

Responsible Sourcing Fire Safety Audits

UL helps clients assess key elements of fire and life safety in facilities across their supply chain.

Drawing from extensive industry knowledge and over 120 years of fire safety expertise, UL offers responsible sourcing fire safety audits for clients looking to efficiently assess and incorporate fire and life safety measures across their supply chain. With our global footprint and network of auditors, our standardized approach and reporting tool for fire safety audits allows clients to quickly identify areas of concern relating to fire and life safety in facilities.

Fire Safety Audits

Our responsible sourcing fire safety audits are based on a combination of select National Fire Protection Association (NFPA) codes and international standards as well as UL's social auditing methodology. These audits enable brands or retailers to gain valuable insight into potential fire and life safety concerns across a uniform assessment standard.

Conducted by social auditors trained on specific aspects of fire and life safety, this one to two auditor day assessment covers elements based on international minimum recommendations and best practices related to:

- Fire Prevention
- Fire Protection
- Emergency Egress, and
- Fire Management Systems

The responsible sourcing fire safety audit results in:

- A summary of observed findings that can be shared with the facility immediately.
- A detailed report focused on key findings based on international minimum recommendations on key elements of fire and life safety, photo evidence, and best practice recommendations that can be used to guide the corrective action and remediation process with facilities.

The audit process and final report provide clients valuable insight to better assess areas for improvement at the facility level related to fire and life safety.

Corrective and Preventative Action

Information from these audits can also be uploaded into our on-line corrective action system that easily manages and tracks improvements for clients. This system helps consolidate communication related to management system improvements; track and document closure of audit findings, and minimizes the administrative effort of managing the remediation corrective action process.

UL is a leading global provider of responsible sourcing auditing and advisory services, which include supply chain monitoring, research and program development, and training. UL's Responsible Sourcing team has the global footprint to provide services in several countries.
