptacles for attachment plugs, stage- and studio-type inlets and connectors, and the like.

This category also covers cable-mounted busbar clamps for use with portable power-distribution units as well as partially enclosed, plastic-framed cable-splicing blocks.

Busbar Clamps (Sister Lugs)

Busbar clamps are intended for use by qualified personnel only. Cable terminating to busbar clamps should be tied or otherwise supported so that flexing or strain on the conductors is not transmitted to the conductor termination at the busbar clamp. Soldering-lug-type units are not suitable to terminate an equipment-grounding conductor. Busbar clamps are marked with their range of intended wire sizes and their maximum current rating.

Cable-splicing Blocks (Spiders)

Partially enclosed, plastic-framed cable-splicing blocks are suitable for outdoor use, damp locations. They are suitable to be exposed to rain or water spray when not energized. Following such an exposure they are intended to be dried and inspected prior to energization. They are intended for use by qualified personnel in areas not readily accessible by the general public. They are intended for installations covered by Articles 520 and 530 of ANSI/NFPA 70, "National Electrical Code."

Construction-site Units

Units identified as "Construction-site Portable Power-distribution Units" or with similar identifiers that are marked as providing ground-fault protection for personnel protect the output circuits in the presence of one or more of the following conditions:

1. Any two power-supply conductors are reversed
2. There is an open circuit in either the grounded supply conductor or any of the ungrounded supply conductors

Protection is provided by exhibiting the performance characteristics of a Class A ground-fault circuit interrupter or by de-energizing the protected output circuits.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Busbar Clamp
 Construction-site Port Pwr-dist Unit
 Construction-site Portable Power-distribution Unit
 Open-frame Cable-splicing Block (for partially enclosed, plastic-framed cable-splicing blocks)
 Port Pwr-dist Unit
 Portable Power-distribution Unit
 The word "Equipment" may be substituted for "Unit."

ADDITIONAL INFORMATION

For additional information, see Power-distribution Equipment, Portable (QPRW) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1640, "Portable Power-Distribution Equipment."

Products not identified with a specific standard reference are investigated to UL 1640 (2nd ed., issued July 6, 2000; last revised January 15, 2010). All other products are identified by the specific standard/edition/date in the individual certifications.

UL MARK

Portable Power-distribution Units and Devices (QPSH)—Continued

For portable power-distribution units and partially enclosed, plastic-framed cable-splicing blocks:

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

For busbar clamps:

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify portable power-distribution units manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Power Distribution Unit" (or "Port Pwr Dist Unit") or "Construction Site Portable Power Distribution Unit" (or "Construction Site Port Pwr Dist Unit"). The word "Equipment" may be substituted for "Unit."

The Listing Mark for partially enclosed, plastic-framed cable-splicing blocks is the same as that specified above except the product name is "Open Frame Cable Splicing Block."

The Listing Mark of UL on the smallest unit container in which busbar clamps are packaged and additionally provided with the UL symbol on the busbar clamp is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Busbar Clamp."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE POWER-DISTRIBUTION PANELS (QPSM)

USE

This category covers portable power distribution panels built for specific applications.

These products are assemblies of certified products and/or components, contained in complete electrical enclosures. They may incorporate disconnecting means, overcurrent devices, receptacles for attachment plugs, stage and studio type inlets and connectors, and the like.

These panels are intended for use in applications specified for portable power distribution units in ANSI/NFPA 70, "National Electrical Code."

PRODUCT IDENTITY

The following product identity appears on the product:
 Portable Power Distribution Panel

ADDITIONAL INFORMATION

For additional information, see Power Distribution Equipment, Portable (QPRW) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1640, "Portable Power-Distribution Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER-LIMITED CIRCUIT CABLE (QPTZ)

USE

This category covers power-limited circuit cable intended for use in Class 2 or Class 3 circuits as described in Article 725 of ANSI/NFPA 70, "National Electrical Code" (NEC).

PRODUCT MARKINGS

Cable with a nonmetallic jacket is identified by a marking on the surface of the jacket or on a marker tape under the jacket. Cable with an outer metal sheath is identified by a marker tape under the armor. This marking includes one of the following Type designations:

CL2P or CL3P — Indicates cable intended for use in Class 2 or Class 3 circuits within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 725.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

CL2R or CL3R — Indicates cable intended for use in Class 2 or Class 3 circuits within buildings in vertical shafts in accordance with Section 725.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

CL2 or CL3 — Indicates cable intended for general use in Class 2 or Class 3 circuits within buildings in accordance with Section 725.154(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

CL2X or CL3X — Indicates cable intended for use in Class 2 or Class 3 circuits within buildings (1) where the cable is enclosed in raceway or noncombustible tubing, or (2) in nonconcealed spaces where the exposed length of cable does not exceed 10 ft, or (3) in one- or two-family or multi-family dwellings when the cable diameter is less than 0.25 in., in accordance with Section 725.154(E) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581.

PLTC — Indicates cable for use in Class 3 circuits within buildings that is suitable for use in cable trays, in accordance with Sections 725.154(C) and (D) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1685.

Cable marked "direct burial," "for direct burial" or "dir bur" is suitable for direct burial in the earth.

Type PLTC cable and cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

Cable marked "wet" or "wet location" is suitable for use in wet locations.

Cable marked "-30C," "-40C," "-50C," "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

Type PLTC cable permitted to be exposed between cable trays and utilization equipment in accordance with Section 725.61(D)(4) of the NEC is surface marked with the supplementary letters "ER" (formerly marked "open wiring").

Cable marked "-CI (max voltage ____)" is suitable for use as circuit-integrity cable at the maximum voltage to ground indicated, in accordance with Section 725.179(F) of the NEC.

Cable marked "CI (max voltage ____)" is intended for use in free air only.

PRODUCT IDENTITY

The following product identity appears on the product:

Power-limited Circuit Cable

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 13, "Power-Limited Circuit Cables."

UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Cable certified to another transmission performance specification has the marking "Certified in Accordance with [Specification name and/or number]" together with the Certification Mark information on the tag, reel or smallest unit container.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power-limited Circuit Cable."

Cable verified to another transmission performance specification has the Marking "Verified In Accordance With [Specification name and/or number]" together with the Listing Mark information on the tag, reel or smallest unit container.

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER OUTLETS AND POWER- OUTLET FITTINGS (QPYY)

GENERAL

This category covers power outlets and power-outlet fittings.

Power outlets are enclosed assemblies that may include components such as receptacles, circuit breakers, fuseholders, fused switches, buses, and watt-hour meter-mounting means. Power outlets are permanently installed and, although not restricted to such use, are intended for use:

- At outdoor locations, such as on farms, at building sites, and the like, where power is required to operate portable, mobile, or temporarily installed equipment
- To supply power to a mobile home or a recreational vehicle
- To supply shore power to boats

Power-outlet fittings may be panels or combination units incorporating receptacles, disconnecting means, overcurrent protection or other such devices. A separable mounting post or pedestal to which power outlets are to be mounted is also considered a fitting. Power-outlet fittings are intended for factory or field assembly into or in conjunction with specific power outlets. Power outlets are marked to indicate those fittings with which they are intended to be used.

USE AND INSTALLATION

Power outlets are mounted using a post or pedestal, each detailed as follows:

Post type power outlets are intended to be mounted in concrete at or below grade level, or intended to be secured to some other mounting support. The mounting post contains markings indicating the proper grade level.

Pedestal type power outlets are intended for mounting on a concrete slab.

Unless marked otherwise, a mounting post, pedestal or fitting is not intended to serve as the sole support of a mast for overhead wiring.

Power outlets are not intended for use in recreational vehicle parks or in marinas unless so marked.

Where intended for use as service equipment for mobile homes, temporary sites, marinas and boatyards, or any combination of these, the appropriate wording appears in the marking "Suitable For Use As Service Equipment For ____." Power outlets so marked for use as service equipment are provided with factory installed or field installable overcurrent protection and disconnecting means for service conductors, as well as means for grounding the service neutral conductor.

Power outlets not marked for a specific service use (as described in the previous paragraph) and not incorporating receptacles are suitable as service equipment if marked "Suitable For Use As Service Equipment," or where the neutral is factory bonded to the enclosure, "Suitable For Use Only As Service Equipment."

Power outlets containing overcurrent protection are marked with their short-circuit current ratings in rms symmetrical amps.

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fuses should not be loaded to exceed 80% of their current rating.

Investigation of a power outlet includes a test designed to simulate exposure to beating rain to determine that such exposure will not interfere

442 POWER OUTLETS AND POWER-OUTLET FITTINGS (QPYV)

with successful operation of the apparatus within the enclosure nor result in wetting of the exposed faces of receptacles and associated attachment plugs.

Power outlets are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.15(B)(16) of ANSI/NFPA 70, "National Electrical Code." Termination provisions are determined based on values provided in Table 310.15(B)(16), with no adjustment made for correction factors.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Power Outlet
- Power-outlet Fitting

RELATED PRODUCTS

Portable power distribution equipment is covered under Portable Power Distribution Units and Devices (QPSH) and Portable Power Distribution Panels (QPSM).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 231, "Power Outlets."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Outlet" or "Power Outlet Fitting."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES (QQAQ)

These categories cover the following types of power supplies intended for use in ordinary locations in accordance with the National Electrical Code.

- General Purpose Power Supplies
- Specialty Power Supplies
- Telephone Power Supplies
- Gas Tube Sign Power Supplies
- Information Technology Equipment Power Supplies

The investigation of a device covered in these categories does not include the effects it may have on the system or equipment connected thereto.

Power supplies intended as components of fire protective signaling systems and burglary protective signaling systems equipment are covered under their respective categories.

Power supplies for use in health care facilities are covered under under Power Supplies for use in Health Care Facilities, Guide KFCG.

Power supplies classified in accordance with IEC publications are covered under Power Supplies Classified In Accordance With IEC Publications, Guide QQKV.

Power supplies for use in recreational vehicles are listed in this directory under Power Converters and Power Converter Systems, Guide QPPY.

A power supply not covered under one of the above mentioned categories and for use with only a specific product may be covered under the category of the specific product.

The Listing Mark of UL on products covered under these categories does not extend to connected equipment.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES (QQAQ)

POWER SUPPLIES, GENERAL PURPOSE (QQFU)

GENERAL

This category covers indoor- and outdoor-use power supplies having input ratings of not more than 600 V, direct and alternating current.

Power supplies identified with an enclosure type designation or as "Rain-tight" or "Rainproof" are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Power supplies marked "Intended for Installation in a Protected Environment" or the equivalent are intended to be used in a temperature- and humidity-controlled indoor area that is relatively free of conductive contaminate.

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

PRODUCT IDENTITY

The following product identity appears on the product:

Power Supply

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1012, "Power Units Other Than Class 2."

Products investigated for use in air-handling spaces are marked "Suitable for Use in Other Environmental Air Space in Accordance with Section 300.22(C) of the National Electrical Code," or "Suitable for Use in Air-Handling Spaces," and have been additionally investigated to UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces." Products that bear this marking are suitable for installation in accordance with Article 300 of ANSI/NFPA 70, "National Electrical Code," Chapter 4 of ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," Section 602 of the "International Mechanical Code," and Section 602 of the "Uniform Mechanical Code."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Supply."

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, INFORMATION TECHNOLOGY EQUIPMENT INCLUDING ELECTRICAL BUSINESS EQUIPMENT (QQGQ)

GENERAL

This category covers power supplies rated 600 V or less, intended for use with information technology equipment (ITE) including electrical business equipment. End-use products that employ these types of power supplies are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ).

These power supplies are stand-alone units that deliver power to ITE via external interconnecting means.

This category also covers modular accessory power supplies. Such power supplies are types that are intended for field installation within personal

Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ)—Continued

computers, similar ITE, including telephone equipment. These modular power supplies are also provided with installation instructions relative to safe installation.

All power-supply types covered under this category are marked with input and output ratings that include the voltage and intended maximum load rating in amperes.

When power supplies intended for use with a detachable power-supply cord are not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit is to be separately provided.

The investigation of a product covered under this category does not include the effects it may have on the system or equipment to which it is connected.

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- 60950-1
- 60950-22
- Information Technology Equipment Power Supply
- I.T.E. Power Supply
- ITE Power Supply
- QQGQ Power Supply
- UL 60950-1
- UL 60950-22

The product identity for accessories includes the word "Accessory."

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements," and ANSI/UL 60950-22, "Information Technology Equipment – Safety – Part 22: Equipment to be Installed Outdoors."

All low-voltage outputs (maximum 42.4 V peak or 60 V dc) are safety extra-low-voltage (SELV) as defined in ANSI/UL 60950-1, and, where noted in the test report, SELV for wet locations as defined in ANSI/UL 60950-22. An output marked "LPS" has been determined to have an output level at or below the limited power-source level specified in ANSI/UL 60950-1, as it relates to the requirements for equipment supplied by the output.

An output marked "Class 2" has additionally been investigated to ANSI/UL 1310, "Class 2 Power Units."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

For accessories, the Certification Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number or file number, and the category identifier "Information Technology Equipment Power Supply" (or "I.T.E. Power Supply" or "ITE Power Supply"), "QQGQ Power Supply," or the standard number with or without the "ANSI/UL" prefix (e.g., "ANSI/UL 60950-1," "60950-1").

For accessories, the Listing Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product. The category identifier for accessories includes the word "Accessory."

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufac-

Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ)—Continued

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, SPECIALTY (QIQJ)

USE

This category covers indoor- and outdoor-use power supplies having input ratings of not more than 600 V, direct and alternating current.

These power supplies are intended for, but not necessarily limited to, specific uses such as to supply some household appliances, electroplating equipment, school laboratory equipment, pipe organs, cathodic protection equipment, power supply/battery charger combinations, and industrial equipment, including inverters and converters.

This category also covers permanently connected Class 2 power units. Other types of Class 2 power units are covered under Transformers, Class 2, Class 3 (XOKV) and Direct-plug-in and Cord-connected Class 2 Power Units (EPBU).

Power supplies identified with an enclosure type designation or as "Rain tight" or "Rainproof" are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

PRODUCT MARKINGS

Power supplies marked "Intended for installation in a protected environment" or the equivalent are intended to be used in a temperature- and humidity-controlled indoor area that is relatively free of conductive contaminate.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- CCTV Camera Power Supply
- DC Power Supply
- Low-voltage-lighting Power Supply
- School Laboratory Power Supply
- Specialty Power Supply

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

See Power Supplies, General Purpose (QQFU).

ADDITIONAL INFORMATION

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1012, "Power Units Other Than Class 2."

Products with a marked Class 2 output have been additionally investigated to ANSI/UL 1310, "Class 2 Power Units."

Products investigated for use in air-handling spaces are marked "Suitable for Use in Other Environmental Air Space in Accordance with Section 300.22(C) of the National Electrical Code," or "Suitable for Use in Air-Handling Spaces," and have been additionally investigated to UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces." Products that bear this marking are suitable for installation in accordance with Article 300 of ANSI/NFPA 70, "National Electrical Code," Chapter 4 of ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," Section 602 of the "International Mechanical Code," and Section 602 of the "Uniform Mechanical Code."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

Power Supplies, Specialty (QQIJ)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, TELEPHONE (QQJE)

GENERAL

This category covers telephone power supplies having input ratings of not more than 600 V, direct and alternating current, intended for use with telephone exchange equipment, telephone appliances, and telephone accessories.

REBUILT PRODUCTS

This category also covers telephone power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt telephone power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt telephone power supplies are subject to the same requirements as new telephone power supplies.

PRODUCT IDENTITY

The following product identity appears on the product:

Telephone Power Supply

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

See Power Supplies, General Purpose (QQFU).

ADDITIONAL INFORMATION

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1459, "Telephone Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Telephone Power Supply."

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES FOR USE WITH AUDIO/VIDEO, INFORMATION AND COMMUNICATION TECHNOLOGY EQUIPMENT (QQJQ)

GENERAL

This category covers power supplies rated 600 V or less, intended for use with products covered under Audio/Video, Information and Communication Technology Equipment (AZOT).

These power supplies are stand-alone units that deliver power to the above end-use products via external interconnecting means.

This category also covers modular accessory power supplies. Such power supplies are types that are intended for field installation within computing, telecommunication, or similar equipment. These modular power supplies are also provided with installation instructions relative to safe installation.

All power-supply types covered under this category are marked with input and output ratings that include the voltage and intended maximum load rating in amperes.

When power supplies intended for use with a detachable power-supply cord are not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit will be separately provided.

The investigation of a product covered under this category does not include the effects it may have on the specific system or equipment to which it is connected.

Power Supplies for Use with Audio/Video, Information and Communication Technology Equipment (QQJQ)—Continued

REBUILT PRODUCTS

This category also covers products that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt products are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt products are subject to the same requirements as new products.

PRODUCT IDENTITY

The following product identity appears on the product:

Power Supply

Other product identities may be used as shown in the individual certifications.

The product identity for accessories includes the word "Accessory."

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product identity, or is otherwise marked on the product nameplate.

ADDITIONAL INFORMATION

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 62368-1, "Audio/Video, Information and Communication Technology Equipment - Part 1: Safety Requirements."

All low-voltage outputs are Class 1 electrical energy sources (ES1) as defined in ANSI/UL 62368-1. An output marked "LPS," "PS1" or "PS2" has been determined to have an output level at or below the limited power-source level, Class 1 electrical power source (PS1) or Class 2 electrical power source (PS2), respectively, specified in ANSI/UL 62368-1, as it relates to the requirements for equipment supplied by the output.

An output marked "Class 2" has additionally been investigated to ANSI/UL 1310, "Class 2 Power Units."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

For accessories, the Certification Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Supply," or other appropriate product name as shown in the individual Listings.

For accessories, the Listing Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product. The category identifier for accessories includes the word "Accessory."

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product name, or is otherwise marked on the product nameplate.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC UNDERGROUND CONDUIT WITH CONDUCTORS (QQRK)

USE AND INSTALLATION

This category covers electric cable, which is a factory assembly of one or more certified insulated wires or cables, and may include one or more insulated or bare equipment grounding conductor(s), all enclosed in a high-density polyethylene conduit, intended for underground installation in accordance with Article 354 of ANSI/NFPA 70, "National Electrical Code" (NEC), or for highway lighting, utility company installations and similar uses not within the scope of the NEC. This product is intended for installation and use in accordance with the following information.

NONMETALLIC UNDERGROUND CONDUIT WITH CONDUCTORS (QQRK)

The range of trade sizes is from 1/2 in. to 4 (metric designators 16 to 103) inclusive.

The product is intended for embedment in concrete and/or for direct burial in the earth to a depth specified in the NEC, or by the Authority Having Jurisdiction.

The product is provided in a continuous length on a reel and intended to be installed without splices underground. The ends of cable runs are intended to be stubbed-up through concrete or directly from earth into equipment enclosures, cabinets or lighting-pole bases.

Conductors in the cable are rated 600 V or higher and are suitable for use in wet and dry locations. The conductors fill the internal cross section of the tube in accordance with Chapter 9 of the NEC.

For cable rated 600 V through 35 kV, the voltage ratings of all conductors in a construction are the same. The ampacity of the conductors is to be determined on the basis of the AWG size, the temperature ratings of the conductors, and the number of current-carrying conductors in the cable, in accordance with the NEC.

The smallest radius to which the cable may be bent in the installation is:

Trade Size	Metric Designator	Min Bending Radius (in.)
1/2	16	10
3/4	21	12
1	27	14
1-1/4	35	18
1-1/2	41	20
2	53	26
2-1/2	63	36
3	78	48
4	103	60

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Nonmetallic Underground Conduit with Conductors
 Preamsembled Cable in Nonmetallic Conduit

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1990, "Nonmetallic Underground Conduit with Conductors."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Preamsembled Cable in Nonmetallic Conduit" or "Nonmetallic Underground Conduit with Conductors."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREFABRICATED ASSEMBLIES (QQRX)

This category covers prefabricated assemblies, which are factory-built assemblies incorporating pre-installed materials and equipment which, after installation, are usually concealed and may not be accessible for inspection at the installation site.

Materials, including the methods used for the installation of electrical, mechanical, heating and plumbing equipment incorporated in these assemblies by their manufacturer, have been judged under the requirements of UL, which are based on ANSI/NFPA 70, "National Electrical Code," and model fire, building, plumbing and mechanical codes.

Authorities Having Jurisdiction should be consulted before installation.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

PREFABRICATED ASSEMBLIES (QQRX)

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANUFACTURED WIRING SYSTEMS (QQVX)

USE AND INSTALLATION

This category covers prefabricated wiring systems that may incorporate modular multipole connectors, AC cable, MC cable, flexible metal conduit, hard usage cord, outlet boxes, splitter assemblies, remote control switching assemblies and devices. The wiring systems cannot be field inspected by the Authority Having Jurisdiction (AHJ) without damage to the assembly.

Manufactured wiring systems suitable for patient care areas are intended for installation in accordance with Article 517 of ANSI/NFPA 70, "National Electrical Code" (NEC).

These prefabricated modules and assemblies are intended for installation rearrangement and inspection in accessible locations in accordance with Article 604 of the NEC. AHJs should be consulted before installation.

This equipment is intended to be connected to supply circuits of up to 600 V ac and maximum rating of 40 A per circuit.

A manufactured wiring system is suitable for interconnection with another Listee's manufactured wiring system when specifically identified in the installation instructions.

PRODUCT MARKINGS

Each bi-directional wiring assembly is marked "WARNING: Risk of Fire or Electric Shock," and the following or equivalent: "Do not electrically connect to more than one source of supply. Always determine that the wiring assembly is electrically connected to one and only one source of supply."

Manufactured wiring systems suitable for installation in patient care areas are marked "Suitable for patient care areas of health care facilities other than anesthetizing locations."

Manufactured wiring systems suitable for installation in ducts are marked "Suitable for use in ducts."

Manufactured wiring systems suitable for installation in air-handling spaces other than ducts are marked "Suitable for use in environmental air-handling spaces (plenums)."

Assemblies of manufactured wiring systems suitable for use in outdoor locations are marked "Outdoor."

PRODUCT IDENTITY

One of the following product identities appears on the product:

Distribution Box

Tap Box

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 183, "Manufactured Wiring Systems."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Distribution Box" or "Tap Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SECTIONS AND UNITS (QQXX)

USE AND INSTALLATION

This category covers factory-built assemblies for use within, or as part of, the structure of buildings for commercial, industrial and residential use. These assemblies may incorporate pre-installed electrical power distribution systems comprised of certified electrical components, which are usually concealed and may not be accessible for inspection at the installation site. Some assemblies may incorporate additional certified equipment.

PRODUCT CATEGORIES BY CATEGORY CODE

Sections and Units (QQXX)—Continued

Special occupancies as specified in ANSI/NFPA 70, "National Electrical Code," are not covered under this category unless specified in the individual certifications.

Raised floor systems have been investigated for support of weight loads and corrosion protection of steel parts as identified in the individual certifications.

The structural requirements vary with the type of building construction, occupancy and location of installation and are not investigated under this category.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Some assemblies covered under this category have additionally been investigated to ANSI/UL 723, "Test for Surface Burning Characteristics of Building Materials," and may be marked with a designation "FHC X/Y" on the assembly that denotes these products have a flame-spread value of "X" or less and a smoke-developed value of "Y" or less.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Prefabricated Dental Unit
- Prefabricated Hospital Console
- Prefabricated Wall Panel

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in ANSI/NFPA 70, "National Electrical Code."

The basic standard used to investigate products in this category for flame-spread and smoke-developed values is ANSI/UL 723, "Test for Surface Burning Characteristics of Building Materials." Such products are noted in the individual certifications.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

One Certification Mark is applied to each section or unit.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Prefabricated *."

* The appropriate product name as shown in the individual Listings

One Listing Mark is applied to each section or unit.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRING ASSEMBLIES (QQYZ)

GENERAL

This category covers prefabricated wiring systems comprised of certified electrical components that could be field assembled and inspected by an Authority Having Jurisdiction (AHJ), but are assembled in the factory prior to field installation.

Prefabricated wiring assemblies incorporate certified conduit, tubing or cable, conductors and fittings intended for field installation in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). They may be factory assembled to outlet or junction boxes, box-mounting brackets, and wiring devices.

Prefabricated wiring assemblies are marked with the conduit, tubing or cable type, and the conductor size and type to permit determination of their suitability for a specific application and ampacity in accordance with the NEC. A parts list is provided with each assembly to identify the extent of the product.

Materials, including the methods used for the installation of electrical, mechanical and heating equipment incorporated in these assemblies by their manufacturer, have been investigated to requirements of UL, which are based on the NEC, ANSI/NFPA 72, "National Fire Alarm Code," and model building and mechanical codes.

Wiring Assembly Kits

Wiring assembly kits for final assembly in the field consist of a package that contains some or all: length(s) of certified conduit, tubing or cable, cer-

Wiring Assemblies (QQYZ)—Continued

tified fittings appropriate for the type of conduit, tubing or cable, outlet or junction boxes, conductors, or other devices.

The packaging for wiring assembly kits is marked with the conduit, tubing, or cable size and type, and the conductor size and type, if provided, to permit determination of their suitability for a specific application and ampacity in accordance with the NEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

Conduit Kits

Conduit kits for final assembly in the field consist of a package that contains some or all: length(s) of certified conduit or tubing, certified fittings appropriate for the type of conduit or tubing, outlet or junction boxes, or other devices.

The packaging for conduit kits is marked with the conduit or tubing size and type to permit determination of their suitability for a specific application in accordance with the NEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

Surface Raceway Kits

Surface raceway kits for final assembly in the field consist of a package that contains some or all: length(s) of certified surface metal or nonmetallic surface raceway, certified fittings appropriate for the surface raceway, or other devices.

The packaging for surface raceway kits is marked with the raceway size and the number, type and size of conductors that may be installed in the certified raceway, to permit determination of its suitability for a specific application in accordance with the NEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Conduit Kit
- Surface Raceway Kit
- Wiring Assembly
- Wiring Assembly Kit

RELATED PRODUCTS

For products covered by Article 604 of the NEC, see Manufactured Wiring Systems (QQVX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in ANSI/NFPA 70, "National Electrical Code."

UL MARK

The Certification Mark of UL on the factory-assembled wiring assembly or the packaging of a wiring assembly kit is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the factory-assembled wiring assembly or the packaging of a wiring assembly kit is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Wiring Assembly," "Wiring Assembly Kit," "Conduit Kit" or "Surface Raceway Kit."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREFABRICATED BUILDINGS (QRAR)

These are factory-built buildings, structures, and building assemblies incorporating pre-installed materials and equipment which, after installation, are usually concealed and may not be accessible for inspection at the installation site.

They are intended for installation subject to approval by the Authority Having Jurisdiction.

The buildings, structures, and building assemblies have been investigated in accordance with one or more Model Codes (such as Building, Fire, Plumbing, Mechanical, Gas, Energy) and the National Electrical Code and/or a State Code and/or an applicable Building Code of the local jurisdiction. As an alternate, the building, structure, and building assemblies have been investigated in accordance with one or more specific areas of a code such as electrical, plumbing, mechanical, structural, etc.

When the Building Code does not include specific requirements for such features as air cooling and heating systems, fuel supply systems, chimney and venting systems, etc., the applicable requirements of the National Fire Codes are used.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMPOSITE PANELS (QRSY)

USE AND INSTALLATION

This category covers composite panels, which are factory-built panel assemblies intended for use within or as part of the structure of buildings for commercial, industrial and residential use. These assemblies incorporate pre-installed branch-circuit electrical power distribution systems that are usually concealed and may not be accessible for inspection at the installation site. Some panels incorporate audio, lighting, ventilation fans, and other certified utilization equipment.

The structural strength requirements vary with live loads, dead loads, and seismic conditions of each locality. Authorities Having Jurisdiction should be consulted with respect to their requirements for panel systems.

INSTALLATION INSTRUCTIONS

A copy of the installation and operation instructions are provided with each panel if shipped separately or with each set of panels intended to be installed as a system.

The composite panel system is provided with an assembly diagram and with an electrical diagram specifying the specific locations of the field-installed wiring connections, the connections between composite panel sections, factory-installed utilization equipment, and the intended field-wiring branch-circuit-conductor connection points of the panel system.

The installation instructions indicate which circuits are factory installed.

PRODUCT MARKINGS

Each input power feed conduit whip, cord or building field-wiring-connection point to the panel system is marked with a schematic wiring diagram or the equivalent, indicating the circuits and conductors provided and the required rating of the branch circuit to which it is to be connected.

A panel system with other than a single-phase circuit has the convenience receptacles and utilization equipment marked by a letter, number, color, or a similar designation to indicate the circuit in the system to which the receptacle or utilization equipment is connected.

Each panel system electrical accessory that is shipped separately from the major panel system to which it is to be connected is marked with respect to its intended use and interrelationship with the panel system; for example, "For Use with Composite Panel Series ____," in which the appropriate series or catalog number is designated. When separable components are factory assembled and shipped together, only the complete assembly and not the component is marked.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1294, "Outline of Investigation for Composite Panels," and ANSI/NFPA 70, "National Electrical Code."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**COMPOSITE PANEL
AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY**
or
**COMPOSITE PANEL ACCESSORY
FOR USE WITH PANEL SERIES [panel designation]
AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY**
Alternate UL Mark
UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**COMPOSITE PANEL
AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY**
Control No.
or

Composite Panels (QRSY)—Continued

**COMPOSITE PANEL ACCESSORY
FOR USE WITH PANEL SERIES [panel designation]
AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY**
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**COMMERCIAL AND INDUSTRIAL
PREFABRICATED BUILDINGS AND
UNITS (QRXA)**

GENERAL

This category covers the installation of electrical systems in commercial or industrial prefabricated buildings and units, including, but not limited to, power-distribution buildings and units, refrigeration building and units, guard sheds, toll and phone booths, drive-up ATM booths, canopy shelters, traffic-control booths, indoor data/cash offices, power-wall modules, sound-isolation buildings, water-pump-station buildings, stationary ITE server or data-center buildings, storage buildings (for other than hazardous materials), and other similar buildings and units.

These factory-built buildings and units incorporate pre-installed materials and equipment which, after installation, may be concealed and may not be accessible for inspection at the final installation site. The final site installation of these prefabricated buildings and units is subject to approval by the Authority Having Jurisdiction.

These prefabricated buildings and units are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Each Subscriber must successfully complete an Initial Qualification Inspection for each manufacturing facility, demonstrating the capability to produce buildings or units conforming to UL program requirements. Each Subscriber's factory quality control system is audited on an annual basis. Each building or unit must be inspected during at least one stage of production for compliance with the applicable Articles of the NEC.

UL CERTIFICATE

The UL Certificate of Inspection is the only method provided by UL to identify prefabricated buildings and units inspected by UL under UL's Building Inspection Certificate Services Program.

The prefabricated buildings and units for which UL issues Certificates are considered by UL to comply with the applicable requirements of the NEC at the time of inspection. The Certificate is only valid when accompanied by a completed UL Inspection Report. The UL Inspection Report identifies applicable plan drawings that indicate all the equipment included in the building at the time of manufacturing. UL does not know what the effect of a modification to the electrical system or equipment, or to the construction of a prefabricated building or unit, subsequent to the inspection, may have on the safety of the product or the continued validity of the Certificate unless the modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to comply with the applicable requirements.

If the prefabricated building or unit is shipped in multiple sections or "knocked down," the number and description of the sections required to complete the building or unit are included on a building's nameplate. Instructions for completion of the building, including any wiring connections to be completed at the installation site, are also provided.

The Certificate is not transferable. UL reserves the right to void a Certificate at any time. The Certificate does not indicate compliance with any UL product certification program, nor does it entitle the Subscriber to use the UL Mark. UL assumes no liability for any loss that may result from failure of the equipment, incorrect certification, or nonconformity with requirements.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRESS AND OTHER POWER-OPERATED MACHINE CONTROLS AND SYSTEMS (QUEQ)

This category covers controls and systems intended for industrial or commercial application on power-operated machines intended for such uses as pressing, punching, shearing or breaking operations. They may be designed for use on particular types of equipment such as pneumatic- or hydraulic-powered devices or mechanically operated part or full revolution types of machines. The control or system is intended to reduce the risk of bodily injury resulting from machine operation. The intended use of the control is noted in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRESENCE-SENSING DEVICES (QUHP) USE

This category covers presence-sensing devices intended for use in machine-control systems where they can be interconnected to the control system. Presence-sensing devices detect the presence of an object or body part and are used as a part of the machine safeguarding system to reduce the risk of bodily injury from moving machine parts.

Presence-sensing devices investigated for press initiation are noted in the individual Listings, and are intended to be in accordance with Section (11)(A) of 29CFR1910.217, "Mechanical Power Presses."

SPECIAL CONSIDERATIONS

These products are limited to use on part-revolution types of machines or machines where operation can be interrupted and motion stopped at any point in the machine operation cycle.

PRODUCT IDENTITY

The following product identity appears on the product:
Presence-sensing Device

RELATED PRODUCTS

Presence-sensing devices employing active opto-electronic protective devices (AOPD) consisting of one or more light beams for the sensing function are covered under Active Opto-electronic Protective Devices (NIPF).

Presence-sensing devices employing active opto-electronic protective devices responsive to diffuse reflection (AOPDDR) consisting of one or more laser scanners for the sensing function are covered under Active Opto-electronic Protective Devices Responsive to Diffuse Reflection (NIPM).

ADDITIONAL INFORMATION

For additional information, see Press and Other Power-operated Machine Controls and Systems (QUEQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," and UL 991, "Tests for Safety-Related Controls Employing Solid-State Devices."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Presence Sensing Device."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRESS CONTROLS (QUKQ)

USE

This category covers press controls intended for use in press control systems where they are interconnected with other components, such as push-button hand controls, valves, air cylinders, etc. When the press control or system is applied as intended, it is judged to be in accordance with Occupational Safety and Health Administration Standard Section 1910.217.

Press Controls (QUKQ)—Continued

PRODUCT IDENTITY

The following product identity appears on the product:
Press Control

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 79, "Electrical Standard for Industrial Machinery," in addition to Article 670 of ANSI/NFPA 70, "National Electrical Code."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Press Control."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS CONTROL EQUIPMENT, ELECTRICAL (QUYX)

GENERAL

This category covers process control equipment rated 600 V maximum and intended for use in accordance with ANSI/NFPA 70, "National Electrical Code." These products include instruments for measurement, recording and/or control of process variables (e.g., temperature, pressure, flow) and auxiliary devices used with these instruments (e.g., sensors, transducers, valve operators).

Equipment intended to be installed only in process control panels is so identified.

Process control equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

Open-type process control equipment is not provided with a complete enclosure and is intended to be placed in an industrial control panel or similar type of enclosure.

The investigation of process control equipment does not include investigation of the function of the controlled equipment.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Open-type Process Control Equipment
Process Control Accessory
Process Control Enclosure
Process Control Enclosure Part
Process Control Equipment
Process Control Subassembly

The words "Process Control Equipment" may be abbreviated "Proc. Cont. Eq."

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Process control equipment intended for mounting in hazardous (classified) locations or with circuits that extend into hazardous (classified) locations is covered under Process Control Equipment for Use in Hazardous Locations (QUZW) and Process Control Equipment for Use in Zone Classified Hazardous Locations (QVA).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Equipment – Part 1: General Requirements."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

PROCESS CONTROL EQUIPMENT, ELECTRICAL (QUYX)

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

When the size or shape of a subassembly makes it impractical to bear the complete Certification Mark, the product may be marked with the UL symbol, "QUYX" and the file number, provided that the complete Certification Mark appears on the smallest shipping container.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Process Control Equipment," "Open-type Process Control Equipment," "Process Control Enclosure," "Process Control Enclosure Part," "Process Control Subassembly," "Process Control Accessory," or other appropriate product name as shown in the individual Listings. The words "Process Control Equipment" may be abbreviated "Proc. Cont. Eq."

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, "QUYX" and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (QUZW)

USE AND INSTALLATION

This category covers process control equipment rated 600 V maximum and intended for use in accordance with ANSI/NFPA 70, "National Electrical Code." These products include instruments for measurement, recording and/or control of process variables (e.g., temperature, pressure, flow) and auxiliary devices used with these instruments (e.g., sensors, transducers, valve operators), including associated apparatus providing intrinsically safe outputs (e.g., barriers providing intrinsically safe circuit extensions).

Intrinsically safe systems have been investigated on the basis that all equipment connected to the system is certified as part of the system unless otherwise indicated and is used as intended.

Equipment intended to be installed only in process control panels is so identified in the individual certifications. Such equipment is not intended for field installation.

Safety may be affected if the manufacturer's installation instructions are not followed.

The investigation of process control equipment does not include investigation of the function of the controlled equipment.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Process Control Equipment for Use in Hazardous Locations
 - Process Control Equipment (Associated Apparatus)
 - Process Control System for Use in Hazardous Locations
 - Process Control Unit for Use in Hazardous Locations
 - Process Control Unit (Associated Apparatus)

The words "Process Control Equipment" may be abbreviated "Proc. Cont. Eq."

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Equipment investigated for use only in the hazardous (classified) locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

Process control equipment intended for use in unclassified locations is covered under Process Control Equipment, Electrical (QUYX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use; Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTORS (QVGK)

This category covers devices intended for use with telephone, telegraph, fire alarm (other than municipal circuits) and similar signaling circuits to discharge high potential currents to ground. These protectors are divided into four separate categories:

- Primary Protectors for Communication Circuits (QVGV)
- Primary Protectors for Coaxial Communications Circuits (QVKC)
- Protectors for Antenna Lead-in Conductors (QVLA)
- Secondary Protectors for Communication Circuits (QVRG)
- Isolated Loop Circuit Protectors for Communication Circuits (QVGQ)

The primary protectors are intended to be installed, used and maintained by operating communications companies that own the outside plant facilities that provide service to the subscriber premise. They are intended for installation as defined in Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC). A primary protector may be housed in its own enclosure or secured within a Listed compatible network interface box.

Primary coaxial protectors are intended for use on coaxial communications circuits and network-powered broadband communications systems as defined in Article 830 of the NEC. The protectors are typically installed by the public utility company that provides the service and are installed at the point of entry where the coaxial circuit enters the subscriber premises. The protector may be housed in its own enclosure or secured within a Listed compatible network interface box.

Protectors for antenna lead-in conductors are used to limit surges on the antenna lead-in cable that connects the antenna to the receiver/transmitter electronics. Typical applications include antenna installations for radio and television receiving equipment, amateur radio transmitting and receiving equipment, cellular telephone towers and WiMax or WiFi wireless networks.

A secondary protector may be installed, used and maintained by the customer, interconnecting company, or the operating company. A secondary protector must employ an overcurrent protection system, such as a line fuse.

The purpose of the isolated loop circuit protector is to suppress abnormal voltages caused by hazards such as lightning and other EMI transients. An isolated loop circuit protector is intended for use on data or communication lines that are not exposed to accidental contact with electric light or power conductors operating at over 300 V to ground.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTORS (QVGV)

PRIMARY PROTECTORS FOR COMMUNICATIONS CIRCUITS (QVGV)

GENERAL

This category covers protectors intended for use on communication circuits as defined in Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC).

These protectors are intended to suppress abnormal voltage conditions that may exist on the circuit due to accidental contact with electric light or power conductors operating at or over 300 V to ground as defined in the NEC. These devices may also be used to protect against electrical transients from an electromagnetic disturbance or higher than normal voltages induced on the communication circuits due to close proximity of the protected circuit to electric light or power conductors.

This category includes both fuse and fuseless protectors. Requirements for the location and installation of primary protectors are contained in the NEC. The individual certifications provide the following information: Protector block number, catalog numbers of arresters that may be employed in a certified block, types of arresters, design features, maximum fusing wire that is used in series with the block, and indoor or outdoor use.

The maximum size fusing wire is indicated by the following alphabetical designations:

- A - 24 AWG, copper wire with thermoplastic insulation
- B - 22 AWG, copper wire with thermoplastic insulation
- C - 20 AWG, 40% copper-clad wire
- D - 26 AWG, copper wire with thermoplastic insulation

Protector blocks suitable for outdoor use are also suitable for use indoors. Blocks marked for indoor use are suitable for installation only indoors.

This category also covers network interface devices, which are two-compartment enclosures that serve to provide a demarcation between the equipment of the private residence and the outside plant. The first compartment, located on the incoming side of the telephone line, may employ a certified compatible telephone protector, where the compatibility is determined by UL. The second compartment employs terminals and standard telephone jacks for use by the resident. Indoor and outdoor certification is subject to the same requirements used in the investigation of telephone protectors.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Network Interface Device
 - Signal Circuit Protector
 - Signal Circuit Protector Enclosure
 - Telephone Protector

The product identity for protectors that comply with the 8/20, 10 kA surge test as required by ANSI/NFPA 780 includes "10 kA."

RELATED PRODUCTS

Separate network interface devices intended for use without a protector are covered under Communication Circuit Accessories (DUXR).

Protectors intended for use with municipal fire alarm circuits are covered under Miscellaneous Devices (UXKV).

Secondary protectors intended for telephone, telegraph, fire alarm and similar signaling circuits are covered under Secondary Protectors for Communications Circuits (QVRG).

ADDITIONAL INFORMATION

For additional information, see Protectors (QVGK) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 497, "Protectors for Paired-Conductor Communications Circuits."

Protectors that have been subjected to an 8/20, 10 kA surge have additionally been investigated to ANSI/NFPA 780, "Standard for the Installation of Lightning Protection Systems" (2004).

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Signal Circuit Protector," "Telephone Protector," "Network Interface Device" or "Signal Circuit Protector Enclosure."

The product name for protectors that comply with the 8/20, 10 kA surge test as required by ANSI/NFPA 780 includes "10 kA."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

Primary Protectors for Communications Circuits (QVGV)—Continued

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRIMARY PROTECTORS FOR COAXIAL COMMUNICATIONS CIRCUITS (QVVC)

GENERAL

This category covers primary coaxial protectors intended for use on coaxial communication circuits and network-powered broadband communications systems as defined in Article 830 of ANSI/NFPA 70, "National Electrical Code" (NEC).

The protectors are typically installed by the public utility company that provides the service and are installed at the point of entry where the coaxial circuit enters the subscriber premises.

The primary coaxial protectors are intended to suppress abnormal voltage conditions that may exist on the circuit due to accidental contact with electric light or power conductors operating at over 300 V to ground as defined in Articles 800 and 830 of the NEC. These protectors may also be used to protect against electrical transients produced from electromagnetic disturbance on the communication circuits.

The primary coaxial protectors may also be used in low- and medium-network-powered sources as defined in the Limitations for Network-Powered Broadband Communications Systems Table of Article 830 of the NEC. The protectors are certified for use with a current-limiting or extinguishing device, or current-limiting or extinguishing component specified in the individual certifications and installation instructions. The current-limiting or extinguishing device, or current-limiting or extinguishing component may be employed within the protector or may be a separate device or component coordinated externally with the protector.

Coaxial protectors may be used indoors or outdoors. Coaxial protectors marked for outdoor use are also suitable for use indoors. Protectors marked for indoor use are intended for indoor installation only. The coaxial protectors may be installed within a certified enclosure or network interface device or may be installed as a stand-alone device.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Primary Coaxial Protector

The product identity for protectors that comply with the 8/20, 10 kA surge test as required by ANSI/NFPA 780 includes "10 kA."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 497C, "Protectors for Coaxial Communications Circuits."

Protectors that have been subjected to an 8/20, 10 kA surge have additionally been investigated to ANSI/NFPA 780 (2004), "Standard for the Installation of Lightning Protection Systems."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Primary Coaxial Protector."

The product name for protectors that comply with the 8/20, 10 kA surge test as required by ANSI/NFPA 780 includes "10 kA."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTORS FOR ANTENNA LEAD-IN CONDUCTORS (QVLA)

GENERAL

This category covers protectors for antenna lead-in conductors. These devices are used to limit surges on the antenna lead-in cable that connects

Protectors for Antenna Lead-in Conductors (QVLA)—Continued

the antenna to the receiver/transmitter electronics and are connected between the coaxial center conductor and the grounded shield (coaxial cable) or between the individual leads and ground (twisted pair, twin-lead, etc., cable). Typical applications include antenna installations for radio and television receiving equipment, amateur radio transmitting and receiving equipment, cellular telephone towers, and WiMax or WiFi wireless networks.

As covered by these requirements, antenna lead-in protectors typically consist of air-gap arresters, gas tube arresters, solid-state arresters or quarter-wave stub-type devices, or combinations of these devices. They may or may not contain additional components such as inductors or blocking capacitors. These protectors are intended to protect equipment, wiring, and personnel at the premises against the effects of excessive potentials and currents on the cable caused by lightning.

These protectors are investigated for their rated maximum discharge current (I_{max}) using an 8/20 current waveform. This is the maximum impulse current the protector can withstand without affecting its surge-limiting capability or creating a risk of fire, fragmentation or electrical shock. Other common terms for "rated discharge current" include but are not limited to lightning-impulse current, impulse-discharge current, withstand current, surge-discharge current, surge-current capability, discharge current, maximum impulse discharge, surge current, peak pulse current and maximum transient. Protectors with a rated maximum discharge current (I_{max}) of at least 10 kA are suitable for installations in accordance with ANSI/NFPA 780, "Installation of Lightning Protection Systems."

PRODUCT IDENTITY

One of the following product identities appears on the product:

Antenna Lead-in Protector

Antenna Lightning Protector

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Primary protectors intended for use on communication circuits as defined in Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC), are covered under Primary Protectors for Communications Circuits (QVGV).

Primary coaxial protectors intended for use on coaxial communication circuits and network-powered broadband communications systems as defined in Article 830 of the NEC are covered under Primary Protectors for Coaxial Communications Circuits (QVVC).

Antenna discharge units intended for use with radio and television receiving equipment and amateur radio-transmitting and -receiving equipment as defined in Article 810 of the NEC are covered under Antenna Discharge Units (ASWA). Such devices have not been investigated to determine their suitability as lightning protective devices.

Secondary protectors intended for telephone, telegraph, fire alarm and similar signaling circuits are covered under Secondary Protectors for Communications Circuits (QVRG).

Data communications circuit protectors and protectors intended for use on Class 2 or Class 3 remote control, signaling and power-limited circuits or fire protection signaling circuits as defined in Articles 725 and 760 of the NEC are covered under Isolated Loop Circuit Protectors (QVGQ).

ADDITIONAL INFORMATION

For additional information, see Protectors (QVGK) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 497E, "Outline of Investigation for Protectors for Antenna Lead-In Conductors."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Antenna Lead-in Protector" or "Antenna Lightning Protector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Protectors for Antenna Lead-in Conductors (QVLA)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SECONDARY PROTECTORS FOR COMMUNICATIONS CIRCUITS (QVRG)

GENERAL

This category covers secondary protectors intended for use on communication circuits as defined in Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC).

These protectors are intended to suppress abnormal voltage and/or current conditions that bypass the primary protector. These devices limit currents to less than the current-carrying capacity of certified communication wire employed in the communication loop of the protected premise. Any overvoltage protection and/or grounding connection is intended to be electrically located on the equipment side of the protector's current-limiting means.

Secondary protectors covered in this category have been investigated for use only on the equipment side of a primary protector (QGV) and are intended to be installed only on the protected portion of a communication circuit. In those cases where a primary protector is not required, as defined in Article 800 of the NEC, the secondary protector may be installed or connected into the communication circuit without the use of a primary protector.

The current-limiting, fusing or extinguishing operation may be accomplished by a current-protection device located within the secondary protector, or the secondary protector may be used with a "sneak-current protector." A sneak-current protector serves to limit abnormal fault current that is generated due to contact of the telephone lines with AC power lines. The sneak-current protector is a separate device or module that is intended for mounting on a certified compatible base assembly. This current-protection system may employ a fuse, current-limiting circuitry or other similar means to limit the abnormal fault current condition.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Secondary Protector
- Secondary Telephone Protector
- Sneak-current Protector

RELATED PRODUCTS

Primary telephone protectors are covered under Primary Protectors for Communication Circuits (QGV).

Other telephone equipment is covered under Telephone Appliances and Equipment (WYQQ).

Wire and cable intended to be permanently installed in a building in accordance with Article 800 of the NEC are covered under the appropriate wire and cable categories.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 497A, "Secondary Protectors for Communications Circuits."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTORS FOR USE IN HAZARDOUS LOCATIONS (QVSC)

ISOLATED LOOP CIRCUIT PROTECTORS FOR USE IN HAZARDOUS LOCATIONS (QVSI)

USE

This category covers protectors intended for use on Class 2 or Class 3 remote control, signaling and power-limited circuits or fire-protection-signaling circuits as defined in Articles 725 and 760 of ANSI/NFPA 70, "National Electrical Code."

These protectors are intended as suppression devices for abnormal voltage conditions that may exist on the circuit due to electrical transients from an electromagnetic disturbance. These protectors are not intended for use on circuits exposed to accidental contact with electric light or power conductors operating at over 300 V to ground.

PRODUCT IDENTITY

The following product identity appears on the product:

Isolated Loop Circuit Protector for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 497B, "Protectors for Data Communications and Fire-Alarm Circuits."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Isolated Loop Circuit Protector for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPING EQUIPMENT FOR FIRE SERVICE (QVUT)

The following information and listings relate to fire pumps, drivers, controllers and accessory equipment used in supplying water for fire protection purposes.

A fire pump unit generally includes the separately Listed fire pump, driver, controller, and other accessory equipment. The individually Listed products are intended to be installed and tested for acceptable performance in accordance with the requirements of the Standard of the National Fire Protection Association for the Installation of Centrifugal Fire Pumps, NFPA 20.

Authorities having jurisdiction should be consulted before installation.

BATTERY CHARGERS FOR USE WITH INTERNAL COMBUSTION ENGINES DRIVING CENTRIFUGAL FIRE PUMPS (QWIR)

GENERAL

This category covers battery chargers intended for automatically controlling and maintaining the charge on batteries used to start internal-combustion engines driving centrifugal fire pumps. The equipment consists of rectifying stacks, transformers, controlling relays, switches and meters.

PRODUCT IDENTITY

The following product identity appears on the product:

Battery Charger for Use with Fire Pumps

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

Battery Chargers for Use with Internal Combustion Engines Driving Centrifugal Fire Pumps (QWIR)—Continued

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1236, "Battery Chargers for Charging Engine-Starter Batteries."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE PUMP MOTORS (QXZF)

USE

This category covers motors intended for use in fire pump systems. These motors are used to drive centrifugal pumps used for fire service.

PRODUCT MARKINGS

This equipment is marked as follows:

1. Manufacturer's name or trademark
2. Factory identifier (if produced at more than one factory)
3. Model or catalog number
4. Rated voltage
5. Full-load input amperes or watts (or both)
6. Rated full-load speed
7. Rated temperature rise or the insulation system class
8. Rated ambient temperature
9. Time rating, or, if it is a continuous duty motor, then "Continuous" or "CONT"
10. Rated horsepower when 1/8 hp (93 W) or more
11. Code letter to indicate locked-rotor amperes in accordance with ANSI/NFPA 70, "National Electrical Code," for an alternating-current motor rated 1/2 hp (373 W output) or more
12. Secondary volts and full-load amperes, when product is a wound-rotor induction motor
13. Rated frequency expressed in one of the following terms: hertz (Hz), cycles per second (cps or c/s), ac-dc, (number of cycles)/dc (e.g., 60/dc), or ac only – or direct current; and, for a motor intended for use on a polyphase circuit, number of phases
14. Winding – straight shunt, stabilized shunt, compound, or series, for a direct-current motor;
15. Service factor (1.15 or less)
16. Amperes and horsepower at each speed, for a multi-speed motor other than a shaded-pole or a permanent-split-capacitor motor

PRODUCT IDENTITY

The following product identity appears on the product:
Fire Pump Motor

ADDITIONAL INFORMATION

For additional information, see Pumping Equipment for Fire Service (QVUT) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1004-5, "Fire Pump Motors."

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to ANSI/UL 840, "Insulation Coordination Including Clearances and Creepage Distances for Electrical Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMP CONTROLLERS, FIRE (QYZS)

GENERAL

This category covers fire pump controllers, circuit breakers for fire pump controllers, emergency manual operators and remote alarm panels.

Fire pump controllers are intended for starting and stopping centrifugal fire pumps and include nonautomatic and automatic types for electric-driven pumps and combined manual and automatic types for engine-driven pumps. Unless otherwise indicated in the individual certifications, these controllers are intended for use with spark-ignition (gasoline or natural gas) or diesel engines. Controllers suitable for use with spark-ignition internal combustion engines are intended for such engines installed prior to 1974.

These controllers are intended for installation and use in accordance with ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

Fire pump controllers intended for starting and stopping additive pump motors are marked "Additive Pump Controller" or "Limited-service Additive Pump Controller."

Controllers intended for electric-driven, standard-size centrifugal fire pumps are intended for use with squirrel-cage or wound-rotor motors rated 600 V or less.

Controllers intended for squirrel-cage motors may be for across-the-line starting or reduced-voltage starting as indicated in the individual certifications.

"Limited-service controllers" are intended for across-the-line type squirrel-cage motors of 30 hp or less, 600 V or less. Authorities Having Jurisdiction should be consulted before installing controllers of these types.

Manually operable, open-type circuit breakers are intended for use within enclosures of fire pump controllers.

Emergency manual operators are intended for use with internal combustion engines.

Some controllers are suitable for use as service equipment and are so marked. Such marking is an integral part of other required markings.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Additive Pump Controller
- Fire Pump Controller
- Limited-service Additive Pump Controller
- Limited-service Controller

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," and ANSI/UL 218, "Fire Pump Controllers."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Fire Pump Controller," "Limited Service Controller," "Additive Pump Controller," "Limited Service Additive Pump Controller."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Pump Controllers, Fire (QYZS)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMP CONTROLLERS, FIRE, OVER 600 VOLTS (QZGR)

GENERAL

This category covers fire pump controllers having ac voltage ratings in the range of 2.2 kV to 2.5 kV, 4.0 kV to 5.0 kV or 6.2 kV to 7.2 kV, intended for starting and stopping centrifugal fire pumps. These controllers are the automatic or nonautomatic type for electric-driven pumps.

These controllers are intended for installation and use in accordance with ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

These fire pump controllers are intended for use with squirrel-cage motors rated 7.2 kV or less.

These controllers have been investigated for use on three-phase circuits having available fault levels not exceeding the MVA rating appearing on the nameplate. The three-phase available symmetrical MVA is equal to the product of the available symmetrical rms short-circuit current, the line-to-line open-circuit voltage, and a phase factor of 1.73×10^6 .

These controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled; accordingly, they are tested at six times the continuous current rating of the controller at rated voltage.

Some fire pump controllers are provided with an integrally mounted surge arrester to meet the required impulse withstand.

Controllers suitable for use as service equipment are so marked. Such marking is an integral part of other required markings.

These controllers are so constructed that falling dirt or water dripping from the downward vertical does not interfere with the successful operation of the equipment.

Fire pump controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- High-voltage Fire Pump Controller
- High-voltage Foam Pump Controller

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 218, "Fire Pump Controllers," ANSI/UL 347, "High Voltage Industrial Control Equipment," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "High Voltage Fire Pump Controller" or "High Voltage Foam Pump Controller."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMP CONTROLLERS, FIRE, RESIDENTIAL (QZKE)

GENERAL

This category covers fire pump controllers intended for starting, stopping and protecting centrifugal fire pumps in one- and two-family dwellings and manufactured homes. These controllers are the automatic or nonautomatic type for electric-driven pumps.

The equipment and systems employing these controllers are intended for installation and use in accordance with ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes."

Residential fire pump controllers are intended for use with squirrel-cage motors rated 250 V or less.

Pump Controllers, Fire, Residential (QZKE)—Continued

These controllers have been investigated for use on single-phase alternating-current circuits having available fault current levels not exceeding the short-circuit withstand rating appearing on the nameplate.

These controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled; accordingly, they are tested at six times the continuous current rating of the controller at rated voltage.

Controllers suitable for use as service equipment are so marked. Such marking is an integral part of other required markings.

These controllers are so constructed that falling dirt or water dripping from the downward vertical does not interfere with the successful operation of the equipment.

Residential pump controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

PRODUCT IDENTITY

The following product identity appears on the product:

- Residential Fire Pump Controller

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 218, "Fire Pump Controllers," ANSI/UL 508, "Industrial Control Equipment," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection," as applicable to limited-service fire pump controllers.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Residential Fire Pump Controller."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPING EQUIPMENT FOR FIRE SERVICE FOR USE IN HAZARDOUS LOCATIONS (RAHW)

This category covers fire pumps, drivers, controllers and accessory equipment used in supplying water for fire protection purposes.

A fire pump unit generally includes the separately Listed fire pump, driver, controller, and other accessory equipment. The individually Listed products are intended to be installed and tested for acceptable performance in accordance with ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection."

FIRE PUMP CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS (RCYW)

USE

This category covers fire pump controllers, circuit breakers for fire pump controllers, and emergency manual operators.

Fire pump controllers are intended for starting and stopping centrifugal fire pumps and include nonautomatic types and automatic types for electric-driven pumps and combined manual and automatic types for engine-driven pumps. Unless otherwise indicated, these controllers are intended for use with spark ignition (gasoline or natural gas) or diesel engines. Controllers suitable for use with spark ignition internal combustion engines are intended for such engines installed prior to 1974.

Controllers for electric-driven, standard-size centrifugal fire pumps are intended for use with squirrel-cage or wound-rotor motors rated 600 V or less.

Controllers for squirrel-cage motors may be used for across-the-line starting or reduced-voltage starting as indicated in the individual certifications.

Limited-service controllers are intended for across-the-line type squirrel-cage motors of 30 hp or less, 600 V or less. Authorities Having Jurisdiction should be consulted before installing controllers of these types.

PUMPING EQUIPMENT FOR FIRE SERVICE FOR USE IN HAZARDOUS LOCATIONS (RAHW)

Fire Pump Controllers for Use in Hazardous Locations (RCYW)—Continued

Manually operable, open-type circuit breakers are intended for use within enclosures of fire pump controllers. Emergency manual operators are intended for use with internal combustion engines. Some controllers are suitable for use as service equipment and are so marked. Such marking is an integral part of other required marking.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Fire Pump Controller for Use in Hazardous Locations
 Foam Pump Controller for Use in Hazardous Locations
 Limited Service Controller for Use in Hazardous Locations
 Limited Service Foam Pump Controller for Use in Hazardous Locations
 Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," and ANSI/UL 218, "Fire Pump Controllers." The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Fire Pump Controller for Use in Hazardous Locations," "Limited Service Controller for Use in Hazardous Locations," "Foam Pump Controller for Use in Hazardous Locations," "Limited Service Foam Pump Controller for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPS, ELECTRICALLY OPERATED, LIQUID (REUZ)

USE

This category covers submersible and nonsubmersible pumps intended for household, commercial or industrial use, including pumps for fountains, circulation, sewage, effluent, wells, irrigation, building sites (contractor type), sumps and general utility.

The liquids for which a pump has been investigated are marked on the unit or are included in the installation instructions provided with the unit, unless the pump is obviously intended for use with water only, such as an irrigation pump.

Pumps suitable for outdoor use and those for use with heated water are so marked.

REBUILT PRODUCTS

This category also covers submersible and nonsubmersible pumps that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt submersible and nonsubmersible pumps are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt submersible and nonsubmersible pumps are subject to the same requirements as new submersible and nonsubmersible pumps.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Sewage Pump
 Sump Pump
 Water-circulating Pump
 Other product identities may be used as shown in the individual certifications.

PUMPS, ELECTRICALLY OPERATED, LIQUID (REUZ)

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Equipment covered under this category has not been investigated for use in hazardous (classified) locations as defined in ANSI/NFPA 70, "National Electrical Code." Reference to the Hazardous Locations Equipment Directory should be made for equipment that has been investigated for use in hazardous (classified) locations.

The products covered in this category have not been investigated with regard to the effect of their use with combustible or flammable liquids, corrosive liquids, or aqueous solutions containing corrosive materials. Such pumps are covered under Flammable Liquid Pumps (RBQR) and Power-operated Pumps (RBOG).

These pumps have not been investigated for use with or in proximity to swimming pools or spas. Such pumps are covered under Swimming Pool and Spa Equipment, Pumps (WCSX).

Pumping equipment for fire service is covered under Pumping Equipment for Fire Service (QVUT).

Pumps covered in this category have not been investigated for contact with drinking water. Pumps that have been investigated only for contact with drinking water are Classified in accordance with the requirements of NSF/ANSI 61, "Drinking Water System Components - Health Effects" and are covered under Drinking Water System Components (FDNP).

For evaporative cooler pumps, see Evaporative Cooler Retrofit Pumps (AGIS).

See Lead Content Verification of Products in Contact with Potable Water (QNVB).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 778, "Motor-Operated Water Pumps."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sump Pump," "Water Circulating Pump" or "Sewage Pump," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (RFPW)

GENERAL

This category covers purging and pressurizing controls and accessory parts intended to be connected to electrical equipment enclosures that are to be purged and pressurized with clean air or nonflammable gas in accordance with ANSI/NFPA 496, "Purged and Pressurized Enclosures for Electrical Equipment." This category does not cover the purged or pressurized electrical equipment. Purged or pressurized electrical equipment is covered under the individual product category for the particular type of equipment.

TYPES

ANSI/NFPA 496 specifies the following pressurization types:

- Type X** — Reduces the classification within an enclosure from Division 1 to unclassified
- Type Y** — Reduces the classification within an enclosure from Division 1 to Division 2
- Type Z** — Reduces the classification within an enclosure from Division 2 to unclassified

PRODUCT IDENTITY

PRODUCT CATEGORIES BY CATEGORY CODE

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (RFPV)

456

One of the following product identities appears on the product:
 Purge Control for Use in Hazardous Locations
 Purge Control Accessory for Use in Hazardous Locations
 Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**NATIONAL FIRE PROTECTION ASSOCIATION STANDARD FOR PURGED AND PRESSURIZED ENCLOSURES FOR ELECTRICAL EQUIPMENT
 NFPA 496**

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*] FOR USE IN HAZARDOUS LOCATIONS IN ACCORDANCE WITH THE

**NATIONAL FIRE PROTECTION ASSOCIATION STANDARD FOR PURGED AND PRESSURIZED ENCLOSURES FOR ELECTRICAL EQUIPMENT
 NFPA 496**

* **PURGE CONTROL** or **PURGE CONTROL ACCESSORY**, or other appropriate product name as shown in the individual Classifications

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RFPZ)

GENERAL

This category covers purging and pressurizing controls and accessory parts intended to be connected to electrical equipment enclosures that are to be purged and pressurized with clean air or nonflammable gas.

There are three pressurization types:

- px** — Reduces the classification within an enclosure from Zone 1 to unclassified
- py** — Reduces the classification within an enclosure from Zone 1 to Zone 2
- pz** — Reduces the classification within an enclosure from Zone 2 to unclassified

This category does not cover the purged or pressurized electrical equipment. Purged or pressurized electrical equipment is covered under the individual product category for the particular type of equipment.

PRODUCT IDENTITY

One of the following product identities appears on the product:
 Purge Control Accessory for Use in Hazardous Locations
 Purge Control for Use in Hazardous Locations
 Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/ISA-60079-2, "Electrical Apparatus for Explosive Gas Atmospheres - Part 2: Pressurized Enclosures 'p'."

UL MARK

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RFPZ)

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

ANSI/ISA-60079-2

ELECTRICAL APPARATUS FOR EXPLOSIVE GAS ATMOSPHERES - PART 2:

PRESSURIZED ENCLOSURES "p"

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ELECTRICAL APPARATUS FOR EXPLOSIVE GAS ATMOSPHERES - PART 2:

PRESSURIZED ENCLOSURES 'p'

Control No.

* **PURGE CONTROL** or **PURGE CONTROL ACCESSORY**, or other appropriate product name as shown in the individual Classifications.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL QUICK-CONNECT TERMINALS (RFVW)

GENERAL

This category covers quick-connect tabs and quick-connect connectors constructed from plain or plated copper alloy or of nickel or nickel alloy, herein referred to as quick-connect terminals. They are additionally defined as follows:

Quick-connect Wiring Termination — An electrical connection consisting of a male tab and a female connector that can be readily engaged or disengaged without the use of a tool.

Terminal — An electrical connecting device consisting of either a connector or tab.

Tab — A terminal that is inserted in a connector, manufactured to specified tolerances, and intended to mate with a connector to establish a connection in an electrical circuit.

Connector — A terminal that is pushed onto a tab. Quick-connect terminals are intended for use with one or two copper conductors, 22-10 AWG. Ampacity for a two-wire combination is limited to the current associated with the largest of the two conductors.

Quick-connect terminals are not intended for disconnecting under load.

PRODUCT MARKINGS

Cartons containing quick-connect terminals are marked to indicate whether the tab or connector is suitable for the internal wiring of appliances, for field termination of conductors to electrical equipment, or for both.

Cartons containing quick-connect terminals are marked to indicate their suitability for termination of copper wire only.

Cartons containing insulated quick-connect terminals are marked with a voltage rating and the maximum operating temperature for which they have been found acceptable. The marked voltage rating may be 300 V maximum; 600 V maximum; or 600 V maximum building wire, 1000 V maximum signs or luminaires. An insulated terminal is additionally marked with the maximum operating temperature.

Quick-connect terminals to be assembled to wire using a special tool are intended to be assembled using the tool specified by the manufacturer on or in the shipping carton. Such tools are identified by an appropriate marking.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Quick-connect Connector
- Quick-connect Tab

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Quick-connect tabs or connectors constructed from plated steel, or unplated steel of a corrosion-resistant alloy are covered under Electrical Quick-connect Terminals (RFVW2).

The separate molded insulating portion of a quick-connect terminal that is applied after its assembly to the conductor is covered under Connector

Housings (ECCT2). Integral insulators to the quick-connect terminal are covered under this category as part of the quick-connect terminal.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 310, "Electrical Quick-Connect Terminals."

UL MARK

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service.

Alternate UL Mark

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party.

RACEWAY (RGKT)

CELLULAR CONCRETE FLOOR RACEWAY (RGYR)

USE AND INSTALLATION

This category covers cellular concrete floor raceway designed for the installation of electrical conductors in accordance with Article 372 of ANSI/NFPA 70, "National Electrical Code."

Certified cellular concrete floor raceway has fire-resistance ratings, as used in building construction, only when assembled in the manner described in the designs covered under Precast Concrete Units (CFTV).

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector and others concerned with the installation.

PRODUCT IDENTITY

The following product identity appears on the product: Cellular Concrete Floor Raceway

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 263, "Fire Tests of Building Construction and Materials."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party.

Cellular Concrete Floor Raceway Fittings (RHLZ)

USE AND INSTALLATION

This category covers cellular concrete floor raceway fittings designed for the installation of electrical conductors in accordance with the manufacturer's installation instructions.

Certified cellular concrete floor raceway fittings have fire-resistance ratings, as used in building construction, only when assembled in the manner described in the designs covered under Precast Concrete Units (CFTV).

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector and others concerned with the installation.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Cellular Concrete Floor Raceway Fitting
End Closure
Wall Elbow

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Cellular Concrete Floor Raceway (RGYR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 263, "Fire Tests of Building Construction and Materials."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party.

CELLULAR METAL FLOOR RACEWAY (RHZX)

USE AND INSTALLATION

This category covers cellular metal floor raceway designed for the installation of electrical conductors in accordance with Article 374 of ANSI/NFPA 70, "National Electrical Code."

Raceway may be factory constructed or consist of field-assembled components. Each component of field-assembled raceway is marked to identify its relation to the other components of the raceway.

Certified cellular metal floor raceway has fire-resistance ratings, as used in building construction, only when assembled in the manner described in the Designs covered under Steel Floor and Form Units (CHWX).

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector, and others concerned with the installation.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Cellular Metal Floor Raceway
Cellular Metal Floor Raceway Bottom
Cellular Metal Floor Raceway Cover Plate for Use with Certified

Raceway Bottom
Other product identities may be used as shown in the individual certifications.

Cellular Metal Floor Raceway (RHZX)—Continued

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 209, "Cellular Metal Floor Raceways and Fittings."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Metal Floor Raceway," "Cellular Metal Floor Raceway Bottom" or "Cellular Metal Floor Raceway Cover Plate for Use with Listed Raceway Bottom," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Cellular Metal Floor Raceway Fittings (RINV)

USE AND INSTALLATION

This category covers cellular metal floor raceway fittings designed for the installation of electrical conductors in accordance with the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Cellular Metal Floor Raceway (RHZX).

Raceway fittings may be factory constructed or consist of field-assembled components. Each component of a field-assembled raceway is marked to identify its relation to the other components of the raceway.

Certified cellular metal floor raceway fittings have fire-resistance ratings, as used in building construction, only when assembled in the manner described in the designs covered under Steel Floor and Form Units (CHWX). Where fittings are involved, these items must be shown in the design drawing in order that the associated fire-resistance rating can be considered appropriate.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector, and others concerned with the installation.

PRODUCT IDENTITY

- One of the following product identities appears on the product: Cellular Metal Floor Raceway Fitting, End Closure, Grommet

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Cellular Metal Floor Raceway (RHZX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 209, "Cellular Metal Floor Electrical Raceways and Fittings".

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Cellular Metal Floor Raceway Fittings (RINV)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Cellular Metal Floor Raceway Fitting Cover Assemblies Certified for Use with Specified Equipment (RIOJ)

USE AND INSTALLATION

This category covers certified cellular metal floor raceway fitting cover assemblies certified for use with specified certified cellular metal floor raceway fittings (see Cellular Metal Floor Raceway Fittings [RINV]), and certified cellular metal floor raceway fittings certified for use with specified certified cellular metal floor raceway fitting cover assemblies, in accordance with the details described under UL MARK below.

Cellular metal floor raceway fitting cover assemblies may be factory constructed or consist of field-assembled components. Each component of a field-assembled raceway cover assembly is marked to identify its relation to the other components of the raceway.

Certified cellular metal floor raceway fittings have fire-resistance ratings, as used in building construction, only when assembled in the manner described in the designs covered under Steel Floor and Form Units (CHWX). Where fittings are involved, these items must be shown in the design drawing in order that the associated fire-resistance rating can be considered appropriate.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector, and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 209, "Cellular Metal Floor Raceway and Fittings."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

ALSO CERTIFIED FOR USE WITH UL-CERTIFIED CELLULAR METAL FLOOR RACEWAY FITTINGS CATALOG NO. ____, [Listee's name]

or

ALSO CERTIFIED FOR USE WITH UL-CERTIFIED CELLULAR METAL FLOOR RACEWAY FITTING COVER ASSEMBLIES CATALOG NO. ____, [Listee's name]

Alternate UL Mark

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the complete Listing Mark for Cellular Metal Floor Raceway Fittings (RINV) and the following additional information:

ALSO CLASSIFIED BY UNDERWRITERS LABORATORIES INC. FOR USE WITH UL LISTED * CATALOG NO. _____ [LISTEE'S NAME]

* CELLULAR METAL FLOOR RACEWAY FITTINGS or CELLULAR METAL FLOOR RACEWAY FITTING COVER ASSEMBLIES *****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STRUT-TYPE CHANNEL RACEWAY (RIUU)

USE

This category covers strut-type channel raceway for installation in dry locations only in accordance with Article 384 of ANSI/NFPA 70, "National Electrical Code." This raceway is intended for installation and use in accordance with the following information.

RACEWAY (RGKT)

Strut-type Channel Raceway (RIUU)—Continued

PRODUCT MARKINGS

The number, type and size of conductors which may be installed in the certified raceway is marked on the raceway, on the installation instruction sheet or on the package in which it is shipped.

Raceway for use with lighting fixtures and/or other devices is marked to this effect on the raceway or on the package in which it is shipped.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Strut-type Channel Raceway
- Strut-type Channel Raceway Base
- Strut-type Channel Raceway Closure Strip

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5B, "Strut-Type Channel Raceways and Fittings."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark is applied to each length or package of complete raceway, raceway closure strip (cover) or raceway base.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Strut-Type Channel Raceway," "Strut-Type Channel Raceway Base" or "Strut-Type Channel Raceway Closure Strip."

The Listing Mark is applied to each length or package of complete raceway, raceway closure strip (cover) or raceway base.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Strut-type Channel Raceway Fittings (RIYG)

USE

This category covers fittings, such as adapters, boxes, elbows and tees, intended for use with the same manufacturer's strut-type channel raceway. These fittings are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code," and the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Strut-type Channel Raceway (RIUU).

PRODUCT MARKINGS

A fitting for supporting a fixture is marked "Suitable for a fixture not exceeding ___ kg (lb)." The specified fixture weight should not exceed 22.7 kg (50 lb). The marking is readily visible after the fitting has been mounted.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Elbow
- Strut-type Channel Raceway Fitting
- Tee

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Strut-type Channel Raceway (RIYG) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5B, "Strut-Type Channel Raceways and Fittings."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Strut-Type Channel Raceway Fitting," "Elbow" or "Tee," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE METAL RACEWAY (RJBT)

USE

This category covers surface metal raceway intended for installation in accordance with Article 386 of ANSI/NFPA 70, "National Electrical Code" (NEC). This raceway is intended for installation and use in accordance with the following information.

GROUNDING

Surface metal raceway is considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with the NEC.

PRODUCT MARKINGS

The number, type and size of conductors which may be installed in the certified raceway is marked on the raceway, on the installation instruction sheet or on the package in which it is shipped.

Raceway for use with lighting fixtures and/or other devices is marked to this effect on the raceway or on the package in which it is shipped.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Surface Metal Raceway
- Surface Metal Raceway Base for Use with Labeled Raceway Cover
- Surface Metal Raceway Cover for Use with Labeled Raceway Base

RELATED PRODUCTS

Some luminaires covered under Fluorescent Surface-mounted Luminaires (IEUZ) are suitable for use as raceways.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5, "Surface Metal Raceways and Fittings."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Metal Raceway," "Surface Metal Raceway Base for Use with Labeled Raceway Cover" or "Surface Metal Raceway Cover for Use with Labeled Raceway Base."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Surface Metal Raceway Fittings (RJPR)

USE

This category covers surface metal raceway fittings intended for installation in accordance with the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Surface Metal Raceway (RJBT).

GROUNDING

Surface Metal Raceway Fittings (RJPR)—Continued

Surface metal raceway fittings are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

A fitting for supporting a fixture is marked "Suitable for a fixture not exceeding ____ kg (lb)." The specified fixture weight should not exceed 22.7 kg (50 lb). The marking is readily visible after the fitting has been mounted.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Hanger
- Side Feed
- Surface Metal Raceway Fitting

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Surface Metal Raceway (RJBT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5, "Surface Metal Raceways and Fittings."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Metal Raceways Fitting," "Hanger" or "Side Feed," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE NONMETALLIC RACEWAY (RJTX)

USE

This category covers surface nonmetallic raceway intended for installation in accordance with Article 388 of ANSI/NFPA 70, "National Electrical Code." This raceway is intended for installation and use in accordance with the following information.

PRODUCT MARKINGS

The number, type and size of conductors which may be installed in the certified raceway is marked on the raceway, on the installation instruction sheet or on the package in which it is shipped.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Surface Nonmetallic Raceway
- Surface Nonmetallic Raceway Base for Use with Labeled Raceway Cover
- Surface Nonmetallic Raceway Cover for Use with Labeled Raceway Base

RELATED PRODUCTS

Some luminaires covered under Fluorescent Surface-mounted Luminaires (IEUZ) are suitable for use as raceway.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark is applied to each length or package of complete raceway, raceway cover or raceway base.

Surface Nonmetallic Raceway (RJTX)—Continued

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Nonmetallic Raceway," "Surface Nonmetallic Raceway Base for Use with Labeled Raceway Cover" or "Surface Nonmetallic Raceway Cover for Use with Labeled Raceway Base."

The Listing Mark is applied to each length or package of complete raceway, raceway cover or raceway base.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Surface Nonmetallic Raceway Fittings (RJYT)

USE

This category covers surface nonmetallic raceway fittings intended for installation in accordance with the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Surface Nonmetallic Raceway (RJTX).

PRODUCT MARKINGS

A fitting for supporting a fixture is marked "Suitable for a fixture not exceeding ____ kg (lb)." The specified fixture weight should not exceed 22.7 kg (lb). The marking is readily visible after the fitting has been mounted.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Butt Joint Cover
- End Cap
- Surface Nonmetallic Raceway Fitting

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Surface Nonmetallic Raceway (RJTX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Nonmetallic Raceway Fitting," "Butt Joint Cover" or "End Cap," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE RACEWAY TRANSITION FITTINGS CERTIFIED FOR USE WITH SPECIFIED PRODUCTS (RKBA)

USE AND INSTALLATION

This category covers surface metal raceway transition fittings certified for use with specific certified surface metal raceway, in accordance with the product installation instructions provided with the product and the details described in the Certification Mark below. Transition fittings are intended only for use in transitioning from (connecting together) the certified company's certified raceway to another company's certified raceway.

RACEWAY (RGKT)

Surface Raceway Transition Fittings Certified for Use with Specified Products (RKBA)—Continued

Installation instructions are provided with the smallest unit container. These instructions indicate the method of mounting and securing the fitting to raceway sections, and include a scale drawing of the raceway, including identification of the raceway material, and provide instructions on the means by which the fitting is intended to be connected. The fitting, smallest unit container or installation instructions are marked with the maximum number, type and size of insulated conductors for which it is intended.

PRODUCT IDENTITY

The following product identity appears on the product:
Surface Raceway Transition Fitting

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5, "Surface Metal Raceways and Fittings."

UL MARK

The Certification Mark of UL on the product and on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR USE WITH SURFACE METAL RACEWAY UL-CERTIFIED

[certified model or catalog number]

MANUFACTURED BY [Company name]

Alternate UL Mark

The Classification Mark of UL on the product and on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**SURFACE RACEWAY TRANSITION FITTING
FOR USE WITH SURFACE METAL RACEWAY UL LISTED +
MANUFACTURED BY [COMPANY NAME]**

Control No.

+ Appropriate Listed model or catalog number

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNDERFLOOR RACEWAY (RKCZ)

USE

This category covers metal underfloor duct systems designed for use as raceway for the installation of wire and cable in accordance with Article 390 of ANSI/NFPA 70, "National Electrical Code," and the manufacturer's installation instructions. This raceway is intended for installation and use in accordance with the following information.

The raceway may consist of factory-constructed raceway or field-assembled components forming a raceway. Each component is provided with installation instructions to identify its relation to the other components of the raceway.

PRODUCT IDENTITY

The following product identity appears on the product:
Underfloor Raceway

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 884, "Underfloor Raceways and Fittings."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

RACEWAY (RGKT)

Underfloor Raceway (RKCZ)—Continued

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Underfloor Raceway."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Underfloor Raceway Fittings (RKQX)

USE

This category covers underfloor raceway fittings for installation in underfloor raceway systems in accordance with the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Underfloor Raceway (RKCZ).

Each component is provided with installation instructions to identify its relation to the other components of the raceway system.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Raceway Adapter
- Saddle Support
- Underfloor Raceway Fitting

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Underfloor Raceway (RKCZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 884, "Underfloor Raceways and Fittings."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Underfloor Raceway Fitting," "Raceway Adapter" or "Saddle Support," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO DEVICES FOR USE IN HAZARDOUS LOCATIONS (RMGR)

GENERAL

This category covers portable signal receivers, portable signal and voice receivers, and portable voice transceivers.

REBUILT PRODUCTS

This category also covers radio devices and their accessories that are rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt radio devices and their accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt radio devices and their accessories are subject to the same requirements as new radio devices and their accessories.

PRODUCT IDENTITY

The following product identity appears on the product:
Radio Device for Use in Hazardous Locations

PRODUCT CATEGORIES BY CATEGORY CODE

RADIO DEVICES FOR USE IN HAZARDOUS LOCATIONS (RMGR)

The words "Radio Device" may be abbreviated "Rad. Dev." The words "Hazardous Locations" may be abbreviated "Haz. Loc." For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished," "Repaired" or "Reconditioned" precedes the product identity.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product, or the Certification Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Radio Device for Use in Hazardous Locations" (or "RAD DEV for Use in Hazardous Locations" or "RAD DEV for Use in HAZ LOC").

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished," "Repaired" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO DEVICES, REBUILT FOR USE IN HAZARDOUS LOCATIONS (RMGZ)

USE

This category covers rebuilt portable signal receivers, portable signal and voice receivers and portable voice transceivers. These products are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt products are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt products are subject to the same requirements as new products.

PRODUCT MARKINGS

These products are marked with the following:

The month and year that the product was repaired or rebuilt.

The standard number and edition to which the product was rebuilt, as referenced under **REQUIREMENTS** below.

PRODUCT IDENTITY

The following product identity appears on the product:

Rebuilt Radio Device for Use in Hazardous Locations

Repaired Radio Device for Use in Hazardous Locations

The words "Radio Device" may be abbreviated "Rad. Dev."

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

RELATED PRODUCTS

See Radio Devices for Use in Hazardous Locations (RMGR).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II, and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are one of the following as appropriate:

ANSI/UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations" (5th ed.)

ANSI/UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations" (6th ed.)

ANSI/UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations" (7th ed.)

UL 1604, "Electrical Equipment for Use in Class I and II, Division 2, and Class III Hazardous (Classified) Locations" (3rd ed.)

ANSI/ISA-12.12.01 (2000), "Nonincendive Electrical Equipment for Use in Class I and II, Division 2 and Class III, Divisions 1 and 2 Hazardous (Classified) Locations"

RADIO DEVICES, REBUILT FOR USE IN HAZARDOUS LOCATIONS (RMGZ)

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rebuilt Radio Device for Use in Hazardous Locations" (or "Rebuilt RAD DEV for Use in Hazardous Locations" or "Rebuilt RAD DEV for HAZ LOC") or "Repaired Radio Device for Use in Hazardous Locations" (or "Repaired RAD DEV for Use in Hazardous Locations" or "Repaired RAD DEV for HAZ LOC").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO DEVICES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RMJA)

GENERAL

This category covers portable signal receivers, portable signal and voice receivers, and portable voice transceivers.

PRODUCT IDENTITY

The following product identity appears on the product:

Radio Device for Use in Hazardous Locations

The words "Radio Device" may be abbreviated "Rad Dev."

The words "Hazardous Locations" may be abbreviated "Haz Loc."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product, or the Certification Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Radio Device for Use in Hazardous Locations" (or "RAD DEV for Use in Hazardous Locations" or "RAD DEV for Use in HAZ LOC").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO HEAD CABLE (RMJH)

USE

This category covers insulated multiple-conductor 60, 300 or 600 V radio head cable rated 60, 75 or 90°C (140, 167 or 194°F) dry, and 60, 75 or 90°C (140, 167 or 194°F) wet, for supplying power, data and signal from a base station to remote radio heads on a tower or rooftop in the size range of 18 – 4 AWG.

This category does not cover cable intended for direct installation in buildings or structures in accordance with ANSI/NFPA 70, "National Electrical Code."

RADIO HEAD CABLE (RMJH)

PRODUCT MARKINGS

Wire and cable marked "CT Use" or "For use in cable trays" complies with the Vertical-Tray Flame Test.

Wire and cable marked "FT4" or "FT4/IEEE 1202" complies with the FT4/IEEE 1202 type of flame exposure.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Radio Head Cable
RHC

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 2882, "Outline of Investigation for Radio Head Cable."

UL MARK

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE CLOSURES (RQYF)

GENERAL

This category covers receptacle closures for use with receptacles of ANSI/NEMA WD 6 (1997), "Wiring Devices – Dimensional Specifications," configurations 1-15R and 5-15R. Receptacle closures are products molded of insulating material that are intended to be used with a receptacle to cover the outlet slots a) to reduce drafts through a receptacle on an outside wall of a dwelling, or b) to restrict a child's access to energized contacts.

Receptacle closures that are intended to reduce drafts through a receptacle on an outside wall of a dwelling and that are not intended to restrict a child's access to energized contacts are packaged together with an insulating gasket to be fitted behind the receptacle cover plate. The packaging of such closures are marked to indicate their intended use.

Receptacle closures that are intended to restrict a child's access to energized contacts are not a substitute for adult supervision. The packaging of such closures contains a cautionary marking to this effect.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Closure
Receptacle Closure

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2255, "Receptacle Closures."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Closure" or "Receptacle Closure" or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS (RRAT)

RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS (RRAT)

RECEPTACLE-ENCLOSURE COMBINATIONS WITH PLUGS FOR USE IN HAZARDOUS LOCATIONS (RREG)

GENERAL

This category covers receptacle-enclosure combinations with plugs, which are intended for use in one or more of the following hazardous (classified) locations, as indicated on the product, in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC): Class I, Groups A, B, C and D; Class II, Groups E, F and G.

These products are (1) completely assembled at the factory, or (2) intended for final assembly in the field using components specified in the product certification. Assembly of the receptacle-enclosure combinations with plugs in the field is intended to be in accordance with the instructions provided with the product by the manufacturer.

The enclosures covered under this category are for threaded rigid conduit connection, and the conductors between the receptacle and the enclosure are factory sealed. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

The flexible cord connecting to the plugs should be frequently inspected and replaced when necessary. Terminal connection to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at the current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to the conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

Receptacle-enclosure combinations with plugs certified for Class II, Group F locations are intended for use only in atmospheres containing electrically nonconductive dusts, as defined in Article 500 of the NEC.

PRODUCT IDENTITY

The following product identity appears on the product:
Receptacle-Enclosure Combination with Plug for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO EXPLOSION AND FIRE HAZARDS ONLY

CLASS ____, GROUP ____

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RECEPTACLE-ENCLOSURE COMBINATION WITH PLUG

FOR USE IN HAZARDOUS LOCATIONS

AS TO EXPLOSION AND FIRE HAZARD ONLY

CLASS ____, GROUP ____

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRODUCT CATEGORIES BY CATEGORY CODE

RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS (RRAT)

RECEPTACLE-PLUG COMBINATION ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (RRHS)

GENERAL

This category covers receptacles intended for use only with certified plugs, and plugs intended for use only with certified receptacles, as specified in the instructions provided with the product. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which plugs and receptacles will be permitted for use. It is recognized that portable equipment should be used only where necessary.

Receptacles and plugs certified for use in Class II, Group F locations are for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Plug for Use in Hazardous Locations
- Receptacle for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

FOR USE WITH RECEPTACLE SPECIFIED IN THE INSTRUCTIONS PROVIDED WITH THE PRODUCT

or

FOR USE WITH PLUG SPECIFIED IN THE INSTRUCTIONS PROVIDED WITH THE PRODUCT

Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]

FOR USE WITH LISTED * SPECIFIED IN THE INSTRUCTIONS PROVIDED WITH THE PRODUCT Control No.

*** RECEPTACLE or PLUG**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES WITH PLUGS FOR USE IN HAZARDOUS LOCATIONS (RROR)

GENERAL

This category covers receptacles with plugs for use as follows:

Receptacles with plugs certified under Class I and Class II groups for Division 1 locations are provided with receptacle conduit boxes for threaded rigid conduit connection, and the conductors between receptacles and conduit boxes are factory sealed. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

Receptacles certified for Class I, Division 2 locations only are intended for use with general-purpose enclosures for supply connections. The supply conductors are factory sealed in the receptacles. The plugs for use with such receptacles are suitable for Class I, Division 1 locations.

Receptacles with plugs for groups under Class I hazardous locations have been subjected to endurance tests and overload operation tests in the presence of the specific flammable vapor-air atmospheres.

RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS (RRAT)

Receptacles with Plugs for Use in Hazardous Locations (RROR)—Continued

Receptacles with plugs for any of the groups under Class II hazardous locations have dust-tight terminal boxes and have been subjected to endurance tests and overload operation tests while heavily blanketed with combustible dust. Receptacles with plugs certified for Class II, Group F locations are intended for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Some receptacles and plugs are certified for "Reverse Service" applications on marine vessels, for conformity to the installation and use provisions of the United States Coast Guard (USCG) Electrical Engineering Regulations 46CFR110, "General Provisions," 46CFR111, "Electric Systems - General Requirements," 46CFR112, "Emergency Lighting and Power Systems," and 46CFR113, "Communication and Alarm Systems and Equipment," as identified in the individual certifications and marked on the product. Reverse-service plugs and receptacles are not suitable for applications other than those governed by the above USCG regulations.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Plug for Use in Hazardous Locations
- Receptacle Assembly for Use in Hazardous Locations
- Reverse-service Plug for Use in Hazardous Locations
- Reverse-service Receptacle for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Plug for Hazardous Locations," "Receptacle Assembly for Hazardous Locations," "Reverse Service Plug for Hazardous Locations" or "Reverse Service Receptacle for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES WITH PLUGS INTERLOCKED WITH CIRCUIT BREAKERS FOR USE IN HAZARDOUS LOCATIONS (RSBZ)

GENERAL

This category covers receptacles with plugs interlocked with circuit breakers as follows:

Receptacles with plugs interlocked with circuit breakers certified under Class I and Class II groups are constructed with an interlocked circuit breaker and plug so that the plug cannot be withdrawn or inserted when the circuit breaker is closed. These devices have provision for connection of threaded rigid conduit to the circuit breaker compartments and the plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

Receptacles with plugs interlocked with circuit breakers certified for Class II, Group F locations are intended for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS (RRAT)

Receptacles with Plugs Interlocked with Circuit Breakers for Use in Hazardous Locations (RSBZ)—Continued

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plugs and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Receptacle Interlocked with Circuit Breaker for Hazardous Locations" or "Plug for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES WITH PLUGS INTERLOCKED WITH SWITCHES FOR USE IN HAZARDOUS LOCATIONS (RSPX)

GENERAL

This category covers receptacles that are (1) completely assembled at the factory or (2) intended for final assembly in the field using components specified in the individual certifications. Final assembly of receptacles in the field is intended to be done in accordance with instructions provided with the product by the manufacturer.

Receptacles with plugs interlocked with switches certified under Class I and Class II groups are constructed with an interlocked switch and plug so that the plug cannot be withdrawn or inserted when the switch is closed. These devices have provision for connection of threaded rigid metal conduit to the switch compartments. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

Receptacles with plugs interlocked with switches certified for Class II, Group F locations are intended for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

Devices that are provided with a factory seal of conductors between the switch and the conduit box are so identified on the individual products.

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

RECEPTACLE-PLUG COMBINATIONS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RSUN)

RECEPTACLES WITH PLUGS INTERLOCKED WITH SWITCHES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RSZD)

USE

This category covers receptacles that are (1) completely assembled at the factory, or (2) intended for final assembly in the field using components specified in the individual certifications. Final assembly of receptacles in the field is intended to be done in accordance with instructions provided with the product by the manufacturer. Care should be taken to ensure that minimum IP ratings are maintained for field-assembled increased safety enclosures.

Receptacles with plugs interlocked with switches are constructed with an interlocked switch and plug so that the plug cannot be withdrawn or inserted when the switch is closed. These devices have provision for connection of threaded rigid metal conduit or other suitable wiring method to the switch compartments. The plugs are for use with Type S, SO, ST or STO flexible cord having a grounding conductor.

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices are permitted for use. Portable equipment should be used only where necessary.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Body Assembly for Use in Hazardous Locations
 - Plug for Use in Hazardous Locations
 - Receptacle Cover Assembly Interlocked with Switch for Use in Hazardous Locations
 - Receptacle Interlocked with Switch for Use in Hazardous Locations
 - Other product identities may be used as shown in the individual certifications.

PRODUCT CATEGORIES BY CATEGORY CODE

RECEPTACLE-PLUG COMBINATIONS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RSUN)

Receptacles with Plugs Interlocked with Switches for Use in Zone Classified Hazardous Locations (RSZD)—Continued

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 1682, "Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Receptacle Interlocked with Switch for Hazardous Locations," "Plug for Hazardous Locations," "Receptacle Cover Assembly Interlocked with Switch for Hazardous Locations," "Body Assembly for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES (RTDV)

GENERAL

This category covers the following attachment plug products: 1) receptacles for plugs and attachment plugs, 2) stage-type receptacles, 3) combination receptacles with switches, and 4) utility service receptacles.

The above products include the following:

Appliance, Equipment or Fixture Outlet — A female contact device for mounting on utilization equipment.

Receptacle — A female contact device intended to be installed on a wiring system to supply current to utilization equipment.

This category may also cover the following types of products of a non-standard configuration blade or slot configuration type, which are part of a manufacturer's line of wiring devices, including receptacles. Other similar devices are covered under Attachment Plugs, Fuseless (AXUT), Attachment Plugs with Switches (AYIR) and Attachment Plugs with Overload Protection (AYVZ).

Attachment Plug — A male contact device for the temporary connection of a flexible cord or cable to a receptacle, cord connector, or other female outlet device.

Cord Connector — A female contact device intended to be wired on flexible cord for use as an extension from an outlet to make a detachable electrical connection to an attachment plug or, as an appliance coupler, to a male inlet.

Male Inlet (Equipment Inlet, Motor Attachment Plug) — A male contact device intended to be mounted on utilization equipment to provide a detachable electrical connection to an appliance coupler or cord connector.

This category does not cover devices intended to be molded on flexible cord or wire, or unassembled devices intended to be factory assembled on flexible cord or wire. Such devices are complete only after installation of the flexible cord or wire and are investigated as part of a complete assembly.

RATINGS

These devices are rated 600 V or less, ac or dc; and 200 A or less. They may also be rated in horsepower as noted in the individual product categories.

Devices rated 250 V are tested on circuits involving a nominal potential to ground of 125 V. Devices having other voltage ratings are tested on circuits involving full rated potential to ground, except for multiphase rated devices, which are tested on circuits consistent with their voltage ratings (e.g., a 120/208 V, 3-phase device is tested on a circuit involving 120 V to ground).

Devices marked "Not for Current Interruption" are not intended to be disconnected while under load. They are intended to be installed in series with switches or other appropriate disconnecting means.

TERMINALS

The terminations of devices intended to be wired to flexible cord are based on the use of flexible cord or cable having copper conductors, in

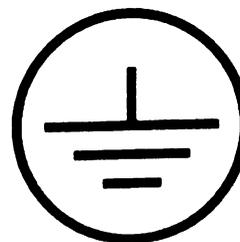

RECEPTACLES (RTDV)

accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). The ampacity of the flexible cord and cable is based on Section 400.5, Tables 400.5(A) and 400.5(B). The conductors are sized as specified on the product or in the manufacturer's instructions provided with the device. The terminations are based on the use of 60°C flexible cord or cable.

Unless stated otherwise in the individual product categories, the termination provisions of all other devices are based upon the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in circuits rated more than 100 A, as specified in Table 310.15(B)(16) of the NEC.

GROUNDING

Devices having a terminal identified by a green-colored finish, the words "Green" or "Ground" (or the letters "G" or "GR"), or the symbol with or without the circle are grounding types. The blade, pin or contact member

connected to this terminal is for equipment grounding only.

ENCLOSURES

In general, devices having integral enclosures or installed as intended have been investigated for use indoors, in dry locations. All such certified products provide a degree of protection against ordinary corrosion, accidental contact with live parts, and a limited amount of falling dirt. Some devices have been investigated for use in other operating environments when unmated and when mated with other devices in the same manufacturer's line of products. They are marked with one of the type designations 2 through 6, 12 and 13 indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). All outdoor types provide a degree of protection against rain, snow and sleet. Outdoor types are also suitable for use indoors if they meet the environmental conditions present. A device that complies with the requirements for more than one type of enclosure may be marked with multiple designations. Complete use and mating information is provided in the installation instructions provided with each device.

WET AND DAMP LOCATIONS

Receptacles provided with integral outlet box covers or cover plates for flush-mounted wiring devices may be identified for use in damp or wet locations as defined in the NEC. If the cover provides protection only when it is closed, the combination is marked "Wet Location When Cover Closed" and may be marked "Damp Location."

RELATED PRODUCTS

This category does not cover pin-and-sleeve-type devices; see Attachment Plugs, Pin-and-Sleeve Type (QLHN) and Receptacles, Pin-and-Sleeve Type (QLIW).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES FOR PLUGS AND ATTACHMENT PLUGS (RTRT)

GENERAL

This category covers general-use receptacles for use in wiring systems recognized by ANSI/NFPA 70, "National Electrical Code" (NEC), and outlets for use in appliances and fixtures. It also covers some attachment plugs, male inlets, and cord connectors with nonstandard slot or blade configurations which are part of a line of wiring devices including receptacles. Other similar attachment-plug devices are covered under Attachment Plugs (AXGV).

PRODUCT TYPES

Flush Receptacles — Flush receptacles are intended for mounting in or on an outlet box, an outlet-box cover or a cover plate for flush-mounted wiring devices for fixed installation on a branch circuit. They are not intended to be field mounted on outlet-box covers solely by the center cover-plate screw. They may be employed in damp and wet locations when installed in an appropriate enclosure. See Metallic Outlet Boxes (QCIT) and Nonmetallic Outlet Boxes (QCMZ) for information on outlet boxes and covers suitable for use in damp and wet locations.

Self-grounding Receptacles — Self-grounding receptacles have special integral means for establishing the grounding circuit between device yokes and (1) the grounded metallic flush-type boxes, or (2) the grounded nonmetallic flush-device boxes employing a grounding strap and terminal; without

Receptacles for Plugs and Attachment Plugs (RTRT)–Continued

the use of bonding jumpers as permitted by Section 250.146(B) (formerly Exception No. 2 to Section 250-74) of the NEC. These devices are identified by the statement: “This receptacle is Listed by Underwriters Laboratories Inc. and has a special pressure spring clip to establish the grounding circuit between device yokes and (1) the grounded metallic flush-type boxes, or (2) the grounded nonmetallic flush device boxes employing a grounding strap and terminal; without the use of bonding jumpers as permitted by Section 250.146(B) of the National Electrical Code” (or equivalent wording), which may appear on the device or shipping carton.

Isolated Ground Receptacles — Grounding-type receptacles in which the grounding terminals are purposely insulated from the mounting means of receptacles and associated metal cover plates as permitted by Section 250.146(D) (formerly Exception No. 4 to Section 250-74) of the NEC are so identified by an orange triangle marked on the face of the receptacle.

Receptacles for Use in Hospitals — Receptacles for hospital use in other than hazardous (classified) locations in accordance with Article 517 of the NEC are identified (1) by the marking “Hospital Only” (used to identify a specific grounding locking configuration rated 20 A, 125 V used for the connection of mobile x-ray and similar equipment), or (2) by the marking “Hospital Grade” and a green dot on the face of the receptacle. The identification is visible during installation on the wiring system or, in the case of the appliance outlet, after installation on the utilization equipment.

Tamper-resistant Receptacles — Receptacles for use in dwelling units in accordance with the NEC, specifically, Section 406.12, or pediatric patient care areas in accordance with Article 517 of the NEC. Tamper-resistant receptacles are identified by the words “Tamper Resistant” (or the letters “TR”) where they will be visible after installation with the cover plate removed. Tamper-resistant receptacles may be of the general grade, hospital grade or isolated ground type.

Self-contained Receptacles — Self-contained receptacles include an enclosure and mounting means intended for flush mounting without the use of a separate flush device or other outlet box. They are intended for use with Types NM and NMC cable in accordance with the NEC, specifically, Sections 300.15(E), 334.40(C), 545.10, 550.15(I) Exception, 551.47(E) Exception No. 1 and 552.48(E) Exception No. 1, and are so identified by specific markings on the carton in which they are packed. Devices employing insulation-displacement terminals are intended for assembly with specific installation tools only. Reference must be made to the installation instructions regarding the proper tool and the number of cables (per entry) with which the devices are intended to be used.

Surface Receptacles — Surface receptacles include an enclosure and mounting means for surface mounting without the use of a separate outlet box. They are intended for connection to exposed nonmetallic-sheathed cable as permitted by Article 336 of the NEC. Some may also accept other wiring systems. Surface receptacles rated 50 A that employ enclosures of insulating materials are not intended for use in applications where they are likely to be subject to severe mechanical abuse.

Pendant Receptacles — Pendant receptacles include an enclosure with cover plate and strain-relief means, intended to be assembled at the end of flexible cord, for use in branch-circuit applications.

Display Receptacles — Display receptacles are provided with a cover plate for flush-mounted wiring devices or outlet-box cover and closure plug or plugs. They are intended for use in show window floors and similar locations where the device is not likely to be subjected to scrub water. They are not intended to be used as substitutes for floor boxes, which are covered under Metallic Outlet Boxes (QCIT) and Nonmetallic Outlet Boxes (QCMZ).

Weather-resistant Receptacles — Receptacles for use in wet and damp locations in accordance with Article 406 of the NEC. Weather-resistant receptacles are identified by the words “Weather Resistant” (or the letters “WR”) where they will be visible after installation with the cover plate secured as intended.

Interchangeable (Modular) Receptacles — Interchangeable receptacles are flush receptacles that are assembled as single, duplex or triplex outlets in the field from a system of individual outlet modules, mounting yokes, and/or cover plates for flush-mounted wiring devices.

Appliance, Equipment and Fixture Outlets — When an outlet is installed in equipment with a conductive mounting surface, the face of the receptacle should project a minimum of 3/32 in. and a maximum of 3/16 in. from the mounting surface.

A receptacle employing an integral thermal-interruption mechanism is not intended for hospital locations or other locations where critical patient care equipment is used. Additionally, a receptacle employing an integral thermal-interruption mechanism has not been investigated for its ability to reduce the safety hazards caused by overheating and overloaded circuits.

A receptacle employing an integral thermal-interruption mechanism has been investigated to confirm the manufacturer’s stated thermal-interruption temperature range.

Receptacles for Plugs and Attachment Plugs (RTRT)–Continued

Receptacle Providing Power to Class 2 Equipment — A flush-mounted receptacle with an integral power supply with one or more Class 2 output low-voltage connectors, a Class 2 separable conductor lead assembly, or both, intended to be installed in an outlet box.

Federal Specification — Some receptacles in this category have been investigated to Federal Specification W-C-596, “General Specification for Electrical Power Connectors.”

TERMINALS

Terminals of 15 and 20 A receptacles not marked “CO/ALR” are for use with copper and copper-clad aluminum conductors only. Terminals marked “CO/ALR” are for use with aluminum, copper and copper-clad aluminum conductors.

Terminals of receptacles rated 30 A and above not marked “AL-CU” are for use with copper conductors only. Terminals of receptacles rated 30 A and above marked “AL-CU” are for use with aluminum, copper and copper-clad aluminum conductors.

Terminals marked “75 C” may be wired using the ampacities for conductors rated 75°C as well as conductors rated 60°C in Table 310.15(B)(16) of the NEC.

Terminals of the wire-binding screw, setscrew, or screw-actuated back-wired clamping types are suitable for use with both solid and stranded building wires.

Terminals of a receptacle are permitted for use with certified field-installed crimped-on wire connectors or an assembly, if so identified by the manufacturer.

A receptacle may also be provided with conductor leads with factory-installed crimped-on connectors. Such connectors may be either attached to the receptacle terminal or are provided with the receptacle in the smallest unit shipping container and are suitable for use with the terminal of the receptacle.

Screwless terminal connectors of the conductor push-in type (also known as “push-in-terminals”) are restricted to 15 A branch circuits and are for connection with 14 AWG solid copper wire only. They are not intended for use with aluminum or copper-clad aluminum wire, 14 AWG stranded copper wire, or 12 AWG solid or stranded copper wire.

Single and duplex receptacles rated 15 and 20 A that are provided with more than one set of terminals for the connection of line and neutral conductors have been investigated to feed branch-circuit conductors connected to other outlets on a multi-outlet branch circuit, as follows:

- Back-wire (screw-actuated clamp type) terminations with multiple wire-access holes used concurrently to terminate more than one conductor
- Side-wire (binding screw) terminals used concurrently with their respective push-in (screwless) terminations to terminate more than one conductor

Single and duplex receptacles rated 15 and 20 A that are provided with more than one set of terminals for the connection of line and neutral conductors have not been investigated to feed branch-circuit conductors connected to other outlets on a multi-outlet branch circuit, as follows:

- Side-wire (binding screw) terminal with its associated back-wire (screw-actuated clamp type) terminal
- Multiple conductors under a single binding screw
- Multiple conductors in a single back-wire hole

Duplex receptacles rated 15 and 20 A that are provided with break-off tabs may have those tabs removed so that the two receptacles may be wired in a multi-wire branch circuit or multiple branch circuits.

HORSEPOWER RATINGS

In addition to ampere and voltage ratings, standard AC horsepower ratings corresponding to the ampere and voltage ratings for specific general-use receptacles not incorporating overcurrent protection or a switch are given in the table below. For a Design E motor rated more than 2 horsepower, it is necessary to use a receptacle having a horsepower rating not less than 1.4 times the standard AC horsepower rating. The NEMA configuration designation is included for reference. Devices of configurations other than those indicated in the table have horsepower ratings only if such ratings are marked on the device.

HORSEPOWER RATINGS FOR NEMA CONFIGURATION RECEPTACLES

	250	3	3	4	15-60	10
	120/208	3	4	4	18-60	7-1/2

L-L#: Motor connected line-to-line
L-N: Motor connected line-to-neutral

#: Also suitable for 208 V motor applications at the indicated horsepower rating

For three-phase devices, the horsepower ratings indicated are for three-phase motor loads.

Refer to ANSI/NEMA WD 6 (2002), "Wiring Devices – Dimensional Specifications," for configurations of the NEMA designations.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Attachment Plug
- Attachment Plug with Overload Protection
- Fuseless Attachment Plug
- Plug
- Recept.
- Receptacle

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Receptacles (RTDV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

RECEPTACLES (RTDV)

Receptacles for Plugs and Attachment Plugs (RTRT)–Continued

The basic standard used to investigate products in this category is ANSI/UL 498, "Attachment Plugs and Receptacles."

Where indicated in the individual certifications, receptacles have additionally been investigated to Federal Specification W-C-596, "General Specification for Electrical Power Connectors."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Receptacles additionally investigated to Federal Specification W-C-596 are identified by the capital letters "F" and "S," each in a wing on either side of the UL symbol. The Federal Specification number "W-C-596F" or "W-C-596G," or the Federal Specification part number (which consists of the appropriate specification sheet and dash number described in the specification) may also be included on the product or on the smallest container in which the product is packaged.

Alternate UL Mark

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Attachment Plug," "Plug," "Receptacle" (or "Recept."), "Attachment Plug with Overload Protection," "Attachment Plug Fuseless," or other appropriate product name as shown in the individual Listings.

Receptacles additionally investigated to Federal Specification W-C-596 are identified by the capital letters "F" and "S," each in a wing on either side of the UL symbol. The Federal Specification number "W-C-596F" or "W-C-596G," or the Federal Specification part number (which consists of the appropriate specification sheet and dash number described in the specification) may also be included on the product or on the smallest container in which the product is packaged.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES WITH INTEGRAL SWITCHING MEANS (RTXI)

GENERAL

This category covers controlled receptacles with integral switching means, intended to be installed on a 20 A maximum branch circuit and for use in dry locations, in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). Controlled receptacles are intended for energy management and building automation applications in accordance with NEC Section 406(E).

RATINGS

Controlled receptacles are intended to control resistive, tungsten, LED and CFL lamps and motor loads as identified below:

ANSI/NEMA Config and Electrical Rating	Resistive, A	Tungsten, Watts (A) Min*	LED & CFL, A Min*	Motor, Hp
5-15 R 15 A, 125 V	15	1000 (8.3)	3.75	1/2
5-20 R 20 A, 125 V	20	1500 (12.5)	5.0	1
6-15 R 15 A, 250 V	15	—	—	1-1/2
6-20 R 20 A, 250 V	20	—	—	2

* Higher ratings for tungsten, LED and CFL are permissible and are so identified on the device.

PRODUCT MARKINGS

Receptacles with Integral Switching Means (RTXI)—Continued

Controlled receptacles are marked "UL 498B SA" or "UL 498B Supplement SA" on the device. The following symbol is additionally marked in a location where visible after installation (with cover plate installed):

PRODUCT IDENTITY

The following product identity appears on the product: Receptacle with Integral Switching Means

RELATED PRODUCTS

Devices intended to be part of a building control system are covered under Management Equipment, Energy (PAZX). Appliance controls, including receptacles with integral switching means, are covered under Appliance Controls (ATNZ).

ADDITIONAL INFORMATION

For additional information, see Receptacles (RTDV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 498B, "Outline of Investigation for Receptacles with Integral Switching Means."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES, STAGE TYPE (RUF R)

USE

This category covers attachment plugs, cord connectors, equipment outlets, male inlets and receptacles intended for use in theater and stage applications in accordance with Articles 520 and 530 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Connector
Plug
Stage-type Connector
Stage-type Plug

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Plug," "Connector," "Stage Type Plug," "Stage Type Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMBINATION RECEPTACLES WITH SWITCHES (RUSZ)

GENERAL

This category covers combination receptacle and switch devices on the same mounting yoke, intended for household, office and industrial applications.

These devices are marked as follows:

- a. Listee's name or identification on device
b. Catalog number or equivalent on device or carton
c. Complete electrical rating
d. Terminal identification
e. Date code
f. Additional markings as required in the Reports

PRODUCT IDENTITY

The following product identity appears on the product: Receptacle/Switch

RELATED PRODUCTS

See Snap Switches (WJQR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 498, "Attachment Plugs and Receptacles," and ANSI/UL 20, "General-Use Snap Switches."

UL MARK

The Certification Mark of UL on the product, or the UL symbol stamped or molded into the product and the Certification Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Certification Mark will appear on the smallest unit packaging.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Receptacle/Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SINGLE-POLE, LOCKING-TYPE SEPARABLE ATTACHMENT PLUGS, PANEL INLETS, PANEL OUTLETS, ADAPTERS AND ACCESSORIES (RUUS)

GENERAL

This category covers single-pole, locking-type separable attachment plugs, cord connectors, panel inlets, panel outlets, adapters and accessories, rated up to a maximum of 800 A and up to 600 V ac or dc. These devices are intended to provide power from feeders or branch circuits, or are for direct connection to feeders or branch circuits in accordance with ANSI/NFPA 70, "National Electrical Code."

These devices are not intended for use in hazardous (classified) locations.

Attachment plugs and cord connectors are intended for use with single-conductor cable, having copper conductors only.

Inlets and outlets are intended for use with single-conductor cable, having copper conductors only, or to copper busbars.

CURRENT INTERRUPTION

These devices are not intended for connection or disconnection under load conditions.

INTERMATEABILITY

Devices identified as Series 15, 16 or 18 are capable of being mated together between different Listees' lines of products. Devices that are not

PRODUCT CATEGORIES BY CATEGORY CODE

Single-pole, Locking-type Separable Attachment Plugs, Panel Inlets, Panel Outlets, Adapters and Accessories (RUUS)—Continued

identified as Series 15, 16 or 18 are only intended to mate with the Listee's same line of products covered under this category.

Refer to Annex B of ANSI/UL 1691, "Single Pole Locking-Type Separable Connectors," for Series 15, 16 and 18 configurations.

ENVIRONMENTAL RATING

Devices identified as Series 15, 16 or 18 have a minimum environmental enclosure rating of Type 3R when mated, and are marked accordingly. Devices identified other than Series 15, 16 or 18 have a minimum rating of Type 1 and are marked accordingly.

ELECTRICAL RATING

Devices identified as Series 15 are rated 150 A maximum, 600 V maximum.

Devices identified as Series 16 or 18 are rated 400 A maximum, 600 V maximum.

Devices identified other than Series 15, 16 or 18 are rated in ampere, voltage and frequency ac or ac/dc, or in maximum ampere, maximum voltage and frequency ac or ac/dc, and are so marked.

GROUNDED DEVICES

Devices designated for connection to the grounded circuit conductor are identified by a white-colored housing. The pin or contact member connected to this terminal is for the grounded conductor only.

Panel inlets and panel outlets designated for connection to the grounded circuit conductor are identified by either a white-colored housing or by housing surfaces colored white adjacent to both the grounded terminal and grounded pin or contact.

GROUNDING

Devices designated for connection to the grounding circuit conductor are identified by a green- or green/yellow-colored housing. The pin or contact member connected to this terminal is for the grounding conductor only.

Panel inlets and panel outlets designated for connection to the grounding circuit conductor are identified by either a green-colored housing or by housing surfaces colored green adjacent to both the grounding terminal and grounding pin or contact.

PRODUCT MARKINGS

These devices are marked with:

1. The Listee's name or identification
2. The electrical rating
3. The statement, "CAUTION – Risk of Electric Shock. Do Not Disconnect Under Load," or equivalent following the word "CAUTION"
4. Series 15, 16 or 18 configurations, if applicable
5. The environmental type rating(s)

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Attachment Plug
- Connector
- Fuseless Attachment Plug
- Plug
- Recept.
- Receptacle

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Receptacles (RTDV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1691, "Single Pole Locking-Type Separable Connectors."

UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Attachment Plug," "Fuseless Attachment Plug," "Plug," "Receptacle" (or "Recept."), "Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

Single-pole, Locking-type Separable Attachment Plugs, Panel Inlets, Panel Outlets, Adapters and Accessories (RUUS)—Continued

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UTILITY-SERVICE RECEPTACLES (RVNW)

GENERAL

This category covers utility-service receptacles having a unique, nonstandard contact configuration and utilizing the grounded neutral conductor of the supply as the equipment grounding conductor.

These receptacles are intended for mounting in a utility pole and for use in conjunction with a utility-service cord set (see Utility-service Cord Sets [ELFT]) only by authorized utility company personnel in obtaining temporary power from utility poles. They are rated as marked (e.g., 125 V, 15 A).

PRODUCT IDENTITY

The following product identity appears on the product:

Utility-service Receptacle

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498, "Attachment Plugs and Receptacles," with regard to protection from the risk of electrical shock and the ability to function without overheating.

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO PROTECTION FROM ELECTRIC SHOCK AND ABILITY TO FUNCTION WITHOUT OVERHEATING

Alternate UL Mark

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products which have been produced under its Classification and Follow-Up Service.

REELS, CORD FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (SAOD)

USE AND INSTALLATION

This category covers cord reels intended for use with extra-hard-usage cord, having a grounding conductor, for connecting portable electrical devices to supply lines. A terminal compartment is provided for connection to threaded rigid conduit systems. Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only when necessary.

The flexible cord should be inspected frequently and replaced when necessary. Terminal connections to the cord should be properly made and maintained.

PRODUCT IDENTITY

The following product identity appears on the product:

Cord Reel for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REELS, CORD FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (SAOD)

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 355, "Cord Reels."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REELS, CORD FOR USE IN HAZARDOUS LOCATIONS (SAOX)

GENERAL

This category covers cord reels for use with extra-hard-usage flexible cord, having a grounding conductor, for connecting portable electrical devices to supply lines. A terminal compartment is provided for connection to threaded rigid conduit systems.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

The flexible cord should be inspected frequently and replaced when necessary. Terminal connections to the cord should be properly made and maintained.

PRODUCT IDENTITY

The following product identity appears on the product: Cord Reel for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 355, "Cord Reels."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REELS, CORD AND CABLE (SBCV)

GENERAL

REELS, CORD AND CABLE (SBCV)

This category covers reels, usually spring-powered, to pay out and retract flexible cords and cables employed for supply of portable or mobile equipment.

Electrical ratings of reels are marked on the reels where readily visible. The electrical ratings for reels not supplied with cord are based upon the type, size, and length of cord or cable intended for use with the reel. The electrical ratings for reels complete with cord cover the complete assemblies.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Cable Reel
Cord Reel
Reel

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 355, "Cord Reels."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel," "Cable Reel" or "Reel."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION EQUIPMENT (SCER)

This category covers mechanical compression refrigeration systems and absorption-type refrigeration systems, including refrigerant-containing components and associated controls.

Some of this equipment may employ water to directly or indirectly cool the refrigerant condenser. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply and waste disposal lines.

In permanently-wired equipment employing two or more motors or a motor(s) and other loads operating from a single supply circuit, the motor overload protective devices (including thermal protectors for motors) and other factory-installed motor-circuit components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Sections 430.53(C) and 440.22 of ANSI/NFPA 70, "National Electrical Code" (NEC). Such multitempor and combination load equipment is intended to be connected to a branch circuit protected by overcurrent devices which do not exceed the value marked on the data plate or attached wiring diagram. This marked protective-device rating is the maximum for which the equipment has been investigated and found acceptable. If the marking specifies circuit breakers or overcurrent-protective devices, the equipment can be protected by fuses, "HACR Type" circuit breakers, or any properly-sized circuit breakers.

Cord-connected equipment that requires circuit breakers or time-delay fuses to permit restarting is marked to this effect.

Requirements for the installation of refrigeration and air-conditioning equipment that may be field converted/retrofitted to use an alternative refrigerant are contained in the NEC and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRODUCT CATEGORIES BY CATEGORY CODE

REFRIGERATION ACCESSORIES (SCSQ)**Controllers, Refrigeration (SDFY)****GENERAL**

This category covers electrical controls designed for refrigeration and air-conditioning equipment and for room temperature or humidity regulation. They are intended for household, commercial or industrial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

These devices respond directly or indirectly to changes in temperature, humidity, refrigerant level, or pressure to affect temperature control of equipment or appliance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

Ratings — Refrigeration controllers are certified with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a direct-current (noninductive) rating is specified.

Manual reset controls — An "M1" or "M2" marking indicates the following manual reset functions are provided:

- **M1** — Controls that automatically reset to the "closed" position after normal operating conditions have been restored if the reset means is held in the "reset" position.
- **M2** — Controls that do not automatically reset to the "closed" position if the reset means is held in the "reset" position.

Equipment suitable for outdoor use — Equipment identified with an enclosure type designation or as "Rain tight" or "Rainproof" is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Class 2 output circuits — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

PRODUCT MARKINGS

Refrigeration controllers are marked with the company name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

PRODUCT IDENTITY

The following product identity appears on the product:

Refrigeration Controller

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit (MBPR), Controls, Primary Safety (MCCZ) or Switches (MFHX). Refrigerant valves are covered under Valves, Electrically Operated (YIOZ).

Electrical temperature controls for heating equipment, motor operators, and wall-mounted room thermostats are covered under Temperature-indicating and -Regulating Equipment (XAPX).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 873, "Temperature-Indicating and Regulating Equipment," or UL 60730-1, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," in addition to one of the following as applicable:

ANSI/UL 60730-2-2, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Motor Protectors"

UL 60730-2-3, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Protectors for Ballasts for Tubular Fluorescent Lamps"

UL 60730-2-4, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Motor Protectors for Hermetic and Semi-Hermetic Motor-Compressors"

UL 60730-2-6, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls, Including Mechanical Requirements"

ANSI/UL 60730-2-9, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Temperature Sensing Controls"

UL 60730-2-10A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Motor Starting Relays"

UL 60730-2-13A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Humidity Sensing Controls"

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Controllers, Refrigeration (SDFY)—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigeration Controller," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BEVERAGE COOLERS AND BEVERAGE COOLER-DISPENSERS (SFWY)**GENERAL**

This category covers beverage coolers and beverage cooler-dispensers. Beverage coolers are intended to be connected to a field-installed dispensing means. Beverage cooler-dispensers include a factory-installed dispensing means. These products may be self-contained, sectional or remote. Accessories intended for use with beverage coolers and beverage cooler-dispensers are also covered under this category.

INSTALLATION

This equipment is rated 600 V ac or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

All units are marked with the refrigerant type; some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Listing Report available from the manufacturer identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 34 and have been determined to comply with ANSI/UL 2182, "Refrigerants."

A beverage cooler or beverage cooler-dispenser of other than the remote type consists of a completely factory assembled and factory tested refrigeration system comprising one or more assemblies which may be shipped separately but which are intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained beverage cooler or beverage cooler-dispenser consists of a completely factory assembled and factory tested refrigeration system in which all the refrigerant-containing parts are connected at the factory.

A remote beverage cooler or beverage cooler-dispenser is intended to be connected to a field-installed condenser or condensing unit located remote from the beverage cooler or beverage cooler-dispenser.

Accessories for beverage coolers and beverage cooler-dispensers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Beverage coolers and beverage cooler-dispensers may be designed to accept accessories installed in the field. In such cases both the beverage cooler or beverage cooler-dispenser and the accessory are marked to relate the two for proper installation.

A section of a beverage cooler or beverage cooler-dispenser suitable for outdoor use is so marked. Sections not so marked are for indoor use only.

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

REBUILT PRODUCTS

This category also covers beverage coolers and beverage cooler-dispensers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt beverage coolers and beverage cooler-dispensers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt beverage coolers and beverage cooler-dispensers are subject to the same requirements as new beverage coolers and beverage cooler-dispensers.

PRODUCT IDENTITY

Beverage Coolers and Beverage Cooler-Dispensers (SFWY)—Continued

One of the following product identities appears on the product:

- Beverage Cooler
- Beverage Cooler Less Condenser
- Beverage Cooler Less Condensing Unit
- Beverage Cooler-Dispenser (for a self-contained unit)
- Beverage Cooler-Dispenser Less Condenser
- Beverage Cooler-Dispenser Less Condensing Unit (for a remote beverage cooler or beverage cooler-dispenser)
- Section of Beverage Cooler
- Section of Beverage Cooler-Dispenser (for each section of a beverage cooler or beverage cooler-dispenser shipped separately from the factory, the function of which is essential to the basic operation of the beverage cooler or beverage cooler-dispenser)

Accessory for Beverage Cooler or Beverage Cooler-Dispenser (for a part or device, the function of which supplements or modifies the basic operation of the beverage cooler or beverage cooler-dispenser)

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Coin-operated equipment is covered under Vending Machines, Refrigerated (SQMX).

Nonrefrigerated dispensing equipment is covered under Food-preparing Machines, Commercial (IPST).

Beverage coolers and dispensers for marine use are covered under Beverage Coolers and Beverage Cooler-Dispensers, Marine (SCEV).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 471, "Commercial Refrigerators and Freezers".

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Beverage Cooler," "Beverage Cooler-Dispenser" (for a self-contained unit) "Beverage Cooler Less Condenser," "Beverage Cooler-Dispenser Less Condenser," "Beverage Cooler Less Condensing Unit," "Beverage Cooler-Dispenser Less Condensing Unit" (for a remote beverage cooler or beverage cooler-dispenser), "Section of Beverage Cooler," "Section of Beverage Cooler-Dispenser" (for each section of a beverage cooler or beverage cooler-dispenser shipped separately from the factory, the function of which is essential to the basic operation of the beverage cooler or beverage cooler-dispenser), or "Accessory for Beverage Cooler or Beverage Cooler-Dispenser" (for a part or device, the function of which supplements or modifies the basic operation of the beverage cooler or beverage cooler-dispenser).

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL REFRIGERATORS AND FREEZERS (SGKW)**GENERAL**

This category covers commercial refrigerators and freezers such as display cases, reach-in cabinets, meat cases, frozen food and merchandising cabinets, food service carts and soda fountain units. These products may be self-contained, sectional or remote. Accessories intended for use with commercial refrigerators and freezers are also covered under this category.

INSTALLATION

This equipment is rated 600 V ac or less and is intended to be installed in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

Commercial Refrigerators and Freezers (SGKW)—Continued

All units are marked with the refrigerant type; some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Certification Report available from the manufacturer identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants used have been determined to comply with ANSI/UL 2182, "Refrigerants."

Unitary refrigerators consist of a complete factory assembled and factory tested refrigeration system comprising one or more assemblies which may be shipped separately but which are intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained refrigerator is a unitary refrigerator consisting of a completely factory assembled and factory tested refrigerating system in which all the refrigerant containing parts are permanently connected at the factory.

A remote refrigerator is a refrigerator intended to be connected to a field-installed condensing unit located remote from the refrigerator.

Remote refrigerators employing carbon dioxide as a refrigerant in a cascade refrigerating system or as a heat-transfer fluid are intended to be connected to a system utilizing pressure-relief valves to reduce the risk of overpressure. The pressure-relief valves are typically supplied with or connected to the certified compressor rack (see LZFE) or receiver/heat exchanger used in the refrigeration system. The design pressure of the remote refrigerator should be not less than the design pressure of the associated CO₂ system components. The system design pressure is based on the operating pressure as referenced in clause 9.2.6 of ANSI/ASHRAE 15.

Accessories for commercial refrigerators and freezers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted for requirements relating to sanitation and connection to water supply and waste disposal lines.

The U.S. Environmental Protection Agency's Significant New Alternatives Policy (SNAP) Program requirements should be consulted for refrigerators, freezers, and combination refrigerator-freezers in this category that employ a flammable refrigerant (ASHRAE 34 Class A2, A2L or A3). Authorities Having Jurisdiction should also be consulted for any additional requirements.

PRODUCT MARKINGS

Some equipment may be designed to accept accessories installed in the field. In such cases, both the commercial refrigerator or freezer and the accessory are marked to relate the two for proper installation.

Equipment or section(s) of the equipment suitable for outdoor installation are so marked. Units not so marked are for indoor use only.

Commercial refrigerators and freezers may employ a wireway to permit end-to-end installation. The wireway of such units is marked accordingly.

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

Remote refrigerators employing carbon dioxide as a refrigerant in a cascade refrigerating system or as a heat-transfer fluid are marked to indicate their design pressure.

REBUILT PRODUCTS

This category also covers commercial refrigerators and freezers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial refrigerators and freezers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial refrigerators and freezers are subject to the same requirements as new commercial refrigerators and freezers.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Accessory for Commercial Freezer (for each part of a commercial freezer shipped separately from the factory, the function of which supplements or modifies the basic operation of the commercial freezer)

Accessory for Commercial Refrigerator (for each part of a commercial refrigerator shipped separately from the factory, the function of which supplements or modifies the basic operation of the commercial refrigerator)

Accessory for Commercial Refrigerator/Freezer (for each part of a commercial refrigerator/freezer shipped separately from the factory, the function of which supplements or modifies the basic operation of the commercial refrigerator/freezer)

Commercial Freezer (for a self-contained unit)

Commercial Freezer Less Condensing Unit (for a remote unit)

Commercial Refrigerators and Freezers (SGKW)—Continued

- Commercial Refrigerator (for a self-contained unit)
 - Commercial Refrigerator Less Condensing Unit (for a remote unit)
 - Commercial Refrigerator/Freezer (for a self-contained unit)
 - Commercial Refrigerator/Freezer Less Condensing Unit (for a remote unit)
 - Section of Commercial Freezer (for a section or device, the function of which is essential to the basic operation of the commercial freezer)
 - Section of Commercial Refrigerator (for a section or device, the function of which is essential to the basic operation of the commercial refrigerator)
 - Section of Commercial Refrigerator/Freezer (for a section or device, the function of which is essential to the basic operation of the commercial refrigerator/freezer)
- For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

- Refrigerators and freezers for household use are covered under Household Refrigerators and Freezers (SHZZ) and Household Freezers (SHMR).
- Specialized refrigerators or freezers are covered under Refrigerators and Freezers, Special Purpose (SOVQ).
- Factory-assembled walk-in refrigerators and freezers are covered under Walk-in Units, Commercial (SQTW).
- Door panel assemblies are covered under Door Panel Assemblies (FDIT).
- Beverage coolers and beverage cooler-dispensers are covered under Beverage Coolers and Beverage Cooler-Dispensers (SFWY).
- Nonrefrigerated cabinets are covered under Wired Cabinets (ZNXR).
- See Lead Content Verification of Products in Contact with Potable Water (QNVB).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 471, "Commercial Refrigerators and Freezers."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Commercial Refrigerator and/or Freezer" (for a self-contained unit), "Commercial Refrigerator and/or Freezer Less Condensing Unit" (for a remote unit), "Section of Commercial Refrigerator and/or Freezer" (for a section or device, the function of which is essential to the basic operation of the commercial refrigerator or freezer), or "Accessory for Commercial Refrigerator and/or Freezer" (for each part of a commercial refrigerator shipped separately from the factory, the function of which supplements or modifies the basic operation of the commercial refrigerator or freezer).

The Listing Mark for rebuilt commercial refrigerators and freezers also includes the word "Rebuilt," "Remanufactured" or "Reconditioned" preceding the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD FREEZERS (SHMR)

GENERAL

This category covers self-contained freezers consisting of a complete refrigeration system. The refrigeration systems are of the mechanical compression type, absorption type or thermoelectric type. Accessories intended for use with household freezers are also covered under this category.

This category will be obsolete August 21, 2016. On or before this date, all household freezer certifications will be transferred to Household Refrigerators and Freezers (SHZZ).

INSTALLATION

This equipment is intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code." The equipment is intended for connection to 15 or 20 A, 100 to 140 V or 15 A, 200 to 250 V, single-phase,

Household Freezers (SHMR)—Continued

alternating-current (ac) circuits; or combination ac/dc circuits or direct-current (dc) circuits where the dc voltage does not exceed 30 V.

Household freezers are certified in three classes as follows:

Freestanding — A freezer intended for open type installation only, not including stacking, locating in closets, alcoves, or other confined spaces.

Recessed Installation — A freezer intended to be supported by the floor or base cabinet, located in an enclosed area but not intended to be permanently attached to the building structure, adjacent cabinets or other appliances. These units are also suitable for freestanding installation.

Built-in Installation — A freezer intended to be permanently attached to or mounted in a wall, a cabinet or other surface of a building.

Accessories for household freezers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply lines.

The U.S. Environmental Protection Agency's Significant New Alternatives Policy (SNAP) Program requirements should be consulted for freezers in this category that employ a flammable refrigerant (ASHRAE 34 Class A2, A2L or A3). Authorities Having Jurisdiction should also be consulted for any additional requirements.

REBUILT PRODUCTS

This category also covers household freezers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt household freezers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household freezers are subject to the same requirements as new household freezers.

PRODUCT MARKINGS

Household freezers may be designed to accept accessories in the field. In such cases both the freezer and the accessory are marked to relate the two for proper installation.

A freezer intended for freestanding use is so marked on the unit. Each freezer intended for recessed installation has specified installation clearances marked on the unit, if clearances are required.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Accessory for Household Freezer

Household Freezer

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ICE CREAM MAKERS (SINX)

GENERAL

This category covers equipment intended for preparing products such as hard ice cream, soft-serve ice cream, milk shakes and sherbets, and may include means for dispensing the product directly into containers. These products may be self-contained or sectional. Accessories intended for use with ice cream makers are also covered under this category.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

All units are marked with the refrigerant type and some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34-1992 (amendment), "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Certification Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 15 and have been determined to be nonflammable or practically nonflammable in accordance with the requirements in ANSI/UL 2182, "Refrigerants."

Unitary ice cream makers consist of a complete factory-assembled and factory-tested refrigeration system comprising one or more assemblies that may be shipped separately but intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained ice cream maker is a unitary ice cream maker consisting of a completely factory-assembled and factory-tested refrigerating system in which all the refrigerant-containing parts are permanently connected at the factory.

Accessories for ice cream makers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water-supply and waste-disposal lines.

PRODUCT MARKINGS

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

Equipment or sections of the equipment suitable for outdoor use are so marked. Units not so marked are for indoor use only.

Ice Cream Makers (SINX)—Continued

Some equipment may be designed to accept accessories installed in the field. In such cases, both the ice cream maker and the accessory are marked to relate the two for proper installation.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Accessory for Ice Cream Maker
- Ice Cream Maker
- Section of Ice Cream Maker

RELATED PRODUCTS

Ice cream makers (without a compressor) for household use are covered under Food Preparing Machines, Household (IPWZ).

Coin-operated equipment is covered under Vending Machines, Refrigerated (SQMX).

Nonrefrigerated dispensing equipment is covered under Food Preparing Machines, Commercial (IPST).

Beverage coolers and beverage cooler-dispensers are covered under Beverage Coolers and Beverage Cooler-Dispensers (SFWY).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 621, "Ice Cream Makers."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ice Cream Maker," "Section of Ice Cream Maker" or "Accessory for Ice Cream Maker."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ICE MAKERS (SJBV)

GENERAL

This category covers devices that automatically manufacture and harvest ice in cube, flake, or other readily usable form, with or without provision for storage or means of dispensing ice. These products may be self-contained or sectional. Accessories intended for use with ice makers are also covered under this category.

This category does not cover tray type ice makers, ice vending machines, or ice maker and ice maker kits used in household refrigerators and freezers. See **RELATED PRODUCTS** below.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

All units are marked with the refrigerant type and some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Certification Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 34 and have been determined to comply with the requirements of ANSI/UL 2182, "Refrigerants."

An ice maker of other than the remote type consists of a completely factory assembled and factory tested refrigeration system comprising one or more assemblies that may be shipped separately but intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained ice maker consists of a completely factory assembled and factory tested refrigerating system in which all the refrigerant-containing parts are permanently connected at the factory.

Ice Makers (SJBV)—Continued

A remote ice maker is an ice maker intended to be connected to a field-installed condenser or condensing unit located remote from the ice maker.

Accessories for ice cream makers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Ice makers may be designed to accept accessories installed in the field. In such cases both the ice maker and the accessory are marked to relate the two for proper installation.

Ice makers or sections of ice makers suitable for outdoor installation are so marked. Ice makers or sections not so marked are for indoor use only.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Accessory for Ice Maker (for a part or device, the function of which supplements or modifies the basic operation of the ice maker)

- Ice Maker
- Ice Maker Less Condenser
- Ice Maker Less Condensing Unit
- Ice Maker Without Ice Storage Means (for a self-contained unit)
- Ice Maker Without Ice Storage Means Less Condenser
- Ice Maker Without Ice Storage Means Less Condensing Unit (for a remote ice maker)

Section of Ice Maker (for each section of an ice maker shipped separately from the factory, the function of which is essential to the basic operation of the ice maker)

RELATED PRODUCTS

Coin-operated equipment is covered under Vending Machines, Refrigerated (SQMX).

Ice makers for marine use are covered under Ice Makers, Marine (SAAH). Ice makers for installation into household refrigerators and freezers are Recognized under Specialty Refrigeration Equipment (SROT2).

Accessory ice-maker kits for installation into household refrigerators or freezers are covered under Household Refrigerators and Freezers (SHZZ) or Household Freezers (SHMR).

Products Verified for energy efficiency are covered under Ice Makers Verified for Energy Efficiency (ZWRP).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 563, "Ice Makers."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Ice Maker," "Ice Maker Without Ice Storage Means" (for a self-contained unit), "Ice Maker Less Condenser," "Ice Maker Without Ice Storage Means Less Condenser," "Ice Maker Less Condensing Unit," "Ice Maker Without Ice Storage Means Less Condensing Unit" (for a remote ice maker), "Section of Ice Maker" (for each section of an ice maker shipped separately from the factory, the function of which is essential to the basic operation of the ice maker), or "Accessory for Ice Maker" (for a part or device, the function of which supplements or modifies the basic operation of the ice maker).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

KITCHEN UNITS, REFRIGERATED (SJPT)

GENERAL

This category covers refrigerators rated 250 V or less in combination with ranges, microwave ovens and/or sink units. Accessories intended for use with refrigerated kitchen units are also covered under this category.

Kitchen Units, Refrigerated (SJPT)—Continued

INSTALLATION

This equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code." The equipment is investigated and tested to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer. Equipment provided with a gas range is also intended for installation under the requirements of ANSI Z223.1/NFPA 54, "National Fuel Gas Code."

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply and waste disposal lines, if applicable. Equipment connected to plumbing is intended for permanent connection to the source of supply.

PRODUCT MARKINGS

Kitchen units intended for recessed installation are marked to indicate the installation clearances.

Some equipment may be designed to accept accessories installed in the field. In such cases, both the refrigerated kitchen unit and the accessory are marked to relate the two for proper installation.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Accessory for Refrigerated Kitchen Unit
Refrigerated Kitchen Unit

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 250, "Household Refrigerators and Freezers."

The basic standard used to investigate the electric range portion of products in this category is ANSI/UL 858, "Household Electric Ranges."

The basic standard used to investigate the microwave oven portion of products in this category is ANSI/UL 923, "Microwave Cooking Appliances."

The basic standards used to investigate the gas range portion of products in this category are ANSI Z21.1, "Household Cooking Gas Appliances," and ANSI Z21.57, "Recreational Vehicle Cooking Gas Appliances."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerated Kitchen Unit" or "Accessory for Refrigerated Kitchen Unit."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECREATIONAL VEHICLE REFRIGERATORS AND FREEZERS (SKKQ)

GENERAL

This category covers refrigerators, freezers, and combination refrigerator-freezers, rated 250 V or less ac and/or 30 V or less dc, intended for use in recreational vehicles. These products are electrically operated, self-contained devices consisting of a complete refrigeration system that may be of the mechanical compression type, absorption type or thermoelectric type. These products are not gas-fired.

INSTALLATION

Recreational Vehicle Refrigerators and Freezers (SKKQ)—Continued

These products are certified in two classes as follows:

Freestanding — A unit designed for installation in other than a confined space. Each unit intended for freestanding installation is so marked.

Recessed — A unit designed for installation in a confined space. Each unit intended for recessed installation has specified installation clearances, if clearances are required, marked on the unit. These units are also suitable for freestanding installation.

These products are intended for installation in accordance with the manufacturer's instructions and as marked on the product. They are intended to be secured to the recreational vehicle structure. Reference should also be made to ANSI/NFPA 1192, "Recreational Vehicles."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Recreational Vehicle Freezer
- Recreational Vehicle Refrigerator

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Electric household refrigerators and freezers are covered under Household Refrigerators and Freezers (SHZZ) and Household Freezers (SHMR), respectively.

Gas-fired or combination gas/electric recreational vehicle refrigerators are covered under Refrigerators Using Gas Fuel (LPHR).

See Lead Content Verification of Products in Contact with Potable Water (QNVB).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 250, "Household Refrigerators and Freezers."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Recreational Vehicle Refrigerator" or "Recreational Vehicle Freezer," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERANT-CONTAINING COMPONENTS (SKQZ)

Condensers, Refrigerant (SLSV)

GENERAL

This category covers refrigerant condensers intended to liquefy refrigerant vapor by removal of heat. They are air-cooled, evaporative or water-cooled types. Water-cooled types have not been investigated for use as water heaters. Water-cooled assemblies are shell-and-tube or tube-in-tube type.

PRODUCT MARKINGS

All condensers are marked with the manufacturer's name, model number and the design pressure. Unless provided with a separate marking as indicated below, the products are also marked with the type(s) of refrigerant to be used.

Refrigerant condensers not marked to indicate the type of refrigerant used are provided with a marking that may be on a separate tag or label and attached to the unit cooler that reads "The design pressure marked on this component shall not be less than the installed system working pressure or less than the values outlined in ANSI/ASHRAE 15 for the charged refrigerant. After charging, mark the installed equipment with the refrigerant type and oil used," or equivalent.

Finned tube assemblies incorporating a motor-driven fan (forced-air-cooled units) are also marked with the electrical rating. Forced-air-cooled condensers suitable for outdoor installation are so marked.

PRODUCT CATEGORIES BY CATEGORY CODE

Condensers, Refrigerant (SLSV)—Continued

PRODUCT IDENTITY

The following product identity appears on the product:
Refrigerant Condenser

RELATED PRODUCTS

Water-cooled condensers intended for use as water heaters are covered under Refrigerant Heat Recovery Equipment (SOMU) or Heat Reclaimers, Refrigerant (SNLI).

Condenser receivers are covered under Receivers, Refrigerant (SOJV).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHQ).

REQUIREMENTS

The basic standard used to investigate forced-air-cooled condensers in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

The basic standard used to investigate all other condensers in this category is ANSI/UL 207, "Refrigerant-Containing Components and Accessories, Nonelectrical."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Condenser."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATED MEDICAL EQUIPMENT (SOPT)

GENERAL

This category covers self-contained refrigerated medical equipment, such as oxygen therapy and thermia devices designated for professional use by personnel in hospitals, nursing homes, medical care centers, medical offices and similar health care facilities.

This equipment has been investigated for electric shock, fire and mechanical hazards. Other risks, including those that may result from use of this equipment in the presence of flammable anesthetics, have not been investigated.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

This equipment has been investigated to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer.

Patient care equipment employs one of two attachment-plug caps. One is a locking-type cap identified by the marking "Hospital Only" and the other is a nonlocking-type ANSI Standard configuration grounding type cap identified by the marking "Hospital Grade" and a green dot on the body of the cap. The identification is visible after installation on the flexible cord. Such products are marked to indicate they are to be connected to a receptacle marked "Hospital Only" or "Hospital Grade."

Oxygen therapy equipment has been investigated with respect to the increased risks resulting from the presence of oxygen and electrical parts within the equipment. In view of the practical design features, it is essential for safety that all possible sources of ignition be kept away from these devices. Possible sources of ignition, against which precautions should be taken, include open flames, matches, cigarettes, accumulations of static electricity and reducing valves on oxygen tanks, which occasionally project flame or sparks due to ignition or explosion of rubber valve seats. The canopy (tent), reducing valve, oxygen cylinders, etc., used with oxygen therapy equipment have not been investigated nor covered as part of the certified equipment.

FACTORS NOT INVESTIGATED

The effect on a patient of simultaneous use of this equipment with other electrical apparatus and the physiological effects, beneficial or otherwise, which may be produced by this equipment, have not been investigated.

PRODUCT IDENTITY

Refrigerated Medical Equipment (SOPT)—Continued

One of the following product identities appears on the product:
Refrigerated Medical Equipment
Refrigerated Oxygen Therapy Equipment

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Equipment investigated to determine its suitability or safety for use where a flammable anesthetic is likely to be present is covered under Medical Equipment for Use in Hazardous Locations (PINR).

Nonrefrigerated medical equipment is covered under Medical Equipment (PIDF).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHQ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 416, "Refrigerated Medical Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY

Alternate UL Mark

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

REFRIGERATED MEDICAL EQUIPMENT or REFRIGERATED OXYGEN THERAPY EQUIPMENT*

AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY

Control No.

* or other appropriate product name as shown in the individual Classifications

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNIT COOLERS (SPLR)

GENERAL

This category covers unit coolers, which are direct cooling, factory made, encased assemblies consisting of a cooling element, fan(s) and motor(s), intended for the free circulation of air for refrigeration purposes. They may also incorporate means for defrosting of the cooling element.

This equipment is rated 600 V or less and is intended for permanent connection to the source of supply in accordance with ANSI/NFPA 70, "National Electrical Code."

This equipment is intended for use in refrigeration systems charged with the refrigerant indicated on the device, but has not been investigated from the standpoint of operation when associated with other equipment used to form the complete refrigeration system.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating and the design pressure. Unless provided with a separate marking as indicated below, the products are also marked with the type(s) of refrigerant to be used.

Unit coolers not marked to indicate the type of refrigerant used are provided with a marking that may be on a separate tag or label and attached to the unit cooler that reads "The design pressure marked on this component shall not be less than the installed system working pressure or less than the values outlined in ANSI/ASHRAE 15 for the charged refrigerant. After charging, mark the installed equipment with the refrigerant type and oil used," or equivalent.

A unit cooler with field wiring terminals is marked to indicate the type of connectors required for the field wiring.

PRODUCT IDENTITY

The following product identity appears on the product:
Unit Cooler

Unit Coolers (SPLR)—Continued

RELATED PRODUCTS

Equipment intended for air-conditioning purposes is referenced as fan-coil units and covered under Heating and Cooling Equipment (LZFE).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 412, "Refrigeration Unit Coolers."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unit Cooler."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNITS, REFRIGERATING (SPYZ)

GENERAL

This category covers complete refrigeration systems consisting of a hermetic motor-compressor, condenser, evaporator, refrigerant control, electrical controls, wiring and associated refrigerant-containing components including tubing, and may include a defrost system. These systems are primarily used to refrigerate cooling rooms and warehouses intended for the storage of food and other perishable products. These products may be self-contained or sectional. Accessories intended for use with refrigerating units are also covered under this category.

INSTALLATION

This equipment is rated 600 V or less and is intended for permanent connection to the source of supply in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code."

Refrigerating units consist of one or more factory-made sections. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

Accessories for refrigerating units are provided with instructions for installation into the product.

PRODUCT MARKINGS

The condensing sections of refrigerating units suitable for outdoor installation are so marked. Sections not marked as suitable for outdoor installation are for indoor use only.

Refrigerating units may be designed to accept accessories in the field. In such cases both the refrigerating unit and the accessory are marked to relate the two for proper installation.

REBUILT PRODUCTS

This category also covers refrigerating units that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt refrigerating units are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt refrigerating units are subject to the same requirements as new refrigerating units.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Accessory for Refrigerating Unit (for each part of a refrigerating unit shipped separately from the factory, the function of which supplements or modifies the basic operation of the refrigerating unit)

Refrigerating Unit (for a self contained unit)

Section of Refrigerating Unit (for a part or device, the function of which is essential to the basic operation of the refrigerating unit)

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

RELATED PRODUCTS

Refrigerated cabinets and cases are covered under Commercial Refrigerators and Freezers (SGKW).

Nonelectrical insulated wall panels are covered under Building Units (BLBT).

Door and frame assemblies for walk-in coolers are covered under Door Panel Assemblies (FDIT).

Units, Refrigerating (SPYZ)—Continued

Factory assembled walk-in refrigerators and freezers are covered under Walk-in Units, Commercial (SQTV).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 427, "Refrigerating Units."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerating Unit" (for a self contained unit), "Section of Refrigerating Unit" (for a part or device, the function of which is essential to the basic operation of the refrigerating unit), or "Accessory for Refrigerating Unit" (for each part of a refrigerating unit shipped separately from the factory, the function of which supplements or modifies the basic operation of the refrigerating unit).

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENDING MACHINES, REFRIGERATED (SQMX)

GENERAL

This category covers refrigerated vending machines designed for connection to alternating-current circuits rated not more than 600 V, and which incorporate refrigeration systems of the air cooled or water-cooled type employing hermetic refrigerant motor-compressors.

This equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

Some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Certification Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants comply with ANSI/UL 2182, "Refrigerants."

This equipment consists of a complete refrigeration system and associated electrical controls for the system and for delivery of the product.

Accessories, such as a coin/currency mechanism and debit/credit card readers, may be field installed. Unless proper and obvious installation of the accessory is evident, instructions for installing the accessory are provided as part of the vending machine.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

Where the equipment employs connection to a compressed carbon dioxide source, this category does not cover compressed carbon dioxide cylinders.

Some of this equipment employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

The burglary and theft features of these machines have not been investigated unless specifically indicated in the individual certification.

REBUILT PRODUCTS

This category also covers refrigerated vending machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt refrigerated vending machines are rebuilt to the extent necessary by disassembly and

Vending Machines, Refrigerated (SQMX)—Continued

reassembly using new or reconditioned parts. Rebuilt refrigerated vending machines are subject to the same requirements as new refrigerated vending machines.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating, design pressure and refrigerant type.

The venders are marked on or adjacent to the electrical rating plate with one of the following: "For Indoor Use Only," "Suitable for Protected Locations – See Installation Instructions" or "Suitable for Outdoor Use." Complete instructions appear on a vender intended for use in a protected location, indicating the manufacturer's recommendations concerning the use and/or installation of any canopies, marquees, shelters, etc. which may be necessary for the protection of the vender. The instructions may be located inside the vender if they are accessible through the front door.

PRODUCT IDENTITY

The following product identity appears on the product:
Refrigerated Vending Machine

For rebuilt products, the word "Rebuilt" or "Remanufactured" precedes the product identity.

RELATED PRODUCTS

For certifications of machines that vend nonrefrigerated products, see Vending Machines (YWV), or the specific category covering the equipment involved.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 541, "Refrigerated Vending Machines."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerated Vending Machine."

For rebuilt products, the word "Rebuilt" or "Remanufactured" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WALK-IN UNITS, COMMERCIAL (SQTV)

GENERAL

This category covers commercial walk-in refrigerators and freezers that are completely factory assembled. Accessories intended for use with walk-in units are also covered under this category.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

These units may contain refrigerant-containing components. If refrigerant-containing components are employed, all of the refrigerant-containing parts are permanently connected at the factory and tested for leakage prior to leaving the factory.

All refrigerants that may be employed in this equipment have been investigated to ANSI/ASHRAE 15 and have been determined to be nonflammable or practically nonflammable in accordance with ANSI/UL 2182, "Refrigerants."

Accessories for walk-in units are provided with instructions for installation into the product.

Authorities Having Jurisdiction (AHJ) should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines. AHJs should also be consulted if local installations require structural loading considerations.

PRODUCT MARKINGS

Some equipment may be designed to accept accessories installed in the field. In such cases, both the commercial walk-in unit and the accessory are marked to relate the two for proper installation.

Walk-in Units, Commercial (SQTV)—Continued

Equipment or sections of the equipment suitable for outdoor installation are so marked. Units not so marked are for indoor use only. Units marked suitable for outdoor installation have not been investigated with respect to wind, snow or other structural loading.

PRODUCT IDENTITY

One of the following product identities appears on the product:
Accessory for Commercial Walk-in Unit
Commercial Walk-in Unit

RELATED PRODUCTS

Refrigerated cabinets and cases are covered under Commercial Refrigerators and Freezers (SGKW). Nonelectrical insulated wall panels are covered under Building Units (BLBT). Door and frame assemblies for walk-in coolers are covered under Door Panel Assemblies (FDIT). Refrigeration units are covered under Units, Refrigerating (SPYZ).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 471, "Commercial Refrigerators and Freezers," and UL 427, "Refrigerating Units."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Walk-in Unit" or "Accessory for Commercial Walk-in Unit."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER COOLERS (SRAV)

Drinking-water Coolers (SRJX)

GENERAL

This category covers bottle- and pressure-type drinking-water coolers rated up to 250 V. The coolers are provided with a complete refrigeration system and associated electrical controls, and may also include means for heating water.

This equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

Some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Certification Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants comply with ANSI/UL 2182, "Refrigerants."

These products may contain water purification parts or system(s). However, the parts or system(s) used to purify the water have not been investigated to determine their effectiveness in purifying water unless specifically stated in the individual certifications.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating, design pressure and refrigerant type.

PRODUCT IDENTITY

The following product identity appears on the product:
Drinking-water Cooler

RELATED PRODUCTS

See Drinking Water System Components (FDNP).

Drinking-water Coolers (SRJX)—Continued

See Lead Content Verification of Products in Contact with Potable Water (QNVB).

Water coolers intended for use in hazardous (classified) locations are covered under Water Coolers for Use in Hazardous Locations (SUFI).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 399, "Drinking-Water Coolers."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Drinking Water Cooler."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL PROCESSING LIQUID COOLERS (SRFR)

GENERAL

This category covers coolers intended to condition water or other fluids used for developing photographic film, cooling or thawing bulk product, cooling medical equipment, such as magnetic resonance imagers (MRI) or computer axial topography (CAT) scanners, and similar processes. The fluids intended for use in these coolers are limited to glycol, water, and water with additives. These coolers are not intended for the cooling of potable water. These coolers are provided with a complete refrigeration system and associated electrical controls and may also incorporate means for heating and circulating the water or other fluid.

If intended to be connected to the water supply, Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection.

PRODUCT MARKINGS

These coolers are marked with the manufacturer's name, model number, electrical rating, the refrigerant type, and the high- and low-side design pressures.

A cooler with field wiring terminals is marked to indicate the type of conductors required for the field wiring.

PRODUCT IDENTITY

The following product identity appears on the product:

Commercial Processing Liquid Cooler

RELATED PRODUCTS

Bottle- and pressure-type potable water coolers are covered under Drinking Water Coolers (SRJX).

Nonrefrigerated fluid-handling systems are covered under Packaged Pumping Systems (QCZJ).

Other types of specialized refrigerators are covered under Specialty Refrigeration Equipment (SROT).

Water or liquid chillers specifically for use in semiconductor processing systems are covered under Semiconductor Manufacturing Equipment, Miscellaneous (TWTZ).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 471, "Commercial Refrigerators and Freezers."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Commercial Processing Liquid Coolers (SRFR)—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. REFRIGERATION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (SSCR)

ACCESSORIES, REFRIGERATION FOR USE IN HAZARDOUS LOCATIONS (SSPZ)

Controllers, Refrigeration for Use in Hazardous Locations (STDX)

GENERAL

This category covers temperature- and pressure-operated controllers.

PRODUCT IDENTITY

The following product identity appears on the product:

Refrigeration Controller for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 873, "Temperature-Indicating and -Regulating Equipment," or ANSI/UL 60730-1, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," in addition to one or more of the following as applicable:

ANSI/UL 60730-2-2, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Motor Protectors"

ANSI/UL 60730-2-3, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Protectors for Ballasts for Tubular Fluorescent Lamps"

UL 60730-2-4, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Motor Protectors for Hermetic and Semi-Hermetic Motor-Compressors"

ANSI/UL 60730-2-6, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls, Including Mechanical Requirements"

ANSI/UL 60730-2-9, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Temperature Sensing Controls"

UL 60730-2-10A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Motor Starting Relays"

UL 60730-2-13A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Humidity Sensing Controls"

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

482 REFRIGERATION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (SSCR)

Controllers, Refrigeration for Use in Hazardous Locations (STDX)—Continued

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigeration Controller for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL REFRIGERATORS AND FREEZERS FOR USE IN HAZARDOUS LOCATIONS (STRV)

GENERAL

This category covers commercial refrigerators and freezers of the self-contained reach-in type, having provision for connection to threaded rigid conduit.

In the storage of any chemicals in the refrigerators and freezers, consideration should be given to the inherent decomposition and reaction hazards of the chemicals.

PRODUCT IDENTITY

The following product identity appears on the product:
Commercial Refrigerator and/or Freezer for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Refrigerator and/or Freezer for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER COOLERS FOR USE IN HAZARDOUS LOCATIONS (SUFT)

GENERAL

This category covers bottled water and line-supplied types of water coolers.

These appliances are self-contained units with a complete refrigeration system and associated electrical controls. The refrigeration system has provision for connection to threaded rigid conduit.

Appliances intended to be connected to external water sources have not been investigated with respect to pollution of water supply through reverse action due to low water pressure or other reasons.

PRODUCT IDENTITY

The following product identity appears on the product:
Water Cooler for Use in Hazardous Locations

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REFRIGERATION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (SSCR)

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Water Cooler for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REMOTE RACKING DEVICES FOR SWITCHGEAR AND CONTROLGEAR (SWJE)

USE

This category covers equipment that provides a method to remotely operate (rack) withdrawable elements, such as circuit breakers or fused contactor assemblies, between the connected and disconnected position. These remote racking devices are intended for use in conjunction with switchgear or controlgear, but do not modify the function or construction of the gear itself.

Each remote racking device is provided with instructions that identify the withdrawable elements that are intended to be remotely operated by the racking device. Use of the remote racking device with other withdrawable elements has not been investigated.

PRODUCT IDENTITY

The following product identity appears on the product:
Remote Racking Device

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 2876, "Outline of Investigation for Remote Racking Devices for Switchgear and Controlgear."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES (SYKJ)

GENERAL

This category covers equipment designed for the detection, initiation, notification and control of signals indicative of fire, supervisory, watchman, releasing operation, and the control of the flow of smoke.

This category also covers service companies who are capable of certifying systems that comply with nationally recognized installation standards.

This equipment is intended to be installed, maintained, and operated as system arrangements in conformity with the following:

- ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems"
- ANSI/NFPA 12A, "Halon 1301 Fire Extinguishing Systems"
- ANSI/NFPA 13, "Installation of Sprinkler Systems"
- ANSI/NFPA 15, "Water Spray Fixed Systems for Fire Protection"
- ANSI/NFPA 16, "Installation of Foam-Water Sprinkler and Foam-Water Spray Systems"

- ANSI/NFPA 17, “Dry Chemical Extinguishing Systems”
- ANSI/NFPA 17A, “Wet Chemical Extinguishing Systems”
- ANSI/NFPA 72, “National Fire Alarm and Signaling Code”
- ANSI/NFPA 92A, “Recommended Practice for Smoke-Control Systems”
- ANSI/NFPA 92B, “Guide for Smoke Management Systems in Malls, Atria, and Large Areas”

Users of this equipment should consult Authorities Having Jurisdiction (AHJ) concerning the particular types to be used, number and location of appliances, character and installation of wiring, methods to be followed in the receipt and disposition of signals, keeping of records, rendering of reports, and all other details having a bearing on adequate installation, maintenance and use of the system to be employed.

Certified equipment is subjected to investigation to determine its suitability for its intended service and for installation, maintenance and use in conformity with the applicable NFPA standards, with particular regard to design and construction, practicability of application and reliability of performance in addition to the possible electrical hazards involved in its use.

A complete system is considered to be a combination of interrelated signal-initiating devices, signal-transmitting devices, signal-notification appliances and control unit installed in accordance with regulations enforced by the AHJ who determines the suitability of the installation for its particular application. The certification indicates that wiring diagrams have been submitted with the equipment, which provide details for interconnecting it to other interrelated devices for the intended application. The interconnection details are shown on the equipment or are in a separate installation document provided with the equipment and referenced in the marking on the equipment by drawing number and issue date and/or revision level.

Equipment may be used in different combinations to form a system. All certified equipment forming the system may be of one manufacture or of different manufactures. The installation wiring diagram provided as a part of the certified equipment should be consulted for specific details.

A system formed of separately certified parts to provide a central station fire alarm system may be certificated by a company certified under Central Station Protective Signaling Services (UUF_X).

A system formed of separately certified parts to provide a local, auxiliary, remote station, or proprietary fire alarm system may be certificated by a company certified under Local, Auxiliary, Remote Station, and Proprietary Protective Signaling Services (UUS_J).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUDIBLE-SIGNAL APPLIANCES (ULSZ)

GENERAL

This category covers electrically operated bells, buzzers, horns and similar signal-sounding appliances for fire-protective signaling service. These appliances are marked with an audibility rating.

Audible-signal appliances intended for fire alarm service, public mode, are rated a minimum 75 dB(A) at 10 ft. Audible-signal appliances intended for fire alarm service, private mode only, are rated a minimum 45 dB(A) at 10 ft.

These appliances are not to be confused with audible-signal appliances for general signaling (nonfire alarm) use, which are covered under Audible-signal Appliances, General Signal (UCST).

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term “Audible Signal Appliance,” “Audible Signaling Appliance – Private Mode Only,” “Audible Signal Appliance Accessory” or “Audible Signaling Appliance Subassembly.”

PRODUCT IDENTITY

One or more of the following product identities appears on the product:

- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling categories. When applicable, the product identity may include “and General Signaling” or “and Emergency Signaling,” as appropriate (e.g., “Fire Alarm and Emergency Signaling Equipment”).

The product identities may be abbreviated as follows:

- Type E (for Emergency Signaling Equipment)
- Type E Subassembly (for Emergency Signaling Equipment Subassembly)

- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)

ADDITIONAL INFORMATION

Audible-signal Appliances (ULSZ)—Continued

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 464, “Audible Signal Appliances.”

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALING,” the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Fire Alarm Equipment” or “Fire Alarm Subassembly.”

Some of these products are also Listed under other Signaling categories. When applicable, the product name may include “and General Signaling” or “and Emergency Signaling,” as appropriate (e.g., “Fire Alarm and Emergency Signaling Equipment”).

The product name may be abbreviated as follows: The word “Type:” followed by the appropriate Type Code (as shown below), additionally followed by “Subassembly,” as applicable.

Type Codes:

- F – Fire Alarm Equipment
- G – General Signaling Equipment
- E – Emergency Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL UNITS, SYSTEM (UOJZ)

GENERAL

This category covers electrical control units for fire-protective signaling systems to be employed in indoor locations in accordance with ANSI/NFPA 72, “National Fire Alarm Code.”

Products investigated for outdoor locations are identified in the individual certifications with respect to the installation environment (outdoor), location (dry, damp or wet) and maximum air ambient temperature.

A control unit consists of a unit assembly of electrical parts having provision for connection of power-supply circuits routed through the control unit equipment by a prescribed scheme of circuiting. The circuits are extended to separate devices by which the operating parts of the control units are actuated for signals and to separate or incorporated appliances by which the signals are indicated, so as to form a coordinated system combination for definite signaling services.

The Listee of a control unit furnishes the related actuating devices and signal-indicating appliances for use with the control unit or indicates the particular devices and appliances required and supplies any instructions necessary to complete their interconnection at the installation.

The individual certifications indicate that wiring diagrams have been submitted with the control unit, along with information regarding its intended application, and the unit has been tested with representative actuating devices and signal-indicating devices to be used with it as an interrelated assembly. Reference is made in the marking of the control unit to the wiring diagram showing complete information except when the installation wiring diagram is secured to the control unit.

Identification of the information in the individual certifications is as follows:

- Local System Type (L)
- Local System Type with Shunt-type Connection to Master Box (LS)
- Auxiliary System Type (A)
- Remote Station System Type (RS)
- Proprietary System Type (P)
- Central-station System Type (CS)
- Protected Premise Unit (Protected Premises Unit or PPU)
- Supervising Station Unit (Receiving Unit or RU)

System Control Unit with Emergency Voice Communication — A system control unit with emergency voice communication consists of a control unit that employs a speaker system in lieu of conventional general alarm-indicating circuits. The control unit may also have additional provision for telephone communication by use of hand sets. A tape deck with a prerecorded message may also be employed as a supplementary feature.

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES
 (SYKJ)

484

Control Units, System (UOJZ)—Continued

System Control Unit with Emergency Telephone Communication — A system control unit with emergency telephone communication consists of a control unit with conventional general alarm-indicating circuits and additionally employs telephone communication circuits to remote telephone hand sets for emergency communication during a fire condition, usually for use by fire department personnel.

The types of devices that can be connected for the service indicated in the individual certifications for each type control unit are as follows:

- A – Automatic fire alarm: Thermostats, smoke detectors, etc.
- M – Manual fire alarm: Manually-operated boxes
- WF – Waterflow alarm: Waterflow switches
- SS – Supervisory: Gate valves, water-level switches, temperature switches, carbon monoxide detectors, residential fire alarm control units, etc.
- WSS – Watchman's supervisory service

The type of signaling service applicable to each type of control unit is as follows:

- C – Coded
- NC – Noncoded
- M – March Time
- MX – Multiplex
- 1W-RF – Radio Frequency (one-way private radio)
- 2W-RF – Radio Frequency (two-way private radio)
- Rev Pol – Reverse Polarity
- DAC – Digital Alarm Communicator
- OT – Other Transmission Technologies

Where more than one type of control unit is indicated for a model number, such as Type Fire Alarm (L, LS, A, RS), that particular model is suitable for all the indicated applications. The change from one type to another may be made by deletion or addition of a panel or module inside the control unit cabinet or revisions to operating software to provide the additional function. In other cases a control unit may be suitable for a dual function without any panel changes, such as a Type Fire Alarm (P, RS).

Authorities Having Jurisdiction should be consulted before installation or revision.

PRODUCT MARKINGS

Each complete product is marked to indicate its intended use. This consists of the word "Commercial," followed by "Protected-Premises Control Unit" or "Supervising Station Control Unit," consistent with the description in the individual certifications.

PRODUCT IDENTITY

One or more of the following product identities appears on the product:

- Fire Alarm and Security Equipment (for products where the word "SECURITY" is included in the Certification Mark)
- Fire Alarm and Security Equipment Subassembly (for products where the word "SECURITY" is included in the Certification Mark)
- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product identity may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., Fire Alarm and Telephone Equipment).

The product identities may be abbreviated as follows:

- Type E (for Emergency Signaling Equipment)
- Type E Subassembly (for Emergency Signaling Equipment Subassembly)
- Type EM (for Enclosed Energy Management Equipment)
- Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)
- Type HN (for Hospital Signaling and Nurse Call Equipment)
- Type HN Subassembly (for Hospital Signaling and Nurse Call Equipment Subassembly)
- Type IT (for Information Technology Equipment)
- Type IT Subassembly (for Information Technology Equipment Subassembly)
- Type S (for Security Equipment)
- Type S Subassembly (for Security Equipment Subassembly)
- Type T (for Telephone Equipment)
- Type T Subassembly (for Telephone Equipment Subassembly)

Where model numbers are indicated in the individual certifications, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

RELATED PRODUCTS
SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES (SYKJ)

Control Units, System (UOJZ)—Continued

For additional information regarding central station systems, see Central-station Protective Signaling Services (UUFJ).

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 864, "Control Units and Accessories for Fire Alarm Systems."

Some products covered under this category have also been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010), "Control Panel Standard – Features for False Alarm Reduction." See Control Panels, SIA False Alarm Reduction (AMTB).

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

The Certification Mark for fire alarm equipment may include the designation "___ of ___." The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

For products additionally investigated with respect to security applications, the word "SECURITY" is included in the Certification Mark.

Additional Certification Markings

Products that have also been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010) are marked with one of the following statements:

- ALSO CERTIFIED TO ANSI/SIA CP-01 (2000)**
- ALSO CERTIFIED TO ANSI/SIA CP-01 (2007)**
- ALSO CERTIFIED TO ANSI/SIA CP-01 (2010)**

Alternate UL Mark**UL MARK**

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The Listing Mark for fire alarm equipment may include the designation "___ of ___." The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- S** – Security Equipment
- F** – Fire Alarm Equipment
- HN** – Hospital Signaling and Nurse Call Equipment
- G** – General Signaling Equipment
- E** – Emergency Signaling Equipment
- EM** – Enclosed Energy Management Equipment
- IT** – Information Technology Equipment
- T** – Telephone Equipment

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and one of the following statements as appropriate:

- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2000**
- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2007**
- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2010**

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES (SYKJ)

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EMERGENCY COMMUNICATION AND RELOCATION EQUIPMENT (UOQY)

GENERAL

This category covers units intended to be installed as a system for providing emergency voice communication on either a selective or general basis, within multiple-unit installations.

Specific appliances or appliance groups intended for use with this equipment are identified in the individual certifications. Instructions describing interconnection at the installation site are provided with the product, including wiring diagrams.

This equipment is intended to be installed in areas specified by ANSI/NFPA 72, "National Fire Alarm Code." Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual certifications.

PRODUCT IDENTITY

One or more of the following product identities appears on the product:

Fire Alarm and Security Equipment (for products where the word "SECURITY" is included in the Certification Mark)

Fire Alarm and Security Equipment Subassembly (for products where the word "SECURITY" is included in the Certification Mark)

Fire Alarm Equipment

Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product identity may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., Fire Alarm and Telephone Equipment).

The product identities may be abbreviated as follows:

Type E (for Emergency Signaling Equipment)

Type E Subassembly (for Emergency Signaling Equipment Subassembly)

Type EM (for Enclosed Energy Management Equipment)

Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)

Type F (for Fire Alarm Equipment)

Type F Subassembly (for Fire Alarm Equipment Subassembly)

Type G (for General Signaling Equipment)

Type G Subassembly (for General Signaling Equipment Subassembly)

Type HN (for Hospital Signaling and Nurse Call Equipment)

Type HN Subassembly (for Hospital Signaling and Nurse Call Equipment Subassembly)

Type IT (for Information Technology Equipment)

Type IT Subassembly (for Information Technology Equipment Subassembly)

Type S (for Security Equipment)

Type S Subassembly (for Security Equipment Subassembly)

Type T (for Telephone Equipment)

Type T Subassembly (for Telephone Equipment Subassembly)

RELATED PRODUCTS

This equipment differs from Control Unit Accessories, System Equipment (UOXX), providing similar service, in that operation of the equipment is not dependent upon connection to a fire-alarm control unit.

Amplifiers included within or connected to this equipment to form systems are covered under Speakers and Amplifiers for Fire Protective Signaling Systems (UEAY) or, as components for use in emergency communication system applications, under Emergency Communication and Relocation Equipment (UOQY2).

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 864, "Control Units and Accessories for Fire Alarm Systems."

CONTROL UNIT ACCESSORIES, SYSTEM (UOXX)

GENERAL

This category covers electrical units intended for use with fire-protective signaling systems employed in indoor locations in accordance with ANSI/NFPA 70, "National Electrical Code."

Products investigated for outdoor locations are identified in the individual certifications with respect to the installation environment (outdoor), location (dry, damp or wet) and maximum air ambient temperature.

Only amplifiers covered under this category have been investigated for use in fire alarm communication system applications. Speakers for use with amplifiers that have been investigated for fire alarm service applications are covered under Speakers and Amplifiers for Fire Protective Signaling Systems (UUMW).

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT IDENTITY

One or more of the following product identities appears on the product:

The Certification Mark for fire alarm equipment may include the designation "___ of ___." The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

For products additionally investigated with respect to security applications, the word "SECURITY" is included in the Certification Mark.

Products that have also been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010) are marked with one of the following statements:

- ALSO CERTIFIED TO ANSI/SIA CP-01 (2000)**
- ALSO CERTIFIED TO ANSI/SIA CP-01 (2007)**
- ALSO CERTIFIED TO ANSI/SIA CP-01 (2010)**

Alternate UL Mark

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The Listing Mark for fire alarm equipment may include the designation "___ of ___." The first space is stamped with the number indicating the

Control Unit Accessories, System (UOXX)—Continued

position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- S** - Security Equipment
- F** - Fire Alarm Equipment
- HN** - Hospital Signaling and Nurse Call Equipment
- G** - General Signaling Equipment
- E** - Emergency Signaling Equipment
- EM** - Enclosed Energy Management Equipment
- IT** - Information Technology Equipment
- T** - Telephone Equipment

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and one of the following statements as appropriate:

- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2000**
- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2007**
- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2010**

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DETECTORS, AUTOMATIC FIRE (UPLV)

GENERAL

This category covers individual devices or prescribed combinations of devices designed to detect flame, heat, smoke, or combustion gases resulting from a fire and to automatically operate electrical signaling contacts. The signaling contacts may be integral parts of an individual device or parts of a separate device to which the detecting element is connected as an extended component.

The signaling contacts of the detector are intended to be connected to the circuit conductors of fire protective signaling systems recognized by the National Fire Protection Association Standards so that the fire alarm signal initiated by the detector will be indicated by the system.

The type of system (central station, proprietary, auxiliary, remote station or local) with which the detector can be used depends upon the design of the signaling circuit to which the detector contacts are intended to be connected. A detector may have noncoded signaling contacts connected directly to the actuating circuit of system control unit or to the actuating circuit of an electrically operated transmitter which will transmit coded signals over the signaling line circuit of a local, auxiliary, proprietary, remote station, or central station system.

The wiring diagram of the transmitter or system control unit with which the detector is used will indicate the circuit application of the detector.

A combination-type detector depends upon two or more related but separate pieces of equipment which are designed to be installed together so as to form a complete detector.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Smoke-automatic Fire Detectors (UROX)

GENERAL

Smoke-automatic Fire Detectors (UROX)—Continued

This category covers detecting combinations designed to detect smoke particles. Smoke detectors may or may not be designed to be connected to fire alarm system control units (see **APPLICATIONS** below).

A heat detector and/or an audible-signaling appliance may be provided integral with the detector.

The primary function of duct detectors is to shut down the blowers and/or dampers of air conditioning and ventilating systems in an attempt to prevent a possible panic and smoke damage from distribution of smoke. Duct detectors are not intended as a substitute for open-area protection.

The level of toxicity produced by the combustibles at which smoke detectors actuate has not been investigated.

This category also covers detectors and accessories that are capable of receiving in-service firmware revisions. The approved firmware release levels are identified in the individual certifications. The products provide a means for identifying the current firmware version of the unit.

DETECTOR TYPES

Photoelectric (P) — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

Ionization (I) — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

Combination Photoelectric/Ionization (P/I) — Employs both principles of detection in one unit.

Projected Beam (PB) — A light beam is projected across the space of area to be protected.

Air Sampling (AS) — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air is analyzed for fire products.

APPLICATIONS

Open-area Protection (OAP) — Requires detector connection to a compatible system control unit for operation.

Releasing Service (RS) — Intended for detector connection only to releasing devices, such as electromagnetic door holders, fire dampers, etc.

Open-area Protection with Releasing Service (OAP/RS) — Incorporates supplementary switching contacts for additional connection to releasing devices.

Duct Detector [D (ST)] — Intended for installation on the side of a duct. Employs sampling tubes that extend into the duct.

Duct Detector [D (I)] — For installation inside a duct.

COMPATIBILITY WITH CONTROL UNITS

Smoke detectors for open-area protection are intended to be connected to the initiating device circuit of a fire alarm system control unit.

Multiple-wire detectors, employing power-supply terminals or leads that do not obtain power from the initiating-device circuit of a system control unit, are compatible with the initiating device circuits of any certified system control unit if (1) failure of the power to the detector is supervised at the control unit, and (2) the smoke detector is powered from a "Regulated" power-supply output, or a "Special Application" power-supply output for which the voltage outputs have been investigated. Compatible models for "Special Application" outputs are indicated on the installation wiring diagram of the control unit and/or detectors.

Two-wire detectors, whose power-supply terminals or leads are the same as the signaling terminals, and obtain power from the initiating-device circuit of a system control unit, are investigated for compatibility either by test or a review of the circuit parameters of both the detector and control unit. Certification is restricted only to those control units with which such an investigation was made. Interconnection limitations and compatible models are indicated on the installation wiring diagram of control unit and/or detectors.

INSTALLATION

Refer to ANSI/NFPA 72, "National Fire Alarm Code," and ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," for installation, maintenance, and testing guidelines.

Spacings — Although there are no assigned spacings to these detectors, test fires, using the maximum amount of combustible for the risk involved, may be employed. See ANSI/NFPA 72 for additional guidelines.

Environmental Considerations — Open-area detectors are intended for indoor use only where normal ceiling temperatures (max 37.8°C (100°F)) prevail. Care should be used that detectors are not installed in areas where conditions may cause unwanted (false) alarms.

Duct detectors are intended to be installed in ducts of heating, ventilating, and air conditioning systems where temperatures at the detector do not exceed 37.8°C (100°F).

Smoke-automatic Fire Detectors (UROX)—Continued

Ionization detectors should not be used in an environment of high-level radiation unless tests in the actual environment have shown that the radiation will not interfere with operation of the detectors.

Effect of Velocity — The velocities indicated in the individual certifications are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. The performance of photoelectric-type detectors is not affected by velocity. Velocity limits for duct detectors are based on response to fire tests in ANSI/UL 268A, "Smoke Detectors for Duct Application."

Stability Test — In view of the innumerable environmental conditions that exist in the field, it is recommended that the stability of detectors be monitored prior to connection to a fire alarm system for at least three months or more to screen out locations of detectors where unwanted (false) alarms may occur. Relocation of the detectors, use of a detector with a different principle of operation, or a change in the sensitivity setting where permitted in the marking of the detector may be required.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of one of the following:

For nonseparable heads and bases:

1. Smoke Detector (+) for Open Area Protection
2. Smoke Detector (+) for Open Area Protection. Also Suitable for Releasing Device Service.
3. Smoke Detector (+) for Releasing Device Service
4. Smoke Detector (+) for Duct Application

For separable heads:

1. Smoke Detector Head (+) for Use with a (*) UL Listed Base
2. Smoke Detector Head (+) for Open Area Protection When Used with a (*) UL Listed Base
3. Smoke Detector Head (+) for Open Area Protection When Used with a (*) UL Listed Base. Also Suitable for Duct Application.
4. Smoke Detector Head (+) for Open Area Protection When Used with a (*) UL Listed Base. Also Suitable for Releasing Device Service.
5. Smoke Detector Head (+) for Releasing Device Service When Used with a (*) UL Listed Base
6. Smoke Detector Head (+) for Duct Application When Used with a (*) UL Listed Base
7. Smoke Detector Head When Used with a (*) UL Listed Smoke Duct Detector Housing

For separable bases and duct housing:

1. Detector Base (+) for Use with a (*) UL Listed Head
2. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head
3. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head. Also Suitable for Duct Application.
4. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head. Also Suitable for Releasing Device Service.
5. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head. Also Suitable for Releasing Device Service and Duct Application.
6. Detector Base (+) for Releasing Device Service When Used with a (*) UL Listed Head
7. Smoke-Duct Detector Housing for Use with (*) UL Listed Head

For separable system assemblies:

1. Smoke Detector Projected Beam System Unit
 2. Smoke Detector Air Sampling System Unit
 3. Smoke Detector for Duct Application Subassembly
- + To be inserted when applicable: "with Integral Audible Signal," "with Integral Heat Detector" or "with Integral Audible Signal and Heat Detector"

* Company name or File No. (Sxxxx)

Detectors marked with the designation "with Integral Audible Signal" include an audible-signaling appliance in the unit (head or base), which is energized under an alarm condition.

Detectors marked with the designation "with Integral Heat Detector" include a heat detector in the unit, which is connected internally to the smoke detector alarm circuit. Actuation of the head detector results in the same alarm signal as obtained from the smoke detector.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)

RELATED PRODUCTS

Combination door closers and holders incorporating automatic smoke detection components are covered under Combination Fire Door Closers and Holders (GTIS).

ADDITIONAL INFORMATION

Smoke-automatic Fire Detectors (UROX)—Continued

For additional information, see Detectors, Automatic Fire (UPLV), Signal and Fire Alarm Equipment and Services (SYK) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate open-area and releasing-service detectors in this category is ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems."

The basic standard used to investigate duct detectors in this category is ANSI/UL 268A, "Smoke Detectors for Duct Application."

UL MARK

A two-Certification-Mark system is employed for separable detector heads and bases. This permits the separate shipment of bases and heads to facilitate installation and maintenance. The Certification Marks on the separable units, coupled with a marking to cross-reference the head and the base, identify the parts to be used together to form a complete detector assembly.

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

Where model numbers are indicated in the individual certifications, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

Alternate UL Mark

A two-Listing-Mark system is employed for separable detector heads and bases. This permits the separate shipment of bases and heads to facilitate installation and maintenance. The Listing Marks on the separable units, coupled with a marking to cross-reference the head and the base, identify the parts to be used together to form a complete detector assembly.

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

F - Fire Alarm Equipment

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Smoke-automatic Fire Detector Accessories (URRQ)

GENERAL

This category covers smoke detector accessories, which are devices employed to supplement smoke detector operation when connected as part of a fire alarm system or used to validate smoke detector operation. The interconnection is indicated on the installation wiring diagram associated with the detector.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use as indicated in the individual certifications.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)

ADDITIONAL INFORMATION

For additional information, see Smoke-automatic Fire Detectors (UROX), Detectors, Automatic Fire (UPLV), Signal and Fire Alarm Equipment and Services (SYK) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Smoke Detectors for Special Applications (URXG)

USE AND INSTALLATION

This category covers smoke-automatic fire detectors employing a special construction different from conventional detectors and designed to detect products of combustion in a specific location. These detectors are not intended as a substitute for open-area protection.

These detectors are intended to be installed in accordance with the manufacturer's installation instructions, in a manner acceptable to the Authority Having Jurisdiction and in accordance with ANSI/NFPA 72, "National Fire Alarm and Signaling Code," or other NFPA Standards that may apply, such as for extinguishing system applications. The sensitivity rating of the detector should be taken into consideration with regard to installation in an area to be protected under operating conditions to guard against false alarms. The detectors may be connected to the initiating-device circuits of certified control units that provide audible-alarm signals, or employed as part of an extinguishing system.

This category also covers smoke-automatic fire detectors employing a special construction that are capable of receiving in-service firmware revisions. The approved firmware release levels are identified in the individual certifications. The products provide a means for identifying the current firmware version of the unit.

Authorities Having Jurisdiction should be consulted before installation.

Effect of Velocity — The velocities indicated in the individual certifications are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. Velocity limits for duct detectors are based on response to fire tests in ANSI/UL 268A, "Smoke Detectors for Duct Application."

Detector Types

Photoelectric (P) — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

Ionization (I) — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

Combination Photoelectric/Ionization (P/I) — Employs both principles of detection in one unit.

Air Sampling (AS) — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air is analyzed for fire products.

Video Image Smoke Detector (VI) — Intended to detect the image of smoke from a fire in the area of view covered by a video camera.

The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- F – Fire Alarm Equipment
- *****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE ALARM DEVICES, SINGLE AND MULTIPLE STATION, AND ACCESSORIES (UTER)

The following listings cover single- and multiple-station heat and smoke detectors and related accessories intended to be installed in ordinary indoor locations in accordance with Chapter 2 of the National Fire Protection Association Standard No. 72 titled the National Fire Alarm Code.

The levels of toxicity produced by the combustibles at which single- and multiple-station fire alarm devices are actuated have not been investigated by UL.

For a description of the applicable Listing Mark refer to the sub-categories Single- and Multiple-Station Heat Detectors (UTFS) and Single- and Multiple-Station Smoke Detectors (UTGT).

Single- and Multiple-station Heat Detectors (UTFS)

USE AND INSTALLATION

This category covers single- and multiple-station heat detectors intended to be employed in indoor locations.

Single-station Type — Single-station heat detectors are self-contained units incorporating a releasing mechanism, operating mechanism, and an alarm mechanism. In operation, heat actuates the releasing element, permitting stored energy (stored compressed gas or spring) embodied in the unit to sound an alarm. Temperature ratings and spacing limitations are given in the individual certifications.

Multiple-station Type — Multiple-station heat detectors are intended for use in fire alarm systems. They include thermally sensitive detector units that initiate a signal by releasing compressed gas from a storage cylinder through an alarm mechanism (or horn) to sound an audible signal. These devices are interconnected by tubing.

Single- and Multiple-station Heat Detectors (UTFS)—Continued

Both single- and multiple-station units employing compressed gas as the operating mechanism employ a sight glass or visual indicator to check for loss of contents by leakage, tampering or operation.

The individual certifications note the limitations on the maximum length of tubing between the gas storage cylinder, detector units, alarm mechanisms and other system components, and on operating-temperature ratings, spacing limitations (sensitivity), and other details pertinent to the use of these devices.

Ordinarily these devices are intended for locations where normal ceiling temperatures prevail (below 100°F). Locations where temperatures at ceiling are likely to be unduly high, from sources of heat other than fire conditions, such as boiler rooms, demand special consideration. Under these conditions, alarm devices operating normally at higher temperatures and capable of withstanding high temperatures for long periods of time may be required. Care should be exercised to select alarm devices having the proper temperature rating to guard against false alarms from premature operation:

For ceiling temperatures not exceeding 100°F, the 136 to 165°F (ordinary) rating devices are recommended.

For ceiling temperatures exceeding 100°F, but not 150°F, the 174 to 212°F (intermediate) rating devices are recommended.

The spacings specified in the individual certifications are for flat, smooth ceiling construction of ordinary height, generally regarded as the most favorable condition for distribution of heated air currents resulting from a fire. Under other forms of ceiling constructions, reduced spacing of alarm devices may be required.

The placement and spacing of alarm devices should be based on consideration of the ceiling construction, ceiling height, room or space areas, space subdivision, the normal ceiling temperature, possible exposure of the devices to abnormal heat conditions, and to draft conditions likely to be encountered at the time of a fire.

PRODUCT IDENTITY

- One of the following product identities appears on the product:
 - Multiple-station Heat Detector
 - Single- and/or Multiple-station Heat Detector
 - Single- and/or Multiple-station Heat Detector Accessory
 - Single-station Heat Detector

ADDITIONAL INFORMATION

For additional information, see Fire Alarm Devices, Single and Multiple Station, and Accessories (UTER), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 539, "Single and Multiple Station Heat Alarms."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

Alternate UL Mark

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names as appropriate: "Single Station Heat Detector," "Multiple-Station Heat Detector," "Single- and/or Multiple-Station Heat Detector" or "Single- and/or Multiple-Station Heat Detector Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Single- and Multiple-station Smoke Alarms (UTGT)

USE

This category covers single- and multiple-station smoke alarms intended to be employed in indoor locations where sensitivity testing and maintenance of alarms, per section 10.4.4 of ANSI/NFPA 72, "National Fire Alarm Code" (2007), is required by code, Authorities Having Jurisdiction, or other requirement.

This category also covers single- and multiple-station smoke alarms that have been performance tested to a minimum 10-year extended battery life under normal ambient conditions. Unless otherwise noted in the individual certifications, the alarms are intended for flush-mounted installation only, and are not intended for use on surface-mounted boxes.

Single- and Multiple-station Smoke Alarms (UTGT)—Continued

This category also covers supplementary devices and accessories for use with these units, such as a remote horn. These products are identified in the individual certifications.

This category also covers single- and multiple-station smoke alarms and accessories that are capable of receiving in-service firmware revisions. The approved firmware release levels are identified in the individual certifications. The products provide a means for identifying the current firmware version of the unit.

ALARM TYPES

Single Station — Self-contained units that incorporate a smoke chamber, an optional heat detector, and related electrical components to initiate an audible alarm signal from the unit when abnormal smoke or heat (when a supplementary heat detector is provided) actuates the unit. These devices may be energized from a commercial power-supply source by means of permanent wiring in accordance with ANSI/NFPA 70, "National Electrical Code," flexible power-supply cord, use of limited-energy cable or equivalent wiring connected to the output of a suitable Class 2 power supply, or by one or more batteries.

Where a battery is employed as the main supply, its depletion below the level at which an alarm signal would be obtained is indicated by a distinctive audible trouble signal which persists for at least seven days.

Multiple Station — Similar to single-station units but provided with leads or terminals (or integral RF transmitter/receiver units) to permit the interconnection of single-station units so that actuation of any one unit results in actuation of the audible alarms of all units. The installation instructions (manual) indicate the maximum number of units that can be interconnected.

Refer to Chapter 11 of ANSI/NFPA 72 and the instruction manual provided with each smoke alarm for installation data. ANSI/NFPA 72 includes installation requirements of fire warning equipment in family living units. This is intended to cover living areas only and not common usage areas of multifamily buildings such as corridors, lobbies, stairwells, etc.

Travel Alarm — Consists of a battery-operated smoke alarm provided with a mounting bracket for top of door mounting only. May also consist of a battery-operated single-station smoke alarm with the addition of a mounting bracket. The difference is indicated in the UL Certification Mark.

Alarm for Recreational Vehicles — ANSI/UL 217, "Single and Multiple Station Smoke Alarms," applies, except more stringent environmental tests are conducted.

Alarm for Recreational Boats — ANSI/UL 217 applies, except more stringent environmental tests are conducted.

PRODUCT IDENTITY

One or more of the following product identities appears on the product:

- Multiple-station Smoke Alarm
- Multiple-station Smoke Alarm – Also Suitable as a Commercial Residential Multiple-station Smoke Alarm
- Multiple-station Smoke Alarm – Also Suitable as a Multiple-station Carbon Monoxide Alarm
- Single- and/or Multiple-station Smoke Alarm
- Single- and/or Multiple-station Smoke Alarm – Also Suitable as a Single- and/or Multiple-station Carbon Monoxide Alarm
- Single- and/or Multiple-station Smoke Alarm Accessory
- Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit (for products where the word "SECURITY" is included in the Certification Mark)
- Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit, Home Health Care Control Unit, and Signal Appliance Control Unit (for products where the word "SECURITY" is included in the Certification Mark)
- Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit Accessory, Personal Call Unit, and Signal Appliance Environment Transmitter (for products where the word "SECURITY" is included in the Certification Mark)
- Single-station Smoke Alarm
- Single-station Smoke Alarm – Also Suitable as a Commercial Residential Smoke Alarm
- Single-station Smoke Alarm – Also Suitable as a Single-station Carbon Monoxide Alarm
- Single-station Smoke Alarm – Also Suitable as a Travel Smoke Alarm
- Single-station Smoke Alarm – Also Suitable for Use in Recreational Boats
- Single-station Smoke Alarm – Also Suitable for Use in Recreational Vehicles
- Single-station Smoke Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit (for products where the word "SECURITY" is included in the Certification Mark)
- Single-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Alarm Unit (for products where the word "SECURITY" is included in the Certification Mark)
- Single-station Smoke Alarm and Household Burglar Alarm Unit (for

Single- and Multiple-station Smoke Alarms (UTGT)—Continued

products where the word "SECURITY" is included in the Certification Mark)

Single-station Smoke and/or Carbon Monoxide Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit (for products where the word "SECURITY" is included in the Certification Mark)

Travel Smoke Alarm

Any of the preceding product names may include "for the Hearing Impaired" for products so identified in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Fire Alarm Devices, Single and Multiple Station, and Accessories (UTER), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 217, "Single and Multiple Station Smoke Alarms."

Products in this category marked "For The Hearing Impaired" have additionally been investigated to ANSI/UL 1971, "Signaling Devices for the Hearing Impaired."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

For products additionally investigated with respect to security applications, the word "SECURITY" is included in the Certification Mark.

Alternate UL Mark

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names as appropriate:

- "Single-station Smoke Alarm"
- "Multiple-station Smoke Alarm"
- "Single- and/or Multiple-station Smoke Alarm"
- "Single- and/or Multiple-station Smoke Alarm Accessory"
- "Travel Smoke Alarm"
- "Single-station Smoke Alarm – Also Suitable as a Travel Smoke Alarm"
- "Single-station Smoke Alarm – Also Suitable for Use in Recreational Vehicles"
- "Single-station Smoke Alarm – Also Suitable for Use in Recreational Boats"
- "Single-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglary Alarm Unit"
- "Single-station Smoke Alarm – Also Suitable as a Single-station Carbon Monoxide Alarm"
- "Multiple-station Smoke Alarm – Also Suitable as a Multiple-station Carbon Monoxide Alarm"
- "Single- and/or Multiple-station Smoke Alarm – Also Suitable as a Single- and/or Multiple-station Carbon Monoxide Alarm"
- "Single-station Smoke Alarm – Also Suitable as a Commercial Residential Smoke Alarm"
- "Multiple-station Smoke Alarm – Also Suitable as a Commercial Residential Multiple-station Smoke Alarm"

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is one of the following:

- "Single-station Smoke Alarm and Household Burglar Alarm Unit"
- "Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit"
- "Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit, Home Health Care Control Unit, and Signal Appliance Control Unit"
- "Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit Accessory, Personal Call Unit, and Signal Appliance Environment Transmitter"
- "Single-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglary Alarm Unit"
- "Single-station Smoke Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit"
- "Single-station Smoke and/or Carbon Monoxide Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit"

Any of the preceding product names may include "for the Hearing Impaired" for products so identified in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

Single- and Multiple-station Smoke Alarms (UTGT)—Continued

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAT-ACTUATED DEVICES FOR SPECIAL APPLICATION (UTHV)

USE AND INSTALLATION

This category covers fixed-temperature, heat-actuated-type detectors employing a special construction different from conventional thermostats and designed to detect an abnormal increase in air temperature.

These detectors are intended to be installed adjacent to the equipment being protected as identified in the installation instructions, and in accordance with the Authority Having Jurisdiction and ANSI/NFPA 70, "National Electrical Code," or other NFPA Standards that may apply, such as for extinguishing system applications. The temperature rating of the detector should be taken into consideration with regard to installation in the ambient temperature of the equipment to be protected under operating conditions to guard against false alarms. The detectors are intended to be connected to the initiating device circuits of certified control units that provide audible alarm signals or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Heat Actuated Device for Special Application," "Control Unit for Special Application" or "Control Unit Accessory for Special Application."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 521, "Heat Detectors for Fire Protective Signaling Systems."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

**Alternate UL Mark
UL MARK**

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- F – Fire Alarm Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD FIRE-WARNING SYSTEM UNITS (UTLQ)

This category covers the individual units that are interconnected to form an electrically-operated household fire-warning system. These units include a main control unit (with integral or separate power supply) and related accessories intended for connection to the control unit.

Additional equipment and materials, such as bells, horns, heat detectors, smoke detectors, and limited-energy fire detector circuit wiring, may be required in various applications to complete a system. Such products are covered under Audible-signal Appliances (ULS2), Smoke-automatic Fire Detectors (UROX), Heat-automatic Fire Detectors (UQGS) and Fire Alarm Devices, Single and Multiple Station, and Accessories (UTER).

Household Fire-warning System Units (UTLQ)—Continued

The units comprising a system are intended to be installed in accordance with the applicable requirements of Chapter 2 of ANSI/NFPA 72, "National Fire Alarm Code." Authorities Having Jurisdiction should be notified of the installation.

At least one smoke detector is required to be provided in a household fire-warning system. The smoke detector can be either electrically wired to and operated from the control unit, or be a separately-operated device, such as an electrically-operated single-station fire alarm device.

An installation drawing and/or detailed instructions are employed as the controlling factor to assure proper installation and interconnection among units. This material may be attached to the control unit, provided detached, or included as part of an instruction booklet.

An instruction booklet illustrating typical installation layouts, operation, maintenance, servicing and test procedures is supplied with the main control unit. Printed information for a household emergency evacuation plan may be separate or included as part of the booklet.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Control Units and Accessories, Household System Type (UTOU)

USE AND INSTALLATION

This category covers control units and accessories intended to be used as part of a household fire-warning system.

Control Unit — Consists of a unit assembly of electrical parts having provision for connection of a power supply, signal-actuating devices (thermostats, smoke detectors, switches, etc.), and signal-indicating devices (bells, horns, etc.).

Combination Control Unit — A control unit may additionally include circuit facilities for connection to burglar-alarm devices to form a combination fire-burglary control unit. In such a combination unit the fire-alarm signal takes precedence over the burglar-alarm signal and a distinction between alarm signals is required. A common trouble signal may be employed for both.

Modular Control or Combination Unit — A control unit may be pre-wired at the factory or assembled from readily installed modules. A certified burglary module can be added after the unit is installed to expand the system capability. The installation diagram indicates the type and number of modules that can be employed in a control unit.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Household" or "Residential" and the specific use description as indicated in the individual certifications.

PRODUCT IDENTITY

One or more of the following product identities appears on the product:

- Fire Alarm and Security Equipment (for products where the word "SECURITY" is included in the Certification Mark)
- Fire Alarm and Security Equipment Subassembly (for products where the word "SECURITY" is included in the Certification Mark)
- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling and Information Technology or Telephone categories. When applicable, the product identity may include "and General Signaling," "and Emergency Signaling," "and Information Technology" or "and Telephone," as appropriate (e.g., Fire Alarm and Telephone Equipment).

The product identities may be abbreviated as follows:

- Type E (for Emergency Signaling Equipment)
- Type E Subassembly (for Emergency Signaling Equipment Subassembly)
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)
- Type IT (for Information Technology Equipment)
- Type IT Subassembly (for Information Technology Equipment Subassembly)
- Type S (for Security Equipment)
- Type S Subassembly (for Security Equipment Subassembly)
- Type T (for Telephone Equipment)
- Type T Subassembly (for Telephone Equipment Subassembly)

Where model numbers are indicated in the individual certifications, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

ADDITIONAL INFORMATION

PRODUCT CATEGORIES BY CATEGORY CODE

Control Units and Accessories, Household System Type (UTOU)—Continued

For additional information, see Household Fire-warning System Units (UTLQ), Signal and Fire Alarm Equipment and Services (SYK) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 985, "Household Fire-Warning System Units." Some products covered under this category have also been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010), "Control Panel Standard – Features for False Alarm Reduction." See Control Panels, SIA False Alarm Reduction (AMTB).

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

For products additionally investigated with respect to security applications, the word "SECURITY" is included in the Certification Mark.

Products that have also been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010) are marked with one of the following statements:

- ALSO CERTIFIED TO ANSI/SIA CP-01 (2000)
- ALSO CERTIFIED TO ANSI/SIA CP-01 (2007)
- ALSO CERTIFIED TO ANSI/SIA CP-01 (2010)

Alternate UL Mark

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Information Technology or Telephone categories. When applicable, the product name may include "and General Signaling," "and Emergency Signaling," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- S – Security Equipment
- F – Fire Alarm Equipment
- G – General Signaling Equipment
- E – Emergency Signaling Equipment
- IT – Information Technology Equipment
- T – Telephone Equipment

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and one of the following statements as appropriate:

- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2000
- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2007
- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2010

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER-SUPPLY UNITS (UTRZ)

USE

This category covers power-supply units intended for application as components of fire-protective signaling systems.

PRODUCT MARKINGS

Power-supply Units (UTRZ)—Continued

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual certifications.

PRODUCT IDENTITY

One or more of the following product identities appears on the product:

- Fire Alarm and Security Equipment (for products where the word "SECURITY" is included in the Certification Mark)
- Fire Alarm and Security Equipment Subassembly (for products where the word "SECURITY" is included in the Certification Mark)
- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product identity may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., Fire Alarm and Telephone Equipment).

The product identities may be abbreviated as follows:

- Type E (for Emergency Signaling Equipment)
- Type E Subassembly (for Emergency Signaling Equipment Subassembly)
- Type EM (for Enclosed Energy Management Equipment)
- Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPEAKERS AND AMPLIFIERS FOR FIRE-PROTECTIVE SIGNALING SYSTEMS (UUMW)

USE AND INSTALLATION

This category covers speakers, amplifiers and their accessories investigated for use in fire alarm and/or emergency communication systems.

Speakers have been investigated for audible output of 75dBA or greater measured at 10 ft, when powered from a source of pink noise over a range of 400 – 4000 Hz. The units are marked with a minimum audibility rating.

Accessories, such as enclosures, have been investigated with respect to both mechanical and acoustical consideration when used with speakers specified in the individual certifications.

Where a certified product is formed by the assembly of two or more parts and all parts are not provided as a single package, the specific parts are identified in the individual certifications and each part bears a separate Certification Mark. The marking on each part references installation instructions that show assembly and installation of the parts to form a certified product.

Amplifiers have been investigated with respect to specified input/output parameters in a variety of tests, including harmonic distortion. These products are not to be confused with amplifiers tested as elements of control unit adjunct systems for personnel emergency relocation and evacuation; see Control Unit Accessories, System (UOXX). Amplifiers used in adjunct systems are suitable for use only in specified configurations.

All products covered under this category are intended for indoor use only, unless otherwise specifically identified as suitable for outdoor use by markings on the product and in the individual certifications.

Speakers and/or amplifiers and their accessories that have been investigated for mounting in air-handling spaces are specifically identified by markings on the product and in the individual certifications. Installation details are shown on the product or are provided in a separate installation document provided with the product and referenced in the marking on the product.

PRODUCT MARKINGS

Each product is marked to indicate its intended use as indicated in the individual certifications.

PRODUCT IDENTITY

One or more of the following product identities appears on the product:

- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling categories. When applicable, the product identity may include "and General Signaling," as appropriate (e.g., Fire Alarm and General Signaling Equipment).

The product identities may be abbreviated as follows:

- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1480, "Speakers for Fire Protective Signaling Systems," and UL 1711, "Amplifiers for Fire Protective Signaling Systems."

Speakers and Amplifiers for Fire-protective Signaling Systems (UUMW)—Continued

The basic standard used to investigate nonmetallic materials of products marked suitable for use in air-handling spaces in this category is UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the product name may include "and General Signaling," as appropriate (e.g., "Fire Alarm and General Signaling Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- F – Fire Alarm Equipment
- G – General Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES FOR USE IN HAZARDOUS LOCATIONS (SYMA)

GENERAL

This category covers equipment designed for the detection, initiation, notification and control of signals indicative of fire, supervisory, watchman, releasing operation, and the control of the flow of smoke.

This category also covers service companies who are capable of certifying systems that comply with nationally recognized installation standards.

This equipment is intended to be installed, maintained, and operated as system arrangements in accordance with:

- ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems"
- ANSI/NFPA 12A, "Halon 1301 Fire Extinguishing Systems"
- ANSI/NFPA 13, "Installation of Sprinkler Systems"
- ANSI/NFPA 15, "Water Spray Fixed Systems for Fire Protection"
- ANSI/NFPA 16, "Installation of Foam-Water Sprinkler and Foam-Water Spray Systems"
- ANSI/NFPA 17, "Dry Chemical Extinguishing Systems"
- ANSI/NFPA 17A, "Wet Chemical Extinguishing Systems"
- ANSI/NFPA 70, "National Electrical Code"
- ANSI/NFPA 72, "National Fire Alarm and Signaling Code"

Users of this equipment should consult Authorities Having Jurisdiction (AHJ) concerning the particular types to be used, number and location of appliances, character and installation of wiring, methods to be followed in the receipt and disposition of signals, keeping of records, rendering of reports, and all other details having a bearing on adequate installation, maintenance and use of the system to be employed.

Certified equipment is subjected to investigation to determine its suitability for its intended service and for installation, maintenance, and use in conformity with the applicable NFPA Standards, with particular regard to design and construction, practicability of application and reliability of performance in addition to the possible electrical hazards involved in its use.

A complete system is considered to be a combination of interrelated signal-initiating devices, signal-transmitting devices, signal-notification

PRODUCT CATEGORIES BY CATEGORY CODE

appliances and control unit installed in accordance with regulations enforced by the AHJ who determines the suitability of the installation for its particular application. The certification indicates that wiring diagrams have been submitted with the equipment, which provide details for interconnecting it to other interrelated devices for the intended application. The interconnection details are shown on the equipment or are in a separate installation document provided with the equipment and referenced in the marking on the equipment by drawing number and issue date and/or revision level.

Equipment may be used in different combinations to form a system. All certified equipment forming the system may be of one manufacture or of different manufactures. The installation wiring diagram provided as a part of the certified equipment should be consulted for specific details.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DETECTORS, AUTOMATIC FIRE FOR USE IN HAZARDOUS LOCATIONS (SYNN)

GENERAL

This category covers individual devices or prescribed combinations of devices designed to detect flame, heat, smoke, or combustion gases resulting from a fire and to automatically operate electrical signaling contacts. The signaling contacts may be integral parts of an individual device or parts of a separate device to which the detecting element is connected as an extended component.

The signaling contacts of the detector are intended to be connected to the circuit conductors of fire protective signaling systems recognized by the National Fire Protection Association Standards, so that the fire alarm signal initiated by the detector will be indicated by the system.

The type of system (central station, proprietary, auxiliary, remote station or local) with which the detector can be used depends upon the design of the signaling circuit to which the detector contacts are intended to be connected. A detector may have noncoded signaling contacts connected directly to the actuating circuit of system control unit or to the actuating circuit of an electrically operated transmitter which will transmit coded signals over the signaling line circuit of a local, auxiliary, proprietary, remote station, or central station system.

The wiring diagram of the transmitter or system control unit with which the detector is used will indicate the circuit application of the detector.

A combination-type detector depends upon two or more related but separate pieces of equipment which are designed to be installed together so as to form a complete detector.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Smoke-automatic Fire Detectors for Use in Hazardous Locations (SYNR)

GENERAL

This category covers detecting combinations designed to detect smoke particles. Smoke detectors may or may not be designed to be connected to fire alarm system control units (see APPLICATIONS below).

A heat detector and/or an audible-signaling appliance may be provided integral with the detector.

The primary function of duct detectors is to shut down the blowers and/or dampers of air conditioning and ventilating systems in an attempt to prevent a possible panic and smoke damage from distribution of smoke. Duct detectors are not intended as a substitute for open-area protection.

The level of toxicity produced by the combustibles at which smoke detectors actuate has not been investigated.

DETECTOR TYPES

Photoelectric (P) — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

Ionization (I) — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

Combination Photoelectric/Ionization (P/I) — Employs both principles of detection in one unit.

Smoke-automatic Fire Detectors for Use in Hazardous Locations (SYNR)—Continued

Projected Beam (PB) — A light beam is projected across the space of area to be protected.

Air Sampling (AS) — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air is analyzed for fire products.

APPLICATIONS

Open-area Protection (OAP) — Requires detector connection to a compatible system control unit for operation.

Releasing Service (RS) — Intended for detector connection only to releasing devices, such as electromagnetic door holders, fire dampers, etc.

Open-area Protection with Releasing Service (OAP/RS) — Incorporates supplementary switching contacts for additional connection to releasing devices.

Duct Detector [D (ST)] — Intended for installation on the side of a duct. Employs sampling tubes that extend into the duct.

Duct Detector [D (I)] — For installation inside a duct.

COMPATIBILITY WITH CONTROL UNITS

Smoke detectors for open-area protection are intended to be connected to the initiating device circuit of a fire alarm system control unit.

Multiple-wire detectors, employing power-supply terminals or leads that do not obtain power from the initiating-device circuit of a system control unit, are compatible with the initiating device circuits of any certified system control unit if (1) failure of the power to the detector is supervised at the control unit, and (2) the smoke detector is powered from a "Regulated" power-supply output, or a "Special Application" power-supply output for which the voltage outputs have been investigated. Compatible models for "Special Application" outputs are indicated on the installation wiring diagram of the control unit and/or detectors.

Two-wire detectors, whose power-supply terminals or leads are the same as the signaling terminals, and obtain power from the initiating-device circuit of a system control unit, are investigated for compatibility either by test or a review of the circuit parameters of both the detector and control unit. Certification is restricted only to those control units with which such an investigation was made. Interconnection limitations and compatible models are indicated on the installation wiring diagram of control unit and/or detectors.

INSTALLATION

Refer to ANSI/NFPA 70, "National Electrical Code," ANSI/NFPA 72, "National Fire Alarm and Signaling Code," and ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," for installation, maintenance, and testing guidelines.

Spacings — Although there are no assigned spacings to these detectors, test fires, using the maximum amount of combustible for the risk involved, may be employed. See ANSI/NFPA 72 for additional guidelines.

Environmental Considerations — Open-area detectors are intended for indoor use only where normal ceiling temperatures (max 37.8°C (100°F)) prevail. Care should be used that detectors are not installed in areas where conditions may cause unwanted (false) alarms.

Duct detectors are intended to be installed in ducts of heating, ventilating, and air conditioning systems where temperatures at the detector do not exceed 37.8°C (100°F).

Ionization detectors should not be used in an environment of high-level radiation unless tests in the actual environment have shown that the radiation will not interfere with operation of the detectors.

Effect of Velocity — The velocities indicated in the individual certifications are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. The performance of photoelectric-type detectors is not affected by velocity. Velocity limits for duct detectors are based on response to fire tests in ANSI/UL 268A, "Smoke Detectors for Duct Application."

Stability Test — In view of the innumerable environmental conditions that exist in the field, it is recommended that the stability of detectors be monitored prior to connection to a fire alarm system for at least three months or more to screen out locations of detectors where unwanted (false) alarms may occur. Relocation of the detectors, use of a detector with a different principle of operation, or a change in the sensitivity setting where permitted in the marking of the detector may be required.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of one of the following:

For **nonseparable heads and bases**:

1. Smoke Detector (+) for Open-area Protection
2. Smoke Detector (+) for Open-area Protection. Also Suitable for Releasing-device Service.
3. Smoke Detector (+) for Releasing-device Service
4. Smoke Detector (+) for Duct Application

For **separable heads**:

1. Smoke Detector Head (+) for Use with a (*) UL-certified Base

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES
FOR USE IN HAZARDOUS LOCATIONS (SYMA)**

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES FOR
USE IN HAZARDOUS LOCATIONS (SYMA)**

Smoke-automatic Fire Detectors for Use in Hazardous Locations (SYNR)—*Continued*

Smoke-automatic Fire Detectors for Use in Hazardous Locations (SYNR)—*Continued*

2. Smoke Detector Head (+) for Open-area Protection When Used with a (*) UL-certified Base
3. Smoke Detector Head (+) for Open-area Protection When Used with a (*) UL-certified Base. Also Suitable for Duct Application.
4. Smoke Detector Head (+) for Open-area Protection When Used with a (*) UL-certified Base. Also Suitable for Releasing-device Service.
5. Smoke Detector Head (+) for Releasing-device Service When Used with a (*) UL-certified Base
6. Smoke Detector Head (+) for Duct Application When Used with a (*) UL-certified Base
7. Smoke Detector Head When Used with a (*) UL-certified Smoke Duct Detector Housing

Where model numbers are indicated in the individual certifications, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

For **separable bases and duct housing:**

1. Detector Base (+) for Use with a (*) UL-certified Head
2. Detector Base (+) for Open-area Protection When Used with a (*) UL-certified Head
3. Detector Base (+) for Open-area Protection When Used with a (*) UL-certified Head. Also Suitable for Duct Application.
4. Detector Base (+) for Open-area Protection When Used with a (*) UL-certified Head. Also Suitable for Releasing-device Service.
5. Detector Base (+) for Open-area Protection When Used with a (*) UL-certified Head. Also Suitable for Releasing-device Service and Duct Application.
6. Detector Base (+) for Releasing-device Service When Used with a (*) UL-certified Head
7. Smoke-Duct Detector Housing for Use with (*) UL-certified Head

**Smoke Detectors for Special Applications for Use
in Hazardous Locations (SYNT)**

USE AND INSTALLATION

This category covers smoke-automatic fire detectors employing a special construction different from conventional detectors and designed to detect products of combustion in a specific location. These detectors are not intended as a substitute for open-area protection.

These detectors are intended to be installed in accordance with the manufacturer's installation instructions, in a manner acceptable to the Authority Having Jurisdiction and in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/NFPA 72, "National Fire Alarm and Signaling Code," or other NFPA Standards that may apply, such as for extinguishing system applications. The sensitivity rating of the detector should be taken into consideration with regard to installation in an area to be protected under operating conditions to guard against false alarms. The detectors may be connected to the initiating-device circuits of certified control units that provide audible-alarm signals, or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

Effect of Velocity — The velocities indicated in the individual certifications are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. Velocity limits for duct detectors are based on response to fire tests in ANSI/UL 268A, "Smoke Detectors for Duct Application."

Detector Types

Photoelectric (P) — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

Ionization (I) — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

Combination Photoelectric/Ionization (P/I) — Employs both principles of detection in one unit.

Air Sampling (AS) — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air is analyzed for fire products.

Video Image Smoke Detector (VI) — Intended to detect the image of smoke from a fire in the area of view covered by a video camera.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Smoke Detector for Special Application" or "Smoke Detector Accessory for Special Application."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Fire Alarm Equipment for Use in Hazardous Locations
- Fire Alarm Equipment Subassembly for Use in Hazardous Locations
- Type F for Use in Hazardous Locations (for Fire Alarm Equipment)
- Type F Subassembly for Use in Hazardous Locations (for Fire Alarm Equipment Subassembly)

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

ADDITIONAL INFORMATION

For additional information, see Smoke-automatic Fire Detectors for Use in Hazardous Locations (SYNR), Detectors, Automatic Fire for Use in Hazardous Locations (SYNN), Signal and Fire Alarm Equipment and Services for Use in Hazardous Locations (SYMA) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standards used to investigate products in this category (with the exception of video image smoke detectors) are ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems," and ANSI/UL 268A, "Smoke Detectors for Duct Application."

For **separable system assemblies:**

1. Smoke Detector Projected Beam System Unit
 2. Smoke Detector Air Sampling System Unit
 3. Smoke Detector for Duct Application Subassembly
- + To be inserted when applicable: "with Integral Audible Signal," "with Integral Heat Detector" or "with Integral Audible Signal and Heat Detector"

* Company name or File No. (Exxxx)

Detectors marked with the designation "with Integral Audible Signal" include an audible-signaling appliance in the unit (head or base), which is energized under an alarm condition.

Detectors marked with the designation "with Integral Heat Detector" include a heat detector in the unit, which is connected internally to the smoke detector alarm circuit. Actuation of the heat detector results in the same alarm signal as obtained from the smoke detector.

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Fire Alarm Equipment for Use in Hazardous Locations
- Fire Alarm Equipment Subassembly for Use in Hazardous Locations
- Type F for Use in Hazardous Locations (for Fire Alarm Equipment)
- Type F Subassembly for Use in Hazardous Locations (for Fire Alarm Equipment Subassembly)

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

ADDITIONAL INFORMATION

For additional information, see Detectors, Automatic Fire for Use in Hazardous Locations (SYNN), Signal and Fire Alarm Equipment and Services for Use in Hazardous Locations (SYMA) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate open-area and releasing-service detectors in this category is ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems."

The basic unclassified locations standard used to investigate duct detectors in this category is ANSI/UL 268A, "Smoke Detectors for Duct Application."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

A two-Certification-Mark system is employed for separable detector heads and bases. This permits the separate shipment of bases and heads to facilitate installation and maintenance. The Certification Marks on the separable units, coupled with a marking to cross-reference the head and the base, identify the parts to be used together to form a complete detector assembly.

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**496 SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES
FOR USE IN HAZARDOUS LOCATIONS (SYMA)**

Smoke Detectors for Special Applications for Use in Hazardous Locations (SYNT)–Continued

The basic unclassified locations requirements used to investigate video image smoke detectors in this category are contained in UL Subject 268B, "Outline of Investigation for Video Image Smoke Detectors."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RELEASING DEVICE EQUIPMENT
FOR USE IN HAZARDOUS
LOCATIONS (TBCX)**

Releasing Devices with accessory equipment are designed to release operating weights or air or water under pressure in the functioning of fire protection and fire alarm equipment.

They are available in both heat responsive (automatic) and manual types. The heat responsive types may be had in either fixed temperature or rate-of-rise types or a combination of these two.

The heat responsive portions of releasing devices are integral parts of some patterns. In other patterns they are separate parts, such as air chambers which are mounted in the fire area and connected by small-bore tubing to the releasing device; or thermostatically operated electric switches (thermostats) mounted in the fire area and connected by an electric wiring circuit to the releasing device. Devices which have normally open contacts are listed as "Heat-Automatic Fire Detectors" and those which have normally closed contacts are listed as "Heat Detectors for Releasing Device Service."

Proper location and spacing of the auxiliary heat responsive devices (heat detectors, air chambers, tubing, etc.) involve consideration of service conditions throughout the area to be protected - such as ceiling construction, subdivisions of areas (including closets, small rooms, etc.) normal temperatures, high temperatures (if existent), resulting from manufacturing processes or other causes and draft conditions. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations. Individual Listings should be consulted for details of spacing and locations of the heat responsive devices.

Authorities Having Jurisdiction should be consulted in all cases before installation of systems or devices.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HEAT DETECTORS FOR RELEASING
DEVICE SERVICE FOR USE IN HAZARDOUS
LOCATIONS (TBGR)**

GENERAL

This category covers heat detectors having normally closed circuit contacts used for thermo-responsive elements of releasing systems. They are intended to be installed in accordance with ANSI/NFPA 72, "National Fire Alarm Code."

These heat detectors have been investigated for indoor use only unless otherwise indicated in the individual certifications.

The operating principles included in the individual certifications are coded as follows:

- ROR – Rate of rise
- FT – Fixed temperature
- ROR-FT – Combination rate of rise and fixed temperature
- RC – Rate compensation

**RELEASING DEVICE EQUIPMENT FOR USE IN HAZARDOUS
LOCATIONS (TBCX)**

Heat Detectors for Releasing Device Service for Use in Hazardous Locations (TBGR)–Continued

PRODUCT IDENTITY

The following product identity appears on the product:
Heat Detector for Releasing Device Service for Use in Hazardous Locations

RELATED PRODUCTS

Heat detectors having normally open contacts are covered under Heat-automatic Fire Detectors for Use in Hazardous Locations (UIRV).

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment for Use in Hazardous Locations (TBCX) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heat Detector for Releasing Device Service for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RELEASING DEVICES FOR USE IN
HAZARDOUS LOCATIONS (TBJW)**

GENERAL

This category covers releasing devices intended for use in supporting and releasing loads in connection with automatic operating devices or systems where loads at release lever hook do not exceed those specified in the individual certifications.

This category also covers releasing devices intended for use as a means of releasing air or water under pressure from a piping system confining and conducting that pressure through pipes or tubing to operate any connected pressure-operated mechanism.

A releasing device and its associated detection system may be adjusted to compensate for more or less severe ambient temperature changes by different settings of the release, or by varying the size of the compensating vents in the system to increase or decrease the rate of built-up pressure caused by exposure to some given temperature rise. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations.

PRODUCT IDENTITY

The following product identity appears on the product:
Releasing Device for Use in Hazardous Locations

RELATED PRODUCTS

See Heat Detectors for Releasing Device Service for Use in Hazardous Locations (TBGR) and Heat-automatic Fire Detectors for Use in Hazardous Locations (UIRV).

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment for Use in Hazardous Locations (TBCX) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 864, "Control Units and Accessories for Fire Alarm Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Releasing Devices for Use in Hazardous Locations (TBJW)—*Continued*

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Releasing Device for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REPACKAGED ELECTRICAL CONSTRUCTION EQUIPMENT (TEOZ)

GENERAL

This category covers repackaged certified electrical construction equipment.

Required user instructions and ratings are marked on or packed with the smallest unit container in which the product is packaged.

Certified wire or cable that has been subjected to processing or respooling subsequent to its manufacture is covered under Processed Wire (ZKLU).

Lightning conductors, air terminals and fittings (see OVTZ) are intended for installation in certified lightning protection systems and are not eligible for repackaging.

Products under UL's Listed by Report Service may require special descriptions and recommended methods of installation and are not covered under this category.

PRODUCT IDENTITY

The appropriate product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are referenced in Repackaged Product Program Requirements at www.ul.com

UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Where applicable, these products are marked with information pertaining to the scope of the certification (e.g., "AS TO ELECTRIC SHOCK AND MECHANICAL HAZARDS ONLY," "IEEE C37.59").

Alternate UL Mark

The Listing or Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing or Classification and Follow-Up Service.

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name.

The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), a control number, the appropriate product name, and information pertaining to the scope of the Classification (e.g., "AS TO ELECTRIC SHOCK AND MECHANICAL INJURY," "IN ACCORDANCE WITH IEEE C37.59").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROBOTS AND ROBOTIC EQUIPMENT (TETZ)

GENERAL

ROBOTS AND ROBOTIC EQUIPMENT (TETZ)

This category covers robots, integrated work cells, programmable production equipment, remote sensing equipment, robotic servo power supplies, and similar equipment.

This equipment has been investigated with respect to risks of electric shock, fire and injury to persons.

PRODUCT IDENTITY

The following product identity appears on the product:

Robot

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1740, "Robots and Robotic Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Robot," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROTARY AUTOMATIC PRODUCT-FILLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (TONI)

GENERAL

This category covers equipment for automatically filling fluids into aerosol cans, bottles and similar containers.

PRODUCT IDENTITY

One of the following product identities appears on the product:

Product-filling Equipment for Use in Hazardous Locations

Rotary Automatic Product-filling Equipment for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rotary Automatic Product Filling Equipment for Hazardous Locations" or "Product Filling Equipment for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SANITATION, FOOD SERVICE EQUIPMENT (TSQS)

COMMERCIAL COOKING, RETHERMALIZATION AND POWERED HOT-FOOD-HOLDING AND -TRANSPORT EQUIPMENT (TSQT)

USE

This category covers cooking and hot-food-holding equipment, including brewers, steam tables, griddles, broilers, ovens, fryers, food warmers, and similar equipment intended for commercial use.

PRODUCT MARKINGS

Equipment may be marked with use limitations or may provide guidance on intended application.

Rethermalization equipment is provided with a marking that specifies the maximum capacity of the unit.

Equipment provided with a security package for installation in areas where security may be a concern is marked "Intended for use only in environments where security is a concern, such as correctional facilities, mental health facilities, or some schools."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Cooking Equipment
- Hot-food-storage Equipment

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Electric equipment and warming and serving equipment intended for commercial use and investigated to UL Safety Standards is covered under Commercial Cooking Appliances (KNGT) and Custom-built Food-service Equipment (KNNS).

Gas-fired food service equipment is covered under Gas-fired Food Service Equipment (LGQX).

See Lead Content Verification of Products in Contact with Potable Water (QNVB).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 4, "Commercial Cooking, Rethermalization and Hot Food Holding and Transport Equipment."

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SANITATION," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

NSF/ANSI 4

For those products which are also certified by UL under another category, the statement "NSF/ANSI 4" is included on the product.

Alternate UL Mark

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

[PRODUCT IDENTITY*]

NSF/ANSI 4

Control No.

* COOKING EQUIPMENT or HOT FOOD STORAGE EQUIPMENT, or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by UL under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 4" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FOOD EQUIPMENT (TSQU)

USE

Food Equipment (TSQU)—Continued

This category covers equipment for handling and processing food in food-service applications. Products covered include tables, counters, hoods, shelves, cutting boards, wheels, casters, food shields, sinks and utensils intended for commercial use.

This category also covers custom equipment designed and manufactured for a specific installation or application. Specific types of custom equipment are identified in the individual certifications. They may contain components, design or performance features covered by other applicable NSF standards.

This category does not cover hybrid equipment (e.g., a food transport cabinet with the capability to both heat and refrigerate food) that is not custom equipment. Such equipment is covered by NSF/ANSI 169, "Special Purpose Food Equipment and Devices."

PRODUCT MARKINGS

Equipment provided with a security package for installation in areas where security may be a concern is marked "Intended for use only in environments where security is a concern, such as correctional facilities, mental health facilities, or some schools."

PRODUCT IDENTITY

One of the following product identities appears on the product:

- Fabricated Food-service Equipment
- Hotel Pan
- Custom Counter

Other product identities may be used as shown in the individual certifications.

RELATED PRODUCTS

Electric cooking equipment intended for commercial use and investigated to UL Safety Standards is covered under Commercial Cooking Appliances (KNGT) and Custom-built Food-service Equipment (KNNS).

Refrigerators and freezers intended for commercial use and investigated to UL Safety Standards are covered under Commercial Refrigerators and Freezers (SGKW).

Gas-fired food-service equipment is covered under Gas-fired Food-service Equipment (LGQX).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 2, "Food Equipment."

As appropriate, additional requirements for specific design and performance features are obtained from relevant NSF standards. These include but are not limited to:

- NSF/ANSI 4, "Commercial Cooking, Rethermalization, and Powered Hot Food Holding and Transport Equipment"
- NSF/ANSI 7, "Commercial Refrigerators and Freezers"

UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SANITATION," the geographic identifier(s), and a file number.

Additional Certification Markings

Products covered under this category are additionally marked with the following information:

NSF/ANSI 2

For those products which are also certified by UL under another category, the statement "NSF/ANSI 2" is included on the product.

Alternate UL Mark

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

FABRICATED FOOD SERVICE EQUIPMENT*

NSF/ANSI 2

Control No.

* or other appropriate product name as shown in the individual Classifications (e.g., HOTEL PAN, CUSTOM COUNTER)

For those products which are also Listed or Classified by UL under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 2" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL REFRIGERATORS AND STORAGE FREEZERS (TSQV)

GENERAL

This category covers refrigerators and storage freezers, or components for use in these units, intended for commercial use.

Equipment intended solely for storing and/or displaying certain types of products is required to have a permanently attached label indicating what the intended products are. These products include 1) packaged food products, except ice cream and frozen desserts; and 2) nonpotentially hazardous, bottled or canned food and beverage products (e.g., beverage coolers).

Refrigerated buffet units, refrigerated food preparation units, and similar open-top refrigeration equipment is required to have permanent labels indicating that the equipment is intended for use in rooms having an ambient temperature of 30°C (86°F) or less. Display cases, for example, units intended to be installed in the customer service area, and not in the kitchen, that have glass doors only, also have this marking.

Equipment storing potentially hazardous food or beverages (except ice cream and other frozen desserts) including open-top equipment has been subject to performance testing to verify storage temperatures and compressor run time.

Prefabricated walk-in and roll-in refrigerators and storage freezers are not required to be tested. Adequate performance of these units is assured through the proper determination of refrigeration equipment demands.

Unit coolers for installation in walk-in or reach-in refrigerators and storage freezers have been investigated for design, construction and materials only.

PRODUCT MARKINGS

Equipment intended solely for the storage and display of packaged food products (other than self-service display refrigerators or units intended solely for the storage and display of ice cream and other frozen desserts) is marked "This equipment is intended for the storage and display of packaged products only."
